GREEN TO GROW

An overview of a revenue generation approach to sustainable consumption and production (SCP) dissemination in Kenya

November 28 2019
SAG Regional Sector Meeting
on Sustainable Agriculture
UNEP

Switch Africa Green (phase 2)

Focus: Green Business Development

How: incentivizing Sustainable Consumption and Production practices to MSMEs along the **mango**, **dairy and coffee** food value chains in Kenya by means of a revenue generation dissemination approach.

Period: January 2018-January 2021

Grant: €1.271,000.00

Coffee – Mango – Dairy

The pathway...

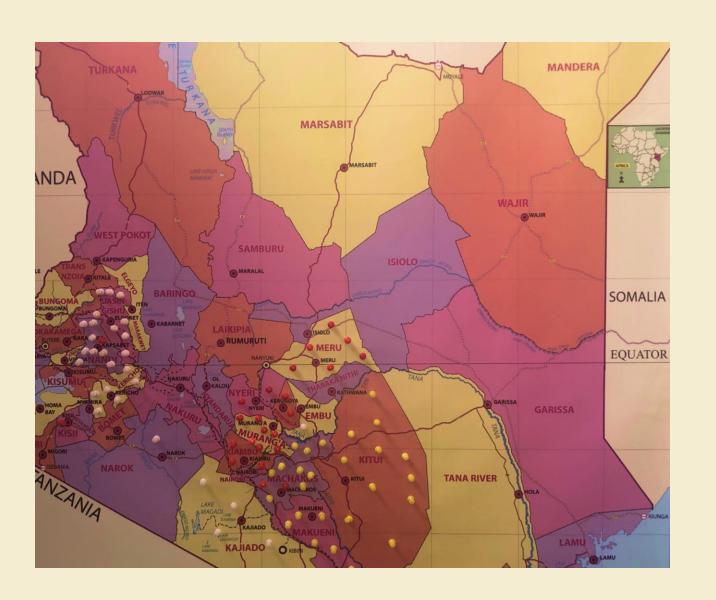

to SCP dissemination.

