B. **PROJECT DESCRIPTION SUMMARY**

---

1 Project ID number remains the same as the assigned PIF number.

2 When completing Table A, refer to the excerpts on [GEF 6 Results Frameworks for GETF, LDCF and SCCF](#) and CBIT programming directions.
**Project Objective:** Foster MedProgramme-wide learning and dissemination of knowledge, effective portfolio coordination and synergistic interactions among CPs, gender mainstreaming and monitoring progress to impacts.

<table>

**E. PROJECT’S TARGET CONTRIBUTIONS TO GLOBAL ENVIRONMENTAL BENEFITS**

---

For GEF Project Financing up to $2 million, PMC could be up to 10% of the subtotal; above $2 million, PMC could be up to 5% of the subtotal. PMC should be charged proportionately to focal areas based on focal area project financing amount in Table D below.

Update the applicable indicators provided at PIF stage. Progress in programming against these targets for the projects per the Corporate Results Framework in the GEF-6 Programming Directions, will be aggregated and reported during mid-term and at the conclusion of the replenishment period.
Provide the expected project targets as appropriate.

<table>

</tr>
<tr>
<td></td>
<td>Functional environmental information systems are established to support decision-making in at least 10 countries</td>
<td>Number of Countries:</td>
</tr>
</tbody>
</table>

Note on the corporate result No 5: As a cross-cutting project the Regional Support Project – CP4.1 will not directly result in reductions of POPs or Hg, which will be achieved under the chemicals and waste Child Project 1.1. However, the Regional Support project will indirectly support the achievement of those targets and allow for scaling up beyond the targets in CP 1.1. In terms of the disposal of POPs and mercury, the GIS-based tool to be deployed under this Child Project 4.1 for recording national inventories and assessing and visualizing the environmental impact of the inventoried wastes will directly facilitate decision making and operational planning for the field work to remove the wastes, thereby ensuring that the target of 2000 tons of PCBs and POPs are removed with maximum efficiency. The exchange of best practices planned under the Regional Support Project will also directly result in the scaling up and expansion of the demonstration activities on new POPs and Hg which are planned for only 3 countries under CP 1.1 (target under Indicator 9.4 is ‘3 country pilot demonstration projects on alternatives to new POPs in manufacturing’). The knowledge sharing activities included under the CP 4.1 will allow all the project countries (up to 8 total) to be informed and access the tools to also implement these practices.

**F. DOES THE PROJECT INCLUDE A “NON-GRANT” INSTRUMENT? NO**

(If non-grant instruments are used, provide an indicative calendar of expected reflows to your Agency and to the GEF/LDCF/SCCF/CBIT Trust Fund) in Annex D.)
PART II: PROJECT JUSTIFICATION

A. DESCRIBE ANY CHANGES IN ALIGNMENT WITH THE PROJECT DESIGN WITH THE ORIGINAL PIF

A.1. Project Description. Elaborate on: 1) the global environmental and/or adaptation problems, root causes and barriers that need to be addressed; 2) the baseline scenario or any associated baseline projects, 3) the proposed alternative scenario, GEF focal area strategies, with a brief description of expected outcomes and components of the project, 4) incremental/additional cost reasoning and expected contributions from the baseline, the GEFTF, LDCF, SCCF, CBIT and co-financing; 5) global environmental benefits (GEFTF) and/or adaptation benefits (LDCF/SCCF); and 6) innovativeness, sustainability and potential for scaling up.

Overview of the MedProgramme and context of the Child Project 4.1

The GEF/UN Environment “Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security” (2019-2024) represents the first GEF programmatic multi-focal area initiative in the Mediterranean Sea aiming to operationalize priority actions to reduce major transboundary environmental stresses in its coastal areas while strengthening climate resilience and water security and improving the health and livelihoods of coastal populations. The MedProgramme is implemented in nine beneficiary countries sharing the Mediterranean basin: Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro, Morocco and Tunisia. Its eight Child Projects cut across four different Focal Areas of the Global Environment Facility (International Waters [IW], Biodiversity [BD], Chemicals and Waste [CW], and Climate Change [CC]) and involve a wide spectrum of developmental and societal sectors, ranging from banking institutions, the private sector, governmental and non-governmental bodies, industry, research, media, and various other organizations. It builds on the MedPartnership and ClimVar & ICZM GEF projects which have enriched the knowledge on the Mediterranean environment and unraveled the implications of climate change and variability; strengthened countries’ mutual trust, cooperation and common purpose; consolidated the partnership among countries, UN bodies, civil society organizations, bilateral donors and the European Union (EU); and tested on the ground the feasibility and effectiveness of technical and policy instruments aimed at addressing major present and future threats to environmental sustainability and climate related impacts.

The eight Child Projects (CP) of the MedProgramme (Figure 1 and Table 1) are expected to deliver a set of complementary results embracing three categories of priorities identified by the TDA for the Mediterranean Sea which are translated into three components of the programme: i) Reduction of Land-Based Pollution in Priority Coastal Hotspots and measuring progress to impacts; ii) Enhancing Sustainability and Climate Resilience in the Coastal Zone; and iii) Protecting Marine Biodiversity.

---

6 For questions A.1 –A.7 in Part II, if there are no changes since PIF, no need to respond, please enter “NA” after the respective question.
7 For biodiversity projects, in addition to explaining the project’s consistency with the biodiversity focal area strategy, objectives and programs, please also describe which Aichi Target(s) the project will directly contribute to achieving.
8 GEF Lead Implementing Agency: UN Environment. Other GEF Implementing Agency: European Bank for Reconstruction and Development (EBRD). Leading Executing Agency: UN Environment/MAP. Executing partners: UNESCO International Hydrological Programme (IHP), European Investment Bank (EIB), Global Water Partnership – Mediterranean (GWP-Med), WWF Mediterranean Programme Office (WWF MedPO), IUCN, Priority Actions Programme Regional Activity Centre (PAP/RAC), Plan Bleu Regional Activity Centre (Plan Bleu), Specially Protected Areas Regional Activity Centre (SPA/RAC) and the Sustainable Consumption and Production Regional Activity Centre (SCP/RAC).
9 At the time of its approval in October 2016, the MedProgramme was comprised of seven Child Projects. Subsequently, a Mediterranean climate change adaptation project was developed by UN Environment/MAP for financing through the Special Climate Change Fund (SCCF). It was agreed by the UN Environment/MAP, UN Environment and the GEF Secretariat that this SCCF project would be managed for all intents and purposes as an additional Child Project of the MedProgramme. Hence the reference to eight Child Projects of the MedProgramme.

