XVII Meeting of the Inter-Agency Advisory  
Committee (IAAC) for MED POL

Athens, 9 - 13 April 1984

## M I N U T E S

## INTRODUCTION

1. The Meeting was convened by the Co-ordinating Unit for the Mediterranean Action Plan in collaboration with the Regional Seas Programme Activity Centre of UNEP. All Co-operating Agencies (FAO, WHO, WMO, UNESCO, IOC and IAEA) were invited to attend the meeting which took place at the office of MED UNIT in Athens, on 9 April 1984 (see list of participants attached as Annex I).

### Agenda item 1 - Opening of the Meeting

2. A. Manos opened the Meeting welcoming the participants. He briefly summarized the main achievements of MED POL since the last IAAC Meeting was convened (November 1983) and stated the importance of this Meeting in view of the coincidence with the Extraordinary Meeting of the Contracting Parties to the Convention for the Protection of the Mediterranean Sea against pollution and its related protocols.

### Agenda item 2 - Review of MED POL activities implemented since November 1983

3. A. Cruzado informed the participants of the main achievements of MED POL, focussing on the monitoring activities, where he informed of four completed agreements. He also stated that assistance had been provided to Cyprus, Israel and Yugoslavia and training had been organized in Yugoslavia and Cyprus. In addition, efforts were being made in order to keep all scientists participating in MED POL informed of the progress of the work and integrate them better in the programme.

4. The representative of IAEA informed the group that, in the framework of the monitoring activities, the instruments that the organization had been asked to purchase for participating laboratories in Cyprus had been acquired. He informed that, as to Yugoslavia, although all arrangements for purchasing the instruments requested had been completed, the purchase action had to be delayed due to the fact that the funds were not available in the early part of 1984. For the same reason, the training of Yugoslav scientists had to be postponed until the funds became available. The IAEA representative also stressed that the ILMR should be informed well in advance about the expected dates of training in order to organize their work for achieving effective training. He also reported on the results of the intercalibration exercise for heavy metals and chlorinated hydrocarbons, where, respectively, 20 and 10 samples had been sent out with, until the present moment, a relatively low response. He announced that the new sample (shrimp) was ready for distribution and that it could be announced to the participating institutes, while the fish sample would be ready during autumn 1984.

5. The FAO representative reported on the progress in the organization of the Meeting on the testing of Reference Methods to be held in Rome, 4-8 June 1984. He informed on the expected number of participants as well as on the Reference Methods to be discussed. He also informed that, once the meeting will have provided comments and amendments on the Methods, ILMR in Monaco would incorporate the changes and finalize the methods. He also mentioned the purchase of equipment provided through FAO and the recruitment of consultants and training of personnel in the framework of the assistance component.

6. The WHO representative reported that, in the framework of the monitoring, equipment had been ordered for Israel and Yugoslavia, as requested. As to the preparation of the Reference Methods, he informed the group that Reference Method No. 1 had been revised at the MED UNIT, that the Methods on BOD/COD, Phosphorus and Nitrogen would be ready by the end of May, and that new Methods on pathogenic organisms would be ready by 30 April. As to the intercalibration exercise on the MF Method, he informed of some problems being encountered in the preparation of the exercise in Greece, where the MPN Method was more in use. He also informed that another intercalibration exercise would be organized in Tunisia in October.

7. The IOC and UNESCO representative reported on the intercalibration exercise on petroleum hydrocarbons being carried out. From about 100 addresses approached, 13 had indicated an interest in participating and therefore received samples for analysis. Of these, 11 had returned results and a complete analysis of the exercise is expected to be ready early in May. As to the preparation of a new DRIFTEX experiment in the eastern Mediterranean, it was considered important that the report of the first DRIFTEX experiment (for the western basin) be finalized by the UNEP secretariat before launching a new one. The International IAEA/UNESCO Centre in Trieste was reported as being ready to collaborate to the new DRIFTEX experiment at no cost. The group was informed by the IOC/UNESCO representative that preliminary contacts had been made with Dr. Albaiges to organize a meeting in Barcelona on the Reference Methods on the analysis of dissolved/dispersed petroleum hydrocarbons as well as on microlayer sampling. A beach tar exercise could be also associated with this meeting, but he felt that this should be further discussed. He also informed that the draft Reference Method on monitoring of tar on beaches had been prepared and that the Method for determination of petroleum hydrocarbons had been put in UNEP format. During the meeting he also distributed a copy of IOC Manual and Guides No. 13 on Methods for monitoring of petroleum hydrocarbons.

8. The representative of WMO reported on the installation of two high volume samplers in France and Yugoslavia in the framework of the monitoring of transport of pollutants through the atmosphere. Two additional high volume samplers were ready to be distributed and contacts had already been taken as for their installation in Italy (Trapani) and Greece or Turkey. A joint WMO, IAEA (in charge of the analysis of the samples) and UNEP visit to the two operating stations in France and Yugoslavia was considered important and the WMO representative was asked to make arrangements to make it possible. Further arrangements to implement the parts of the MED POL for which WMO is responsible would be discussed at a meeting to be arranged in Geneva between WMO and UNEP staff in early May.

