

Figure 1: Energy profile of Côte d'Ivoire

Figure 2: Total energy production, (ktoe)

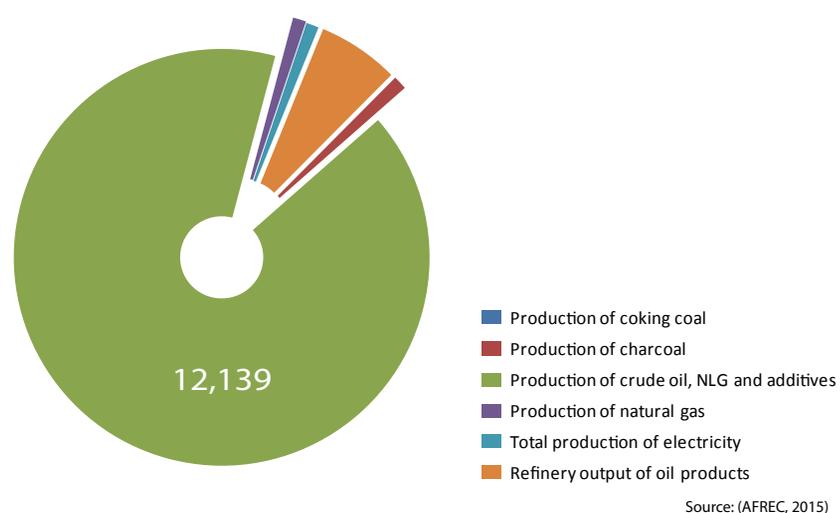

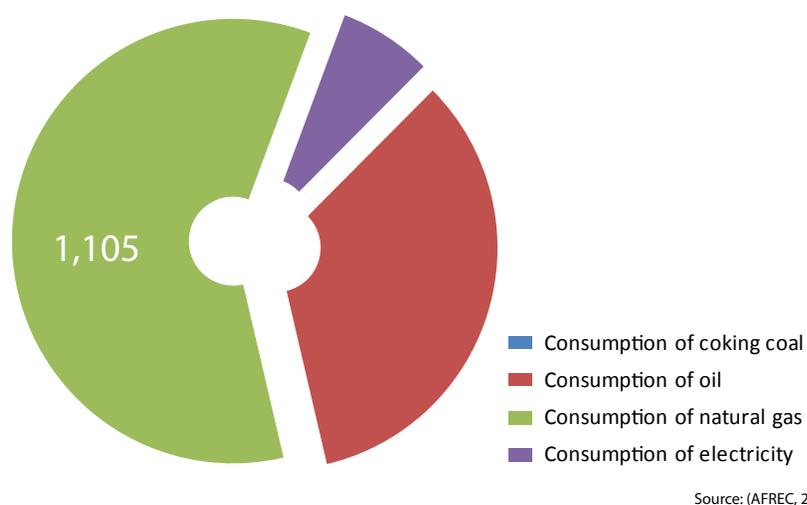

Figure 3: Total energy consumption, (ktoe)

Energy Consumption and Production

In 2013, Côte d'Ivoire had a population of 20.32 million (Table 1) (IEA, 2016). Energy is a growth industry in Côte d'Ivoire. The country is an important supplier of energy to the region due to the excess electricity it generates, and its reserves of natural gas and recent offshore finds of oil and natural gas. Electricity production in 2015 was 648 ktoe with 66.5 per cent produced from fossil fuels and 31 per cent from hydro sources. Final consumption of electricity in the same year was 774 ktoe with industry consuming 19.2 per cent and transport consuming 99 per cent of electricity produced (Table 2) (AFREC, 2015). Key consumption and production statistics are shown in Figures 2 and 3.

Table 1: Côte d'Ivoire's key indicators

Key indicators	Amount
Population (million)	20.32
GDP (billion 2005 USD)	21.93
CO ₂ emission (Mt of CO ₂)	8.68

Energy Resources

Biomass

As with most African countries, biomass is the most common energy source and it provides about 75 per cent of energy requirements, especially for domestic purposes and for small businesses. Fuel wood is mainly obtained from natural forests, savannah woodlands, bushland and tree plantations, among others. Forested land covers 32.7 per cent of the country (World Bank, 2015d), an area of about 6.38 million hectares. Agro-industrial residues, crops and plantations represent a readily available form of renewable energy and are already being used in some agro-businesses and sawmills (REEEP, 2012).