The fourth component (Knowledge Management and Programme Coordination) is comprised of Child Project 4.1 “Mediterranean Sea LME Environment and Climate Regional Support Project” which plays a key role within the MedProgramme as it “implements mechanisms for Programme-wide learning and dissemination of knowledge, monitoring the Programme’s progress to impacts, and fostering synergistic interactions among Child Projects”. Within the GEF programmatic approaches there is a need to ensure programme coherence and impact through coordination among diverse sets of multi-focal area Child Projects contributing to the same programme outcomes. A Support Project functions as a trait d’union (a common link) among Child Projects by providing overall coordination of the programme portfolio, resource-saving services, a robust system to managing knowledge effectively and a sound action plan for gender mainstreaming.

Overview of the Child Project 4.1

The current situation of the Southern and Eastern shores of the Mediterranean shows all the signs of progressive deterioration of environmental security. Among them, the loss and degradation of coastal and shallow marine ecosystems and the scarcity of coastal freshwater resources, compounded by the increasing negative impacts of climate variability and change, play an important role in determining social instability and political volatility. The “Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security” is a powerful response to these looming threats. The term “environmental security” used in the title of MedProgramme, captures its overall perspective and goal, which is to address all three major factors impinging on environmental security in the wider Mediterranean region, namely: (i) loss of environmental integrity impacting the lives of present and future generations; (ii) water scarcity and degradation intensifying conflicts at the water nexus and social instability; and (iii) insecurity experienced by individuals and communities as a consequence of climate variability and change.

The MedProgramme adopts the Programmatic Approach funding modality of the GEF, i.e., an overarching vision for change that generates a series of individual yet interlinked projects (Child Projects) under a common objective, and whose anticipated results are more than the sum of its components. This modality has proven uniquely suited to the present advanced state of the policy and legal framework for environmental assets in the Mediterranean Sea LME, since it has provided for the necessary involvement of multiple GEF focal areas, for the leveraging of broader partnerships and funding, and for creating the momentum and critical mass that is expected to sustain countries’ action for the long term. MedProgramme actions reflect regionally and nationally agreed upon priorities and strategies, address identified Mediterranean hotspots, and will be developed within a framework of effective transboundary cooperation ensured by the UN Environment/Mediterranean Action Plan (MAP)-Barcelona Convention system.\footnote{Since 1975, MAP has provided the institutional framework for cooperation in addressing common challenges of marine environmental degradation adopted by the Mediterranean States and the European Union. More information at:}
To ensure MedProgramme’s (i) coherence and impact through synergistic interactions among diverse sets of multiple focal areas Child Projects contributing to the same program outcomes, and (ii) overall consistency with strategic priorities agreed by Mediterranean countries and with GEF standards, there is the need for effective information flow and exchanges of experience within the MedProgramme and beyond, coordinated implementation of Child Projects, harmonized approaches for monitoring progress to impacts and for incorporating the new global priority of gender equality.

This crucial “glue” (or trait d’union) function will be fulfilled by Child Project 4.1: “Mediterranean Sea LME Environment and Climate Regional Support Project”. It is expected that, thanks to the support and synergetic action provided by the Child Project 4.1, the MedProgramme’s results will in fact be “more than the sum of its components”.

The project, while ensuring coordination and monitoring of all MedProgramme’s Child Projects, will have as main focus increasing the capacity of main stakeholders to address the major environmental problems affecting the Mediterranean coastal areas and shallow marine environments: pollution, impacts of climate change, coastal zone and marine resources degradation.

The project will develop its support function through three main lines of action:

(i) Knowledge Management and Dissemination, aimed at:

- Leveraging and systematically sharing knowledge assets generated by the Child Projects with the intended beneficiaries and audiences;
- Strengthening the science-policy interface (SPI) and influencing decision-making through data and information sharing, capacity building, and regional stakeholder engagement;
- Supporting the objectives of the Barcelona, Stockholm and Minamata Conventions and the work of the UN Environment/MAP through effective stocktaking and scaling up, and broader adoption of MedProgramme’s approaches and results;
- Fostering incremental innovation within GEF programmatic approaches and enriching the knowledge base of GEF Implementing and Executing Agencies.

(ii) Coordination and Monitoring, aimed at:

- Strengthening operational coherence, harnessing synergies and pooling resources among Child Projects in order to maximize cost and operational efficiencies;
- Implementing mechanisms for Programme-wide learning and dissemination of knowledge;
- Monitoring the execution of the activities under the entire Programme to assess the progress to impact;
- Reporting in a consistent and timely manner to track progress and ensure compliance with financial management requirements across all Child Projects;
- Identifying in a timely consistent manner, bottlenecks and challenges at programmatic level to tackle them with the programme stakeholders;
- Ensuring effective and cross-fertilizing interactions among Child Projects.

http://web.unep.org/unepmap/. It is developed under the UN Environment Regional Seas Programme which was established in 1974 with the scope of coordinating activities aimed at the protection of the marine environment through a regional approach. The MAP was the first UN Environment initiative to be developed under the Programme and became the model for other seas across the globe. The Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean (referred to as the Barcelona Convention) is a regional convention adopted in 1976 in the framework of MAP originally as a convention against marine pollution and revised in 1995 to streamline the sustainable development principles and expand the scope of its application to the land part of the coastal zones. It has entered into force in 2004. The Barcelona Convention is complemented by seven (7) Protocols addressing specific obligations to prevent, reduce and assess marine pollution from different sources, ensure integrated coastal zone management and protect marine and coastal biodiversity.
(iii) **Gender Mainstreaming, aimed at:**

- Providing an overarching and harmonized “Gender Mainstreaming Strategy” for the MedProgramme;
- Supporting and building capacity of Child Projects as they implement the Strategy through gender-responsive actions within the specific context of each project;
- Monitoring implementation advancements and consistency, as well as cohesion and complementarity of gender focus across the entire portfolio; and
- Benefitting, over the long term, the UN Environment/MAP system, by serving as an entry point and testing ground for mainstreaming gender in the programme of work of UN Environment/MAP.