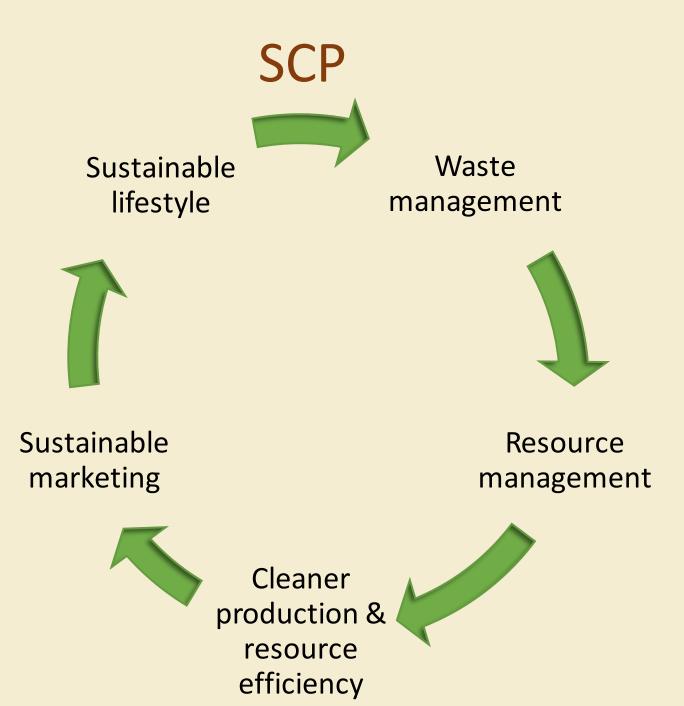

Green to Grow aims to reach

100 MSMEs through training activities

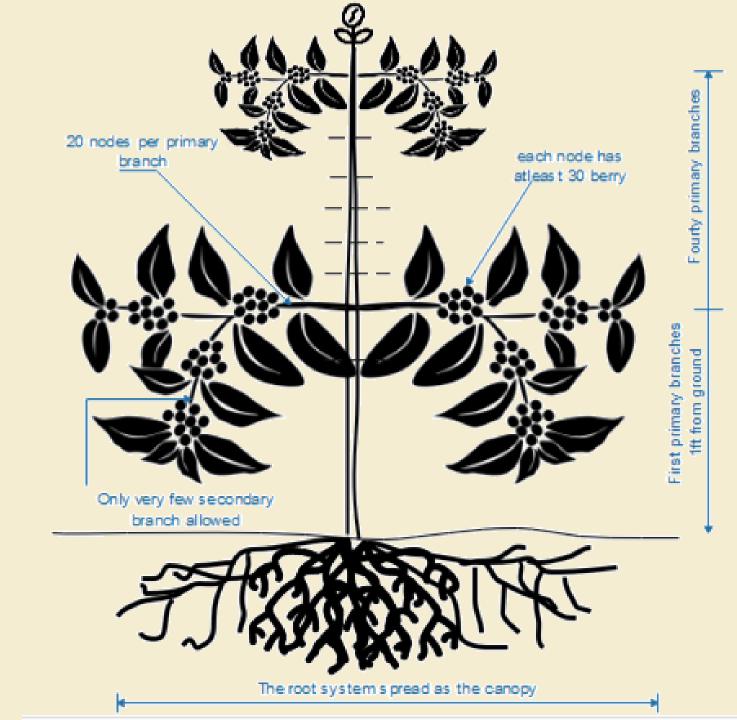

200 MSMEs through awareness raising activities

40 Member Based Organizations (MBOs) in Kenya, Ethiopia and Uganda

- Zero use of synthetic fertilizer
- Reduced use of pesticides and insecticides
- 100 % organic

Compost

- High nutrient content
- Boost coffee yield
- 100% Organic

Eco-Pulper

- Reduces Water use
- Reduces on carbon foot prints
- Daily processing rather than 3 days

Solar water pumping

renewable energy

Fruit fly trap

- Pest management approach
- Protein bait laced with toxicants to kill the female fruit fly
- Not harmful to people, animals and environment

Pruning

- Vigorous vegetative regrowth
- Restore productivity of old tree
- Multiplication of the mango stem borer

White washing

• done to treat mango tree stem infestation with termites.

Water harvesting pans and drip irrigation

Water conservation

Value addition

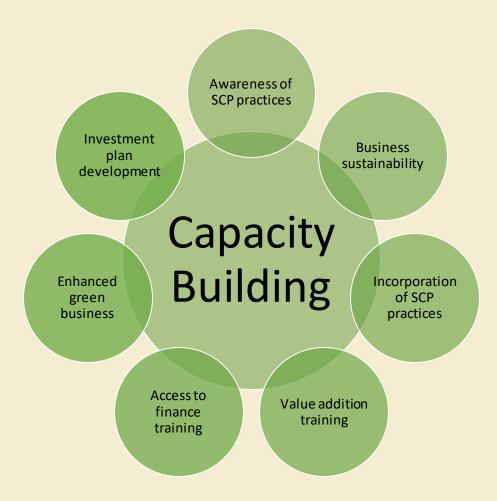

- Local market
- Increasing revenue stream
- Increasing the value chain branches

Coffee briquettes and charcoal

- Alternative energy
- Sustainable waste management
- Revenue stream

26 MSMEs from Machakos, Kitui and Makueni were taught sustainable consumption and production practices and technologies to process value-added products. These products will increase their profit margin and reduce post harvest losses and the environmental footprint of their businesses.