Biogas from household waste is being experimented with in Abidjan. The production of bioethanol using feedstock from maize, sugarcane and sweet sorghum is also being explored. It is estimated that in the northern part of Côte d'Ivoire, about 120 ktoe per year is available from bagasse (the fibrous byproducts of extracting sugarcane or sorghum juice) (REEEP, 2012).

Hydropower

Hydro and thermal generating plants provide all of Côte d'Ivoire's electricity, with hydro accounting for less than 50 per cent of the power generated.

By the end of 2011, there was 606 MW of installed hydropower capacity. Buyo, Kossou and Taabo are the main dams in Côte d'Ivoire with 165,174 and 210 MW of generating capacity, respectively. There are four other large sites that are still undeveloped. Their capacities range from 4 to 288 MW and there are various other small potential hydro sites that could also be developed (REEEP, 2012). In general, Côte d'Ivoire has a theoretical capacity of 46 TWh/annum with a technically exploitable potential of about 12.4 TWh (REEEP, 2012).

Table 2: Total energy statistics (ktoe)

Category	2000	2005	2010	2015 P
Production of coking coal	-	-	-	-
Production of charcoal	108	126	132	144
Production of crude oil, NLG and additives	12 757	11 294	14 264	12 139
Production of natural gas	0	50	94	138
Production of electricity from biofuels and waste	0	0	0	0

Net imports of electricity	23	36	24	5

- : Data not applicable

0 : Data not available

(P): Projected

(AFREC, 2015)

Oil and natural gas

Production of offshore oil started in 1980 and by the end of 2011, oil production was estimated at 11,720 thousand barrels (WEC, 2013). Most (86 per cent) of the oil and gas wells are located in shallow marine areas, 7 per cent are in deep offshore wells and 7 per cent are onshore. The proven petroleum reserves in 2005 were 100 million barrels.

Natural gas was initially discovered in Côte d'Ivoire in the 1980s, but development only started in 2005. The proven recoverable reserves at the end of 2011 was 28.3 bcm and production was 1.6 bcm (WEC, 2013).

Peat

The area of peatland is 725 km² (WEC, 2013).

Wind

The only available data on wind is compiled by the *Société d'Exploitation et de Développement Aéroportuaire, Aéronautique et Météorologique* (SODEXAM) for civil aviation purposes. Along

the coast, San Pedro in the west and Korhogo in the north have wind velocities above 6 m/s, while Bouake in the central region and Tabou on the western coast have wind speeds higher than 4 m/s.

Geothermal

The geological conditions point to some limited potential for geothermal energy, but no study has yet been undertaken (REEEP, 2012).

Solar

There is moderate potential for solar energy, ranging between 2.0 and 4.5 kWh/m²/day with a daily sunshine duration of 6 hours (REEEP, 2012). Many educational and health facilities in urban areas use solar for water heating. It is estimated that about 2 kW is needed to heat 150 litres of water. In rural areas, solar could help reduce or replace the amount of firewood used for water heating (REEEP, 2012).

Tracking progress towards sustainable energy for all (SE4All)

In Côte d'Ivoire, 55.8 per cent of the population has access to electricity: 29 per cent of rural areas are electrified compared with 88.1 per cent of urban areas (Table 3 and Figure 4) (World Bank, 2015); (World Bank, 2016). Access to modern fuels is low. In 2012, only 19.12 per cent were using non-solid fuels; 2 per cent of these are in rural areas and 35 per cent in urban areas (World Bank, 2015); (World Bank, 2016). The strategic plan 2013-2030 for the development of the electricity sector in Côte d'Ivoire aims to expand electricity production capacity, upgrade the way electricity is distributed throughout the country, enhance the use of more renewable energy sources and increase hydroelectric and thermal electricity generation. For instance, a new 275 MW dam is being built at Soubre and the CIRPEL and AZITO thermal power plants are being expanded.

The energy intensity (the ratio of the quantity of energy consumption per unit of economic output) was 9.7 MJ per US dollar (2005 dollars at PPP) in 2012, up from 4.9 MJ per US dollar in 1990. The compound annual growth rate (CAGR) between 2010 and 2012 was 9.56 (World Bank, 2015)

The share of renewable energy in the total final energy consumption (TFEC) has been declining from 80.2 per cent in 1990 to 74.4 in 2012. Traditional solid biofuels form the biggest share of renewable sources at 65.3 per cent of TFEC in 2012, while modern solid biofuels contributed 7.6 per cent and hydro only 1.5 per cent (World Bank, 2015). Renewable sources contributed 26.4 per cent share of electricity generation in 2012 (World Bank, 2015).