The basic assumption of Child Project 4.1 is that all Child Projects, implementing agencies and executing partners, while benefiting from the support received, will in turn actively interact with Child Project 4.1 by contribution to the Programme’s Knowledge Management Strategy through their participation in stocktaking events, dialoguing and systematically contributing with information on progress, milestone achievements and events, environmental data and scientific advances, and issues affecting project implementation. Moreover, by ensuring integrated coordination of the eight (8) Child Projects of the MedProgramme, the Child Project 4.1 will allow for the monitoring and execution of the Programme’s Gender Mainstreaming Strategy.

The MedProgramme Coordinating Unit (MedPCU), established by MAP Secretariat/Coordinating Unit, will be responsible for the execution of Child Project 4.1, providing coordination and management support, implementing the Knowledge Management Strategy, and assisting in the execution of the Gender Mainstreaming Strategy throughout the entire MedProgramme. The MedPCU will be staffed by professionals with management skills and technical knowledge, thus benefiting the whole Programme.

The Barcelona Convention and its Protocols and the decisions of the its Contracting Parties provide the regulatory and policy framework under which the MedProgramme will operate and the MAP Barcelona Convention system will ultimately carry forward the legacy of the outcomes of the MedProgramme’s Child Projects, including its knowledge management mechanisms, approaches and tools. The MAP Components/Regional Activity Centers (RACs) will play a crucial role in sustaining and amplifying these efforts. Moreover, regular reporting to the Meeting of Contracting Parties to the Barcelona Convention on the progress made by the MedProgramme will be ensured through the MAP Secretariat.

1) **THE GLOBAL ENVIRONMENTAL AND ADAPTATION PROBLEMS, ROOT CAUSES AND BARRIERS THAT NEED TO BE ADDRESSED:**

The MedPartnership and ClimVar & ICZM GEF projects have enriched the knowledge on the Mediterranean environment and unraveled the implications of climate change and variability; strengthened countries’ mutual trust, cooperation and common purpose; consolidated the partnership among countries, UN bodies, CSOs, bilateral donors and the EU; tested on the ground the feasibility and effectiveness of technical and policy instruments aimed at addressing major present and future threats to environmental sustainability and climate related impacts.

Alongside and thanks to these GEF-funded support actions, UN Environment/MAP, at the request of the Contracting Parties to the Barcelona Convention, has developed a comprehensive regional policy framework including strategies, plans and guidelines that will serve as guidance for the regional and national efforts in the Mediterranean for the years to come.

The update of the National Action Plans (NAPs) for the implementation of the LBS Protocol of the Barcelona Convention and its Regional Plans in the framework of the Strategic Action Programme to address pollution from land-based activities (SAP-MED) succeeded in creating momentum at local, national and regional levels, with a remarkable level of involvement and participation of all stakeholders. In each country, national and local authorities, the industrial sector and NGOs discussed priorities, possible actions and opportunities for investment thus making NAPs a realistic initiative.
These remarkable achievements, while not yet bringing about measurable changes in the levels of environmental stress or in degradation trends, have however created the indispensable foundation and the enabling conditions for initiating national actions targeting major causes of marine and coastal transboundary degradation. To confront the challenge of implementation, thereby achieving concrete and lasting results, is the raison d’être of MedProgramme.

MedProgramme actions reflect regionally and nationally agreed upon priorities and strategies, and address identified Mediterranean hotspots. They will be developed within a coordinated framework of effective transboundary cooperation, Mediterranean-wide harmonized standards, indicators and monitoring procedures, information flow and exchanges of experience, and with the support of relevant regional bodies and an expanded partnership of agencies and donors.

Within MedProgramme’s context, Child Project 4.1 will provide the coordination, dissemination, experience sharing and monitoring mechanisms necessary to assist GEF beneficiary countries of the Mediterranean Basin to rise to this implementation challenge and step up their efforts and commitments, including financial.

2) BASELINE SCENARIO

The activities of Child Project 4.1 are devoted to knowledge sharing and dissemination, coordination and synergies, and monitoring of the MedProgramme’s progress towards impacts in climate resilience, land-based pollution reduction, coastal resources sustainability, and gender equality. For this reason, the baseline scenario for this support project addresses the state of the environment and monitoring frameworks in the Mediterranean basin; existing knowledge management initiatives and platforms of relevance to the MedProgramme; and current gender trends in the region.

State of the environment and monitoring frameworks

Since the 2005 Mediterranean Transboundary Diagnostic Analysis (TDA), the situation in the Mediterranean in terms of transboundary issues in the marine and coastal areas has evolved. In terms of major assessments, in addition to the evaluation of the Barcelona Convention SAPs and NAPs, and the revision of the NAPs on pollution from land-based sources, there have been several key assessments undertaken by the MAP, European Commission (EC), European Environment Agency (EEA) and other partners. These include: the initial integrated assessment of the Mediterranean Sea (2011); The State of the Mediterranean Marine and Coastal Environment (2012); the EEA-UN Environment/MAP report on the implementation of H2020 to de-pollute the Mediterranean by 2020 (2014); the MedTrends 2015 Report; and the Mediterranean 2017 Quality Status Report, amongst others. Over 100 technical reports were produced during the lifespan of the MedPartnership project on various issues relating to pollution, MPAs, aquifers, and fisheries. In addition, the EC and others have been financing a sizable number of marine-related research projects in the last decade, with many projects in recent years also attempting to bring together science and policymaking. For example, since 2010, the EC has invested 200 million euros in its Oceans of Tomorrow projects.

