NOTE

This document is not an official publication but a compilation of information on Pacific coral reef researchers to facilitate communication between them. It is a contribution to UNEP sponsored regional action plans for the protection and development of the marine environment and coastal areas in the Pacific region, specifically to the South Pacific Regional Environment Programme (SPREP), the South-East Pacific action plan and the East Asian Seas action plan.

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of UNEP, SPREP, Pacific Science Association or University of Guam concerning the legal status of any State or Territory, or of its authorities, or concerning the delimitations of the frontiers of any State or Territory.

reef researchers. UNEP Regional Seas Directories and
Bibliographies. Rome, FAO, 101 p.

PREFACE

The increasing co-operative effort to investigate, understand, protect and develop the Pacific environment and its resources, depends on the collaboration of scientists and institutions of that vast area. One of the corner-stones of such co-operation is the availability of up-to-date information on these scientists, institutions and their current programmes.

To meet this requirement, at the XV Pacific Science Congress held in Dunedin, New Zealand, in February 1983, the members of the Scientific Committee on Coral Reefs of the Pacific Science Association agreed that a Directory of Pacific Coral Reef Researchers should be compiled. A questionnaire and cover letter were developed and mailed during July and August to researchers in all phases of coral reef research within the Pacific area. These included individuals working in biological, geological, chemical and physical studies.

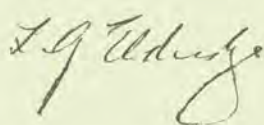

A high level of interest was shown with responses to this mailing exceeding 75 per cent. As a result the present volume includes details on 491 researchers from 27 countries and territories. In the USA a total of 22 states are represented, as are all the states of Australia.

The directory section lists names, addresses and details of the researchers interest, in alphabetic sequence of his or her name. It is followed by indexes for specific interest, taxonomic group, geographic area of concern and residence area. The subdivisions in these indexes are primarily those of the questionnaire, in some case further delineated by respondees.

Special thanks are extended to all who participated in the realization of this directory, especially to R.T. Tsuda, editor of the Coral Reef Newsletter, who assisted in the preparation and mailing of the original letters.

Since directories are usually out of date before they are printed, this listing will be continuously updated in future issues of the Coral Reef Newsletter. Please keep the compiler informed of new names to be added and of address changes which should be incorporated.

We hope that this Directory will be found useful in assisting the scientists and institutions interested in coral reef research in their common effort to understand, protect and develop the Pacific environment.
