DECISION 1/13 – Notification Procedures for Transboundary Movement of waste

The Conference:

Recalling Article 6¹ of the Bamako convention on the ban of the import into Africa and the control of transboundary movement and management of hazardous wastes within Africa;

Further recalling Article 7² of this Convention;

Bearing in mind the annexes I, II, III, IVA and IVB of the Convention³;

Hereby:

1. **Endorses** on an interim basis the Notification Form and the Movement Document for the transboundary movement of waste annexed hereto (Annex I and Annex II respectively);
2. **Requests** Parties to meet their reporting obligations under the Bamako Convention using these forms;
3. **Instructs** the Legal and Technical Working Group (LTWG) to revise and amend the Notification Form and Movement Document for the transboundary movement of waste pursuant to article 6 and article 7 of the Bamako Convention for consideration at the next Conference of the Parties;
4. **Encourages** the Secretariat to identify necessary funds to hold a training workshop on Transboundary Movement and Notification Procedures for focal points, competent authorities and Dumpwatches.

¹ **Art. 6** establishes procedures for transboundary movement of waste to be followed by export, import and transit countries.

² Art.7 extends certain provisions of Art.6 to transboundary movement from a Party through States which are not Parties.

LIST OF HAZARDOUS CHARACTERISTICS

UN code Characteristics

Class*

1 H1 Explosive

An explosive substance or waste is a solid or liquid substance or waste (or mixture of substances or wastes) which is in itself capable by chemical reaction or producing gas at such a temperature and pressure and at such a speed as to cause damage to the surroundings.

* Corresponds to the hazardous classification system included in the United Nations Recommendations on the Transport of Dangerous Goods (ST/Secretary General/AC.10/1/Rev.5, United Nations, New York, 1988).

H3 Flammable liquids

The word "flammable" has the same meaning as "inflammable". Flammable liquids are liquids, or mixtures of liquids, or liquids containing solids in solution or suspension (for example paints, varnishes, lacquers, etc., but not including substances or wastes otherwise classified on account of their dangerous characteristics) which give off a flammable vapour at temperatures of not more than 60.5 degrees C, closed cup test, or not more than 65.6 degrees C, open-cup test. (Since the results of open-cup tests and of closed-cup tests are not strictly comparable and even individual results by the same test are often variable, regulations varying from the above figures to make allowance for such difference would be within the spirit of this definition).

4.1 H4.1 Flammable solids

Solids, or waste solids, other than those classed as explosives, which under conditions encountered in transport are readily combustible, or may cause or contribute to fire through friction.

4.2 H4.2 Substances or wastes liable to spontaneous combustion

Substances or wastes which are liable to spontaneous heating under normal conditions encountered in transport, or to heating up on contact with air, and being then liable to catch fire.

4.3 H4.3 Substances or wastes which, by interaction with water are liable to become spontaneously flammable or to give off flammable gases in dangerous quantities.

5.1 H5.1 Oxidizing

Substances or wastes which, while in themselves not necessarily combustible, may, generally by yielding oxygen, cause or contribute to the combustion of other materials.

5.2 H5.2 Organic peroxides

Organic substances or wastes which contain the bivalent-O-O-structure are thermally unstable substances which may undergo exothermic self-accelerating decomposition.

6.1 H6.1 Poisonous (Acute)

Substances or wastes liable either to cause death or serious injury or to harm human health if swallowed or inhaled or by skin contact.

6.2 H6.2 Infectious substances

Substances or wastes containing viable micro organisms or their toxins which are known or suspected to cause disease in animals or humans.

8 H8 Corrosives

Substances or wastes which, by chemical action, will cause severe damage when in contact with living tissue, or in the case of leakage, will materially damage, or even destroy other goods or the means of transport; they may also cause other hazards.

9 H10 Liberation of toxic gases in contact with air or water.

Substances or wastes which, by interaction with air or water, are liable to give off toxic gases in dangerous quantities.

9 H11 Toxic (Delayed or chronic)

Substances or wastes which, if they are inhaled or ingested or if they penetrate the skin, may involve delayed or chronic effects, including carcinogenicity.

9 H12 Exotoxic

Substances or wastes which if released present or may present immediate or delayed adverse impacts to the environment by means of bioaccumulation and/or toxic effects upon biotic systems.

9 H13 Capable, by any means, after disposal, of yielding another material, e.g., leachate, which possesses any of the characteristics listed above.