A robust monitoring framework for the Mediterranean region has been established by the MAP Barcelona Convention system covering a wide range of thematic areas addressing the state of the Mediterranean environment. The MAP Barcelona Convention system committed to implement Ecosystem Approach through the adoption of a Roadmap in 2008, which led to the adoption of 11 Ecological Objectives, 61 indicators and definition of Good Environmental Status (GES) and targets in 2012 at the COP17of the Barcelona Convention. This led to the Integrated Monitoring and Assessment Programme (IMAP) for the Mediterranean, which was adopted in 2016 at the Barcelona Convention COP19.

In this context, the challenge is now for countries, to redesign their national monitoring programs in line with IMAP and the 23 common indicators covering also offshore areas. Regarding monitoring of marine pollution, countries will build upon their national monitoring programs and database that has been coordinated in the framework of MAP/MED POL programme since 1999, with agreed parameters and stations in key hotspots and coastal areas. However, due to the innovative features of IMAP few data sets exist for the majority of the common indicators, other than some contaminants, nutrients and chlorophyll data, particularly in the GEF eligible countries of the Mediterranean.
A foundation for monitoring the Mediterranean region’s progress towards the 2030 Agenda for Sustainable Development and its Sustainable Development Goals was established in 2016 through the adoption of the Mediterranean Strategy for Sustainable Development 2016 – 2025, which includes provisions for a monitoring system and a regional dashboard on the implementation of the Strategy. In 2017, this framework was expanded by the definition of a set of indicators for the monitoring of the implementation of the Regional Action Plan on Sustainable Consumption and Production in the Mediterranean.

In spite of these important developments, there are still some fundamental needs including:

1. Integration of existing national and regional databases, not for the creation of new platforms but to look towards systems of sharing data, and making it publicly available, through for example Spatial Data Infrastructure (SDI). Barriers include many national databases that are in the national language and need translation, and the need to establish data agreements among all participating countries, and potentially also a data sharing decision to be adopted by the Barcelona Convention Contracting Parties.

2. Completion of a set of common indicators, including ecosystem approach-based indicators to assess drivers, pressures and responses within a framework for a revised TDA\textsuperscript{12}. Without a strong and quality assured monitoring program in the Mediterranean coastal areas and offshore waters, it will not be possible to measure the impact and change resulting from the implementation of projects, policy reforms, capacity building and investments, including those proposed under the MedProgramme. The Mediterranean is a complex ecosystem with many pressures, therefore understanding the relationship between pressures and state requires a coherent, coordinated and comparable monitoring systems, indicators of pressures, drivers and response. This has also to be in line with the new Sustainable Development Goals, future assessments, and state of environment reports which are more quantitative rather than qualitative, so as to assess which actions are the most cost-effective and sustainable solutions.

Knowledge Management

The MedProgramme cuts across four different GEF Focal Areas (Biodiversity, Chemicals and Waste, International Waters and Climate Change), therefore its results will be relevant for many different sectors and activities in the Mediterranean region. A review of the existing initiatives related to knowledge management (KM) in these domains was carried out with the purpose to: 1) avoid unnecessary duplication; 2) replicate and build on successful practices; and 3) establish potential synergies and partnerships. The research included knowledge platforms, databases, initiatives and projects on knowledge/information sharing in the Mediterranean region (or globally when relevant) focusing on pollution reduction, biodiversity, water resources (fresh and marine) and climate change. This research is summarized in detail in the MedProgramme Knowledge Management Strategy (Annex P).

The result of the baseline analysis is a detailed knowledge map that will be useful during the execution of the Child Project 4.1 and the MedProgramme to:

- Establish collaborations (for content sharing and use of respective networks to increase impact and dissemination);
- Benefit from existing collected data and technical information, make reference to relevant policy and legal frameworks;
- Get inspiration from effective data visualization examples and platform designs, and replicate/participate in successful awareness raising campaigns and capacity building activities (see in Figure 2) the legend of the Knowledge Management Baseline Overview - Relevance for the MedProgramme).

Against this baseline (Figure 3), the MedProgramme will generate new data and develop additional capacity of beneficiary countries to access and use evidence-based information to reduce pollution in marine and freshwater coastal bodies, increase resilience to climate change, improve the governance of water resources, promote the nexus approach and protect

\textsuperscript{12} An updated TDA will be produced by MedProgramme as part of Child Project 1.1.
biodiversity and ecosystems. It will also endeavor to strengthen the links among knowledge management systems that support GEF interventions in the Mediterranean region, and in particular to promote effective knowledge sharing among the IW and CW focal areas to enhance efforts to manage land-based sources of pollution affecting the Mediterranean Sea.

<td>FATE and impact of pollutants in terrestrial and aquatic ecosystems</td>
<td><a href="http://fate.jrc.ec.europa.eu/rational/norway.html">http://fate.jrc.ec.europa.eu/rational/norway.html</a></td>
<td>FATE is the ensemble name for the pool of activities related to the assessment of fate and impacts of pollutants in terrestrial and aquatic ecosystems carried out at the Institute for Environment and Sustainability (E4S) of the Joint Research Centre (JRC). Contaminants spread across different environmental media through atmospheric deposition, leaching from soil to groundwater, accumulation in rivers and lakes, and discharge into the sea. FATE addresses the fate and impacts of pollutants across a range of temporal and spatial scales depending on the policy question and making the best use of available data. The results are pollution risk and vulnerability maps, which are very useful to assess the impact of EU policies, raise public awareness and facilitate planning of management scenarios.</td>

Gender mainstreaming

An added synergy that Child Project 4.1 will pursue is the coherence and execution of the Gender Mainstreaming Strategy (Annex Q) of the MedProgramme – thus, positively impacting upon the socioeconomic and gender baseline of the region, particularly in the context of environmental security and resilience.

Gender mainstreaming, has been defined as: the process of assessing the implications for women and men of any planned action, including legislation, policies or programs, in all areas and at all levels. It is a strategy for making women’s as well as men’s concerns and experiences an integral dimension of the design, implementation, monitoring and evaluation of policies and programs in all political, economic and social spheres so that women and men benefit equally, and inequality is not perpetuated. The ultimate goal is to achieve gender equality. Elaborating upon this definition, the Division for the Advancement of Women on Gender Mainstreaming, added: gender mainstreaming requires more than a quantitative change in numbers of women and men participating in, or benefiting from, policies and programs. It requires a transformation of all sectoral policies at all levels, and of institutions, organizational practices, attitudes and systems that shape them so that they fully consider the realities, needs, and views of women.

