

MINISTRY OF ENVIRONMENT AND URBANIZATION OF TURKEY

Views on the Framework of UNEA-3 Theme

Intensification of the every kind of pollution (air, waste, water, etc.) together with population increase and industrialization should be considered in defining the framework of the “pollution” theme for UNEA-3. Within this framework, we would propose the reduction of the pollution in every category as the main target. Accordingly, the improvement of the national and international legislation and cooperation, and supporting the implementation of the best practices should be considered. For this purpose, UNEA-3 should also include targets related to providing technical and financial assistance for the less developed and developing countries.