Agenda item 3 - Research activities : status of development and follow-up activities

9. The UNEP secretariat distributed at the meeting summary tables listing: 1) all research projects received and processed up to end of 1983; 2) all new 1984 research projects, and 3) all 1983 research proposals not yet cleared which possibly needed further negotiations. Tables 2) and 3) were analysed and discussed and, as updated, are attached as Annex II.

10. A number of remarks were made in connection with the procedure for further implementation of research activities. In particular the group decided that, in line with the recommendations of the WGSTC, new agreements and extensions would be reviewed after 15 March deadline and that a progress scientific report should be required at the end of the year and that each agreement should be stipulated for a period going, each year, from 1st July to 30 June of the following year.

Agenda item 4 - Publication of scientific reports of research activities

11. In introducing this agenda item, the secretariat distributed a draft outline of a publication that the MED UNIT intended to publish in regular series. The publication would contain the full scientific reports of the scientists participating in MED POL and had the main purpose of circulating scientific information and results among scientists and governments. Each report was agreed to contain no more than 15/20 pages including figures and tables. A first issue containing the already available reports to be provided by the Co-operating Agencies after reviewing their contents will be published with no delay in order to solicit additional contributions. The outline of the document is attached as Annex III.

12. The IOC/UNESCO representative expressed concern that, since these organizations did not receive any additional support for that work, the large amount of editing implied by the proposed procedure would add a further burden on the secretariats.

Agenda item 5 - Adoption of the Minutes and closure of the Meeting

13. The draft minutes were circulated for comments and approval during the Extraordinary Meeting of the Contracting Parties to the Barcelona Convention that all Agencies' representatives attended. Some amendments were given to the secretariat and were incorporated into the minutes.

A N N E X      I

List of Participants

FAO                    Mr. Gabriel P. GABRIELIDES  
                         Senior Fishery Officer (Marine Pollution)  
                         FAO Project Office  
                         Co-ordinating Unit for the Mediterranean Action Plan  
                         Leoforos Vassileos Konstantinou 48

OUTLINE OF DOCUMENT OF THE  
PUBLICATION OF SCIENTIFIC REPORTS OF RESEARCH ACTIVITIES

# United Nations Environment Programme

6 April 1984

Long-term Programme for Pollution Monitoring and Research  
in the Mediterranean Sea (MED POL - PHASE II)

MED POL SCIENTIFIC REPORTS No. 1

Prepared in co-operation with:

---

FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS  
WORLD HEALTH ORGANIZATION  
WORLD METEOROLOGICAL ORGANIZATION  
UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION  
INTERGOVERNMENTAL OCEANOGRAPHIC COMMISSION  
INTERNATIONAL ATOMIC ENERGY AGENCY

Note: This document has been prepared by the Co-ordinating Unit for the Mediterranean Action Plan of the United Nations Environment Programme (UNEP), in co-operation with Food and Agriculture Organization of the United Nations (FAO), World Health Organization (WHO), World Meteorological Organization (WMO), United Nations Educational, Scientific and Cultural Organization (UNESCO), Intergovernmental Oceanographic Commission (IOC) and International Atomic Energy Agency (IAEA) under project ME/0502-81-01(2298).

The designations employed and the presentation of the material in this document do not imply the expression of any opinion whatsoever on the part of the organizations mentioned above concerning the legal status of any State, Territory, city or area, or of its authorities, or concerning the delimitation of their frontiers or boundaries.

## Foreword

The Long-term Programme for Pollution Monitoring and Research (MED POL - PHASE II) is the environmental assessment component of the Mediterranean Action Plan which is part of the UNEP's Regional Seas Programme. Its programme was adopted by the Contracting Parties to the Barcelona Convention participating in the Mediterranean Action Plan in 1981 (UNEP/IG.23/11) and will last until 1990. The MED POL - PHASE II activities are carried out by national laboratories designated by the Mediterranean Governments and are co-ordinated by UNEP's Co-ordinating Unit for the Mediterranean Action Plan, in close co-operation with six Co-operating Agencies, (FAO, WHO, WMO, UNESCO, IOC and IAEA), responsible in particular for the day-to-day co-ordination of the research activities.

The MED POL - PHASE II programme is divided into two different groups of activities involving, respectively, monitoring and research.

- The monitoring activities are organized through National Monitoring Programmes; they include a monitoring of sources of pollution, of coastal and reference areas and of the transport of pollutants through the atmosphere.
- The research activities are based on individual research projects carried out by officially designated national research centres . The projects are carried out under agreement between the Agency and the national research centre, for a duration of a year, after their scientific and financial implications have been assessed by the relevant Co-operating Agency .

The present document is part of a series which intends to include the scientific reports of participants in the programme and more in particular in the development of the research activities of MED POL - PHASE II. The document has been prepared by the Co-ordinating Unit of the Mediterranean Action Plan after the reports have been reviewed by the relevant Co-operating Agency.

### Scientific Report

- Title of report
- Principal Investigator
- Other contributors
- Introduction and objectives of research
- Material, methods and area of investigation
- Results and discussion
- Conclusions
- References

---

Note: The designations employed and the presentation of the material in this document do not necessarily reflect the official opinion of UNEP and that of the Co-operating Agencies.