Socioeconomic landscapes and gender relations in the Mediterranean region form a kaleidoscope of overlapping social, economic and cultural roles, spread across a diverse multitude of countries and communities. It is important to consider these nuances, as they often determine how women and men are able to access and leverage sustainable development opportunities and cope with (build resilience against) environmental degradation; pollution, chemicals and waste hazards; pressures on natural resources, biodiversity and coastal and marine ecosystems; and climate change and related risks.

---

13 This is a shortened baseline paragraph, from the Strategy. Please see Annex P for further details.
14 In July 1997, the Group of Specialists on Mainstreaming, appointed by the ECOSOC, laid out the tenets of gender mainstreaming, which continue to spur and inform UN action. See Gender Mainstreaming: An Overview for more. United Nations. (2002)
15 Ibid.
16 This perspective stems from the latest turn in gender and environment literature, which puts political ecology at the center of environmental and climate policy-making. As D. E. Rocheleau (1996) wrote, the gender perspective is “a critical variable in shaping resource access and control, interacting with class, caste, race, culture and ethnicity, to shape process of ecological change, the struggle of men and women to sustain ecologically viable livelihoods, and the prospects of community for sustainable development.”
The beneficiary countries of the MedProgramme display a variety of socioeconomic and gender phenomena – for example, the labor market dynamics\textsuperscript{17} in the northern Mediterranean countries exhibit a significant gender gap: women’s employment rates (especially for marginalized or minority communities such as the Romas) are lower, along with an existing gender wage gap.

For several countries in the Mediterranean, coupled with barriers to the labor market and employment opportunities, women often face particular forms of institutionalized exclusion from civil society and political spheres. Since economic capital is among the important determinants of coping capacities to external shock, women (and other population subgroups, including ethnic minorities) are more likely to be vulnerable. The ‘double disadvantage’ of the situation should also be reckoned with: due to lack of viable economic capital, vulnerable groups are often excluded from policy negotiation and decision-making – increasing the possibilities of exposure to the threats looming in the Mediterranean region. Further, decision-making power within the household and the polity could be limited by traditional interpretations of gender norms, reducing women’s capacities to engage in the public sphere and gear development opportunities to safeguard their interests.

In recent years, however, women have been capitalizing on opportunities presented by pluralistic interpretations of traditional gender norms, and entering both the work force and the public space. That being said, the gains achieved through social change in this region may not keep pace with the risks and threats arising from the lack of disposal and prevention plans for toxic chemicals and heavy metals, proper management policies for natural resources and preservation planning for biodiversity in the coastal zones, and growing threats of climate change and environmental degradation in the region. Across the region, burdens of emerging risks and shocks is expected, thus, to fall on the vulnerable and susceptible groups.

\textsuperscript{17} See this report by the Union for the Mediterranean (UfM) regarding an action plan towards investing in gender equality in the region.
3) THE PROPOSED ALTERNATIVE SCENARIO

The Project’s Theory of Change

The design of Child Project 4.1 is expected to produce two primary outcomes:

(i) Uptake of the lessons and of the cutting-edge knowledge generated across the portfolio of MedProgramme interventions will improve the capacity of key regional stakeholders to build climate resilience, reduce pollution from nutrients and persistent toxic substances, sustainably manage coastal freshwater and marine resources, protect biodiversity, restore coastal ecosystems, and advance gender equality; and

(ii) Integrated coordination of the Programme and monitoring its advancement will strengthen the effectiveness of all Child Projects, ensure their consistency with the overall MedProgramme objectives and help capture synergies among projects and partners.

These outcomes will be achieved through support activities that will embrace the whole Programme, and revolve around three main pillars:

- Knowledge Management;
- Coordination and Monitoring;
- Gender Mainstreaming.

The Theory of Change (Figure 4) recognizes that if countries sharing the Mediterranean coastal and marine environments, all Child Projects of MedProgramme, and the many organizations and bodies with mandates over the Mediterranean Sea remain fully committed and actively contribute to Child Project 4.1; if there is a shared recognition of the need to manage and protect the coastal and marine resources of the region; if regional cooperation continues to provide incentives and support; then, in the medium term, through the activities and outcomes produced by Child Project 4.1 the stress reduction approaches promoted by MedProgramme will more likely be broadly adopted; positive trends in monitoring data produced by the countries will foster commitment to full SAP implementation, and the Barcelona Convention System will enhance its support to SAP implementation. This will also indirectly accelerate the countries’ implementation of the Stockholm and Minamata Conventions requirements on management of hazardous chemicals and wastes.

In the long term, full SAP implementation will reverse degradation trends and improve sustainability of coastal environmental resources; Mediterranean countries will be better prepared to face threats from global changes and climatic variability and change; overall environmental security will be enhanced.
Figure 4 Child Project 4.1 Theory of Change: From outcomes to impacts
Aware of the existing needs/obstacles/barriers analyzed in the baseline and theory of change sections, Child Project 4.1 “Mediterranean Sea LME Environment and Climate Regional Support Project” will aim to significantly improve the situation against the existing baseline. Its objectives are to:

- Promote innovation across technology and governance to reduce land-based sources of marine pollution, foster ICZM and coastal aquifer management, and protect marine biodiversity;
- Monitor progress towards impacts within the context of MedProgramme;
- Provide the overall coherence, coordination and delivery of the MedProgramme as a whole;
- Increase collaboration in learning and capacity building between the Mediterranean countries and agencies involved in the Programme on best practices to improve environmental security along Mediterranean coasts;
- Foster gender equality thorough a harmonized Gender Mainstreaming Strategy.

This regional Child Project will complement and support MedProgramme’s mostly national projects and maximize their effectiveness by providing opportunities for south-south learning, fostering cooperation and the use of Monitoring and Evaluation (M&E) tools and geospatial services, disseminating best practices and peer-reviewed publications and developing portfolio-wide training and communication strategies. It rests upon three pillars: Knowledge Management, Coordination and Monitoring, and Gender Mainstreaming.