Table 3: Côte d'Ivoire's progress towards achieving SDG7 – Ensure access to affordable, reliable, sustainable and modern energy for all

Target	Indicators	2010	2011
Ensure universal access to modern energy, including electricity and cooking	Access to electricity (% of population)	58.9	
	% of population with primary reliance on non-solid fuels		
Double the rate of improvement of energy efficiency	GDP per unit of energy use (constant 2011 PPP \$ per kg of oil equivalent)	5.6	4.7
Double the share of renewable energy in the global energy mix	Percentage of total final consumption of energy from renewable sources		

Sources: (World Bank, 2015); (World Bank, 2016)

Figure 4: SDG indicators

Percentage of population with access to electricity	Access to non-solid fuel (% of population)	GDP per unit of energy use (PPP \$ per kg of oil equivalent) 2013	Renewable energy consumption (% of total final energy consumption), 2006-2011, 2012
55.8%	19.12%	5.0	74.4%

Kossou Dam, general view of water inlets, Côte d'Ivoire

Table 4: Cote d'Ivoire's institutional and legal framework

Basic Elements	Response
Presence of an Enabling Institutional Framework for sustainable energy development and services (Max 5 institutions) most critical ones	Ministry of Mines, Petroleum and Energy
Presence of a Functional Energy Regulator	National Authority for the Regulation of the Electricity Sector (ANARE)
Ownership of sectoral resources and markets (Electricity/ power market; liquid fuels and gas market)	Compangnie Ivoirienne d'Electriciti (CIE)
Level of participation in regional energy infrastructure (Power Pools) and institutional arrangements	West African Power Pool (WAPP)
Environment for Private Sector Participation	
Whether the Power Utility(ies) is/are vertically integrated or there is unbundling (list the Companies)	Énergie Électrique de Côte d'Ivoire (EECI)
Where oil and gas production exists, whether upstream services and operations are privatized or state-owned, or a mixture (extent) e.g., licensed private exploration and development companies)	Petroci Holding, with three subsidiaries: Petroci Exploration-Production which handles upstream gas and oil activities; Petroci Gaz, which is responsible for the natural gas sector; and Petroci Industries-Services which manages all other related services.
Extent to which Downstream services and operations are privatized or state-owned, or a mixture (extent)	
Presence of Functional (Feed in Tariffs) FIT systems	
Presence Functional IPPs and their contribution	IPPs include Azito Énergie, Compagnie Ivoirienne de Production d'Électricité (CIPREL), Aggreko and the natural gas producers (AFREN, Foxtrot, Canadian Natural Resources)
Legal, Policy and Strategy Frameworks	
Current enabling policies (including: RE; EE; private sector participation; & PPPs facilitation) (list 5 max) most critical ones	<ul style="list-style-type: none"> • Energy Master Plan 2013-2030 • Strategic Action Plan developed by the Ministry of Petroleum and Energy of Côte d'Ivoire.
Current enabling laws/pieces of legislation (including: RE; EE; private sector participation; & PPPs facilitation) – including electricity/grid codes & oil codes (5 max or yes/no) most critical ones	Electricity Code Law No. 2014-132 of 2014

This table was compiled with material from (REEEP, 2012)

Intended Nationally Determined Contributions (INDC) within the framework of the Paris climate Agreement

The government is conscious of its international obligations and in September 2015, submitted its Intended Nationally Determined Contributions (INDC) (Table 4). The INDC focuses on improving the share of renewables in the energy mix.

Institutional and Legal Framework

The Ministry of Mines, Petroleum and Energy is in charge of the energy sector. The energy regulator is the National Authority for the Regulation of the Electricity Sector (ANARE). The Energie Electrique de Côte d'Ivoire (EECI) is the sole generator, transmitter and distributor of electric energy. On a regional level, the country is a member of the West African Power Pool. The legal framework is provided by the Electricity Code No. 2014-132 of 2014. The Energy Master Plan 2013-2030 guides the development of the sector (Table 4).