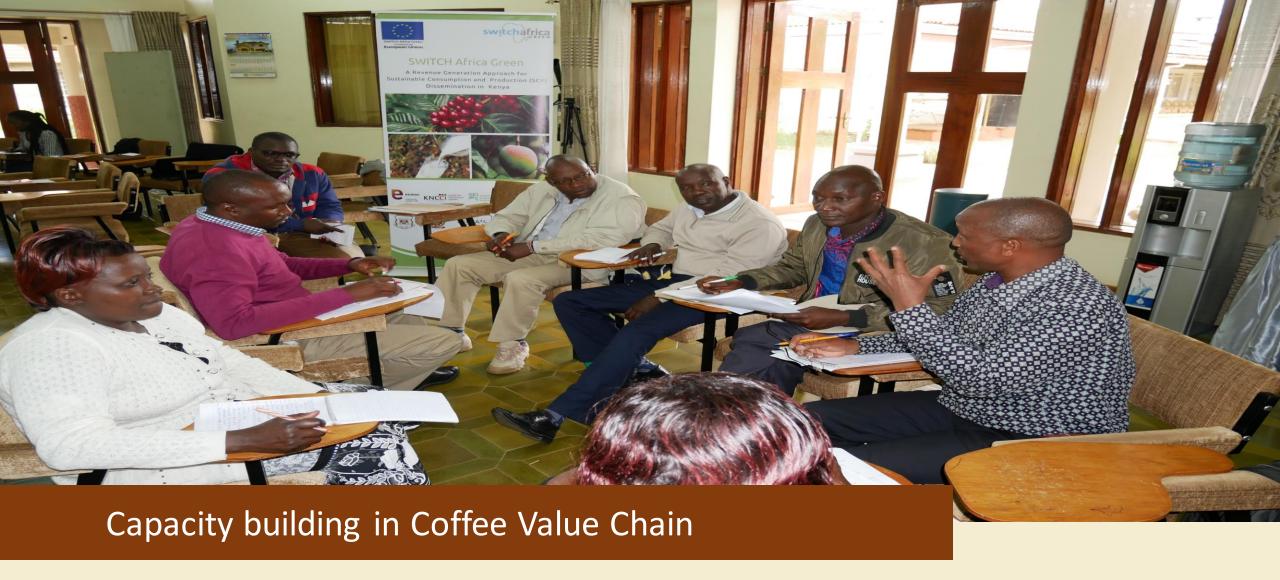

Mango value addition training

By the end of the training, participants had successfully processed and packaged three products from the mango fruit:

- mango jam,
- mango concentrate,
- mango juice.

Training on managerial and sustainable consumption and production practices and technologies to 27 MSMEs in Kenya's coffee value chain.

Capacity building in coffee value chain

The project beneficiaries were taught management skills and methods on how to incorporate sustainable consumption and production practices and technologies in their business models.

A course on how to acquire quality certification was held by a certification specialist, who presented strategies to achieve high quality yields at higher premiums.

Coaching

Coaches assist MSMEs in the development of new business models based on sustainable consumption and production solutions.