Knowledge Management

The MedProgramme strives to become a knowledge hub in the Mediterranean region to scale up successful practices, encourage broader adoption, promote knowledge sharing and support the common objectives of the signatories to the Barcelona Convention. This is the vision encapsulated in Child Project 4.1 through its supporting functions to all eight Child Project under the MedProgramme. To support this vision a new integrated Programme-wide Knowledge Management Strategy has been developed. The Strategy introduces mechanisms for learning and dissemination of the knowledge produced by the entire Programme. This first pillar of Child Project 4.1 will in particular:

- Ensure the effective management of data and learning among all Child Projects through annual stocktaking meetings and other communication/dissemination means;
- Monitor and disseminate throughout the region and beyond, the Programme’s progress towards impacts in climate resilience, land-based pollution reduction, and coastal resources sustainability, gender equality and empowerment of women;
- Raise regional and global awareness on the Programme and its objectives and accomplishments through the use of effective and modern communication tools; and
- Ensure coordination and synergy with the existing and relevant initiatives ongoing in the region.

The KM Strategy puts in place a framework that will underpin and guide the MedProgramme knowledge-sharing activities and support the achievement of the Programme outcomes, reflecting the complexity of its portfolio while ensuring that its findings are effectively translated, shared and delivered to the intended audiences. The Knowledge Management Strategy is briefly described in section A.8 of this document and provided in full as Annex P.

Coordination and Monitoring

Coordination and Monitoring is the second pillar of Child Project 4.1, the one that will operationalize the MedProgramme. This pillar will strengthen the operational coherence of the MedProgramme, harness synergies and pool resources among Child Projects. Amongst others, this will support cross-cutting actions such as:

- Implementing mechanisms for Programme-wide learning and dissemination of knowledge;
- Monitoring the execution of the activities under the entire Programme to assess the progress to impact;
• Identifying in a consistent manner bottlenecks and challenges at the programmatic level, to timely tackle them with the programme stakeholders; and
• Ensuring effective and cross-fertilizing interactions among Child Projects

**Gender Mainstreaming**

The Gender Mainstreaming Strategy constitutes the third pillar of Child Project 4.1. The Strategy adopts a transformative approach (‘the approach of difference or reversal’), positing a gender equality vision for the MedProgramme that questions established categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is therefore not an end (goal) of the MedProgramme—rather, a means (process) to an end (greater gender equality) among beneficiary countries.

Given the socioeconomic and gender baseline in the region, the Child Project 4.1’s proactive, GEF-7 ready gender approach is timely and necessary. Child Project 4.1 will not only have a unique role to play in maintaining these organizational (GEF’s and UN Environment’s) gender priorities (presented above)—being the coordination project, it will also oversee the execution and coherence of the Strategy, across the portfolio. By executing the Gender Mainstreaming Strategy, Child Project 4.1 will:

• Provide tailored action points and cohesive gender focus to the different Child Projects – since the Strategy allows for considerable autonomy for each Child Project to conduct its unique gender assessment and develop a tailored gender action plan, Child Project 4.1 will have a support role – the Gender Specialist(s) that will provide periodic support to the MedPCU (through Child Project 4.1 resource allocation) will have a birdseye view of gender actions in the Programme, ensuring complementarity of regional and national gender actions, in project-specific contexts.
• Generate pioneering knowledge and information on gender, socioeconomic factors and environmental security in the Mediterranean region – by providing a gender support structure to the pan-Med Programme portfolio, Child Project 4.1 will also provide a platform for ‘cross-fertilization’ by pooling in gender-relevant research and data (from the different Child Projects) to facilitate Programme-wide learning and exchange in a first-of-its-kind endeavor pertaining to the region.
• Impact the gender and socioeconomic status quo of the beneficiary countries – by placing gender-responsive activities and gender-aware policy-making at the core of the MedProgramme agenda; and by partaking in as well as furthering the current efforts on gender equality to specifically leverage opportunities for inclusive and accessible environmental and social co-benefits.

The Gender Mainstreaming Strategy is briefly described in section A.4 of this document and provided in full as Annex Q.

**Objectives and Benefits of the Child Project 4.1**

18 The GEF-7 Programming Directions, prepared by the Secretariat in the April 2018 Stockholm meeting clarifies the GEF’s evolving and progressive gender strategy – by providing action points for each GEF focal area. The MedProgramme’s Gender Mainstreaming Strategy has taken stock of these new developments, and has incorporated the following focal area-specific gender standards:

1. Biodiversity focal area (such as: assessments to understand gender-disaggregated biological resource, providing women and other natural resource-dependent groups equal partnership in protection management);
2. Climate Change focal area (such as: incorporating action points to address the different climate risks faced by men, women, boys and girls and providing adaptation alternatives that improve the status quo);
3. Chemicals and Waste focal area (such as: understanding the socioeconomic dynamics that expose men and women to different chemicals, as well as their biological implications);
4. IW focal area (such as: gender assessments and social analysis during project preparation, and differentiated reporting of output indicators and additional measures based on the GEF’s Gender Action Plan.
The objectives of Child Project 4.1 along with its benefits structure and three pillars are presented below in Figures 5 and 6.

Figure 5 Child Project 4.1 Objectives and Benefits

Figure 6 Child Project 4.1: Three pillar approach and coordinating mechanism
The project consists of two Components:

**Component 1: Knowledge sharing and dissemination**

Political attention at the national and regional levels, and active stakeholder participation will be maintained throughout the implementation of the Programme through the development of an effective and innovative information sharing and communication strategy. This Component aims also to improve coordination among the executing agencies and institutions involved in the Programme and develop a reporting system for all the Child Projects. This will enhance learning uptake and adaptive management of each Child Project and strengthen all of the MedProgramme’s interventions.

**Outcome 1:** The increased uptake of the lessons and of the cutting-edge knowledge generated across the portfolio of MedProgramme interventions, and the active participation in IW: LEARN activities, Communities of Practice, and events, improve the capacity of key regional stakeholders, and of the global IW and CW communities, to build climate resilience, reduce pollution from nutrients and persistent toxic substances (POPs and Mercury), sustainably manage coastal freshwater and marine resources, protect biodiversity, and restore coastal ecosystems.

**Output 1.1: Knowledge management platform in place**

The engine of the KM Strategy is enshrined in a powerful web-based knowledge hub comprised of a data and information management system (with both public and restricted access) and a combination of visualization tools to serve the portfolio’s needs.

The platform will serve as central repository of all the data generated by the eight Child Projects of the MedProgramme and will be designed with a view to the following strategic knowledge management objectives:

- Facilitate information sharing and promotion of the Programme achievements among the partners and the regional stakeholders.
- Reflect the indicators of all Child Projects in the establishment of the relevant tools and frameworks, and seek coherence with efforts underway in the GEF’s Chemical and Waste Focal Area to create a platform to assist countries in meeting the reporting requirements of the Stockholm and Basel Conventions.
- Support policy development through its data collection and management tools.
- Strengthen the science-policy interface, incorporating existing relevant data generated by the countries, with the clear understanding that no data would be disseminated without the permission of its owner.
- Assist countries in meeting their IMAP reporting requirements.
- Ensure that the highly valuable legacy of the MedPartnership, which produced a substantial volume of knowledge and information as well as a number of tools and guidelines, lessons, and experiences, is carefully preserved and easily accessible, including translations of key documents.
- Evolve, over the long term, into a tool of the Contracting Parties of the Barcelona Convention. This process will be initiated during the execution of the MedProgramme and will have to follow several steps over which the Contracting Parties will assess the platform in terms of: 1) its value added for the work of the Convention; 2) the practical implications linked to its support; and 3) eventually will decide if use it systematically as a tool of Barcelona Convention. This decision is ultimately taken by the countries an official meeting of the Convention (i.e. a Conference of the Contracting Parties), or any other decision-making meeting where the countries are represented by nominated officials.
Such an integrated platform should host: 1) a project management tool; 2) a public/outward-facing portal, including sub-pages for each Child Project; 3) visualization tool(s) to display a digitalized representation of data through GIS and other suitable means; and 4) a database for raw/primary data.

1. **The project management tool (PMT):** A multilingual online project management tool (integrated in the KM platform) can respond to the need of supporting efficient project (and programme) management by facilitating communication and information exchange among key actors of the Programme; promote knowledge sharing and peer-to-peer learning; facilitate tracking and monitoring of progress; and meet reporting requirements. A review of options currently available on the market (such as Asana, Freedcamp, Wrike, Slack, Microsoft Project, Basecamp, among others) has been carried out in the preparatory phase of the MedProgramme with a view to inform the selection of the most suitable tool to serve the needs of the portfolio. The final selection and adoption of the tool will occur during the inception phase of Child Project 4.1. This decision-support system employs effective data-mining techniques and can be customized to suit the programme’s needs, and project managers (and designated project collaborators) will receive specific training on its use and adoption to ensure portfolio-wide consonance. Key features for such a tool include (but are not limited to): automated reporting, shared calendars, live editing/collaboration on document development, workflow and task monitoring, Gantt–Chart, time tracking, file management and cloud repository, encrypted security, back-ups, integration with email and other products, mobile apps, and role-based access control and discussion boards. The majority of respondents to the online survey on projects needs the idea of utilizing a PMT (and benefitting from ad hoc training). Previous experience from MedPartnership showed limited uptake of a similar tool, however since then these online tools have greatly improved their features and levels of customization, and have been adopted widely to manage complex, multi-partner and multi-lingual projects.

2. **The outward-facing MedProgramme portal:** will be populated with key information showcasing progress towards impact and the contribution of the MedProgramme to global and regional environmental goals. The portal will serve as a gateway for information related to international waters, coastal zones, biodiversity and climate resilience in the Mediterranean Sea basin, bringing together information from GEF and non-GEF projects (for example, results from the MedPartnership project will be made available and possibly re-packaged in new materials) for broad dissemination and cross-fertilization (several platforms identified in the KM baseline can be cross-referenced from the MedProgramme platform to reach out to vaster audience and stakeholders). It will closely dialogue with the GEF’S new portal (corporate database for projects, reports, and documentation) and the IW:LEARN website. The MedProgramme portal will feature a highly user-friendly interface including effective search functions, filters (such as drop-down menus) and analytical capabilities. Each Child Project will have dedicated sub-pages about their specific activities. Child Projects are expected to provide regular information (in different multimedia formats) to generate content for their respective project sub-pages and the overall programme portal. The MedPCU will be responsible for curating the information provided and packaging them for the intended audiences.

3. **Visualization tools:** Visualization tools\(^\text{19}\) will be used to display spatial and non-spatial data (be they quantitative or qualitative) generated by the projects. Data need to be connected, stored and mined in a way that makes them readily available not only to track progress but also to support decision making by the different stakeholders. GIS (geographic information systems\(^\text{20}\)) will be largely used as well as textual information, photos, story maps, pie charts, graph charts, infographics, map dashboards, trend line charts, among others. Users can build a query based on specific criteria such as geographic area, data layer or specific indicators. Alternatively, users can simply browse for information using the icons provided. There are a number of visualization software tools available

\(^{19}\) Data visualization is the presentation of data in a pictorial or graphical format, and a data visualization tool is the software that generates this presentation. Data visualization provides users with intuitive means to interactively explore and analyse data, enabling them to effectively identify interesting patterns, infer correlations and causalities, and supports sense-making activities.

\(^{20}\) The information about location associated with observation and statistical analysis is called geographic information.
both as open source and commercial options. A number of products (with license or open access) could be suitable for integration in the MedProgramme knowledge platform, such as Esri ArcMap and ArcGis, Geonode, QGIS, MapX \(^{21}\) and Google Earth Outreach\(^{22}\). The final selection will be made during the inception phase.