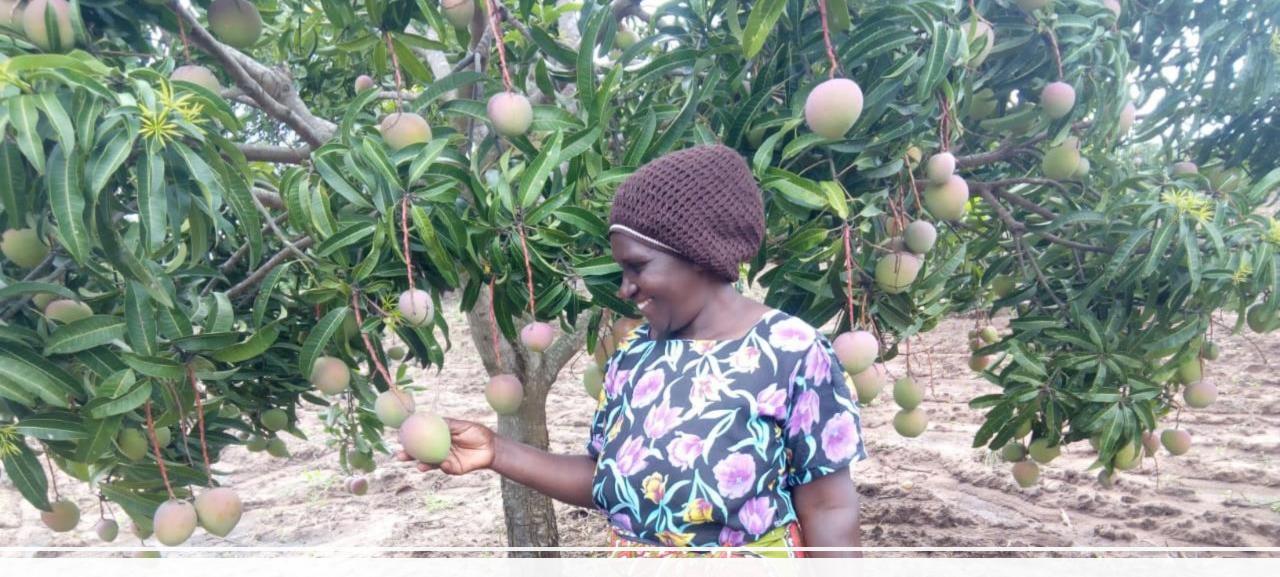

Rosebella Langat joined Green to Grow in 2018

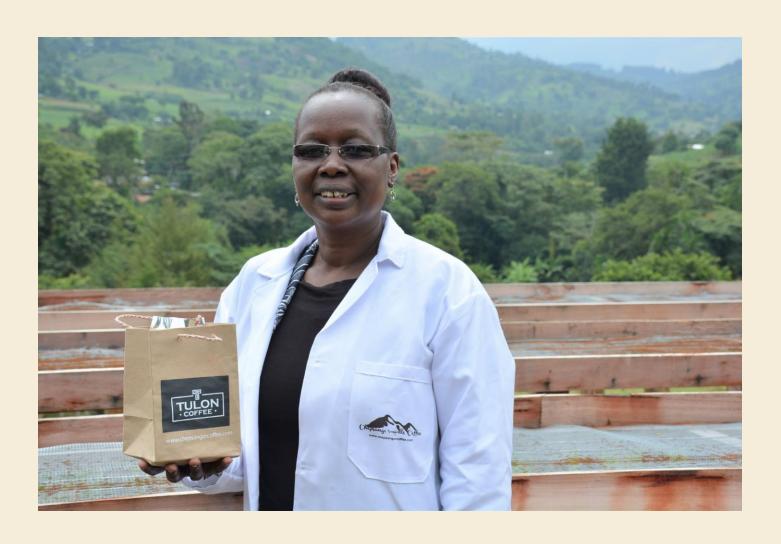

Christine Makomba joined Green to Grow in 2018

Greening Coffee production in Nandi Hills

- Eco Pulping machine
- Single Stem System
- Canopy farming and Forestry
- Hydraulic system

- Environmental and economic sound practices
- conserving the environment,
- better livelihoods for producers

Strengthening the mango value chain in Kitui

- Use of fruit fly traps
- Sustainable pruning techniques

- Higher quality produce and increased yield
- Passed on the knowledge from the training to fifty members

Disseminating & Catalyzing

A revenue generation approach for SCP dissemination in Kenya

The way forward

Capacity building

• Dairy value chain
• Trade associations

Awareness raising

- To producers and consumers
- From students to policymakers

Network facilitation

- For market linkages
- For access to finance

It was motivating to interact with entrepreneurs who have been in the coffee industry for decades! I learnt a lot on sustainable consumption and production practices and built synergies that will be beneficial for our coffee estate in Nandi."

Rosebella Langat

Asante! Thank you!