4. **Raw/primary data:** Raw/primary data will be stored in a database with flexible restricted/public access. A shared data model/protocol should be agreed at the beginning of the Programme to ensure that projects will compile relevant data with a standardized approach and enable a harmonized data entry system (the INSPIRE directive\(^{23}\) could be taken as reference to harmonize the process). Issues related to open data, ownership, quality and review of data will be addressed in this exercise; a mapping of voluntary standards can help to evaluate feasible options. Contributors of data are all stakeholders of the MedProgramme, including the Executing Partners. Child Projects are responsible for producing their own data.

In addition to promoting knowledge sharing among the stakeholders of the MedProgramme, there is also a need to facilitate the exchange of knowledge, information and data between the Programme and other relevant initiatives and processes in the region. These include ongoing GEF as well as non-GEF initiatives such as the H2020 Program and the SEIS II South Project, both financed by the EU. Of particular relevance in this domain is UN Environment/MAP’s “Integrated Monitoring and Assessment Programme of the Mediterranean Sea and Coast and Related Assessment Criteria” (IMAP) information system. The IMAP system aims to establish a regional pool of socio-economic and environmental data that can be used to produce assessment reports based on a set of commonly agreed indicators to facilitate comparison across the Mediterranean region. The MapX platform on chemicals and waste being developed by UN Environment for POPs and mercury data storage and visualization, including addition of data from both Stockholm Convention NIPs and Minamata Convention NAPs; and upload of detailed waste inventories to facilitate environmental risk mapping and prioritization. Furthermore, there are opportunities to promote knowledge generated by the MedProgramme by linking with other relevant platforms, such as the UN Environment Regional Office for Africa managed Africa Adaptation Knowledge Network online portal, an information sharing portal on ecosystems-based adaptation best practices. Efforts throughout the lifespan of the MedProgramme will be undertaken to link as much as possible the KM platform to existing knowledge which would enrich the execution of the MedProgramme while, at the same time, would also benefitting from the information produced by the Programme. A comprehensive listing of existing knowledge management platforms and initiatives of relevance to the MedProgramme is provided in Figure 2 above (Section 2, Baseline scenario).

Care will be taken in the design of the MedProgramme’s knowledge management platform to ensure coherence with existing data platforms of the UN Environment/MAP system and other relevant knowledge management platforms, in particular with respect to harmonization of data requirements.

**Output 1.2:** Communication, Outreach and Awareness Raising Products and Activities produced.

**MedProgramme identity:**
In terms of visibility, the MedProgramme will be presented in a holistic and coherent way through the development of clear vision statement and positioning, visual identity, logo design, etc. showing consistency and integration across the portfolio. At the same time, each Child Project will be granted individual identities within the overall MedProgramme-

---

\(^{21}\) MapX was developed by UN Environment, the World Bank and the Global Resource Information Database (GRID-Geneva) to capitalize on the use of new digital technologies and cloud computing in the sustainable management of natural resources. More info: [www.mapx.org](http://www.mapx.org).

\(^{22}\) A recent partnership has been established between UN Environment and Google.

\(^{23}\) The INSPIRE Directive aims to create a European Union spatial data infrastructure for the purposes of EU environmental policies and policies or activities which may have an impact on the environment. This European Spatial Data Infrastructure will enable the sharing of environmental spatial information among public sector organizations, facilitate public access to spatial information across Europe and assist in policy-making across boundaries. INSPIRE is based on the infrastructures for spatial information established and operated by the Member States of the European Union. The Directive addresses 34 spatial data themes needed for environmental applications. The Directive came into force on 15 May 2007 and will be implemented in various stages, with full implementation required by 2021. More info: [https://inspire.ec.europa.eu](https://inspire.ec.europa.eu).
branding in order to promote specific activities and benefit from ad hoc services. This will entail the design of consistent logos for each Child Project, creation of sub-websites within the Programme platform, organization of tailor-made trainings, preparation of specific publications, social media services, among others.

The MedPCU will develop a proposal in close consultation with project teams and, once adopted at the Steering Committee level, Child Projects are expected to use it consistently.

**Storytelling for advocacy:**
A number of traditional storytelling instruments will be blended with innovative and creative approaches to increase dissemination and advocacy efforts. Particular emphasis will be given to the preparation of high-quality short movies, animations and documentaries, graphic novels, documentaries, podcasts / radio programmes, infographics, art exhibitions, digital interactive stories/articles/interviews, professional photos, microblogging, e-books, art exhibits, among others. The MedPCU will collect different multimedia material from the Child Projects necessary to prepare these products. Translations of key communications outputs will be carried out in English, French and Arabic to ensure ample dissemination in the participating countries. Specific translations in other national languages will be sought pending budget constraints and upon due consideration of stakeholders’ needs.

**Social Media:**
Facebook, Instagram, YouTube and Twitter are four social media tools suggested for use by the MedProgramme. Development of timely and appropriate content and material to populate these channels is indispensable to achieve the desired impact. Child Projects will be prompted to contribute with relevant and ad-hoc information, pictures, statistics and other data to enrich the social media campaign.

The use of hashtags will be coordinated with the GEF Implementing Agencies (IAs) and Executing Agencies (EAs) and project and country representatives of the Programme in support also of other related initiatives and campaigns.

The registration on the above-mentioned channels (or a selection of them) will take place at the beginning of the Programme and content population will start as soon as data and information from the projects becomes available.

**Launching/Closing events of the MedProgramme:**
The design and practical details of these events will be planned during the inception phase of the MedProgramme. Considering the staggered initiation timeframes of the different Child Projects, a launching event of the MedProgramme could be organized in the form of a press conference to coincide with the kick-off of the Support Child Project 4.1. Basic communications material about the objectives of the MedProgramme (such as visual identity, slogan, mission statement, description of Child Projects, informative brochure, short promo video, basic online pages, etc.) should be prepared prior to the launching event. Participation to these events will not necessarily be open to the large public, however the information and messages emanating from them will be relevant for a general audience as well.

**Knowledge exchanges and capacity building:**
At the portfolio level, the MedPCU will capacitate Child Project teams with knowledge and training that can help them to deliver better project results and achieve greater impact. The identification of topics and modalities of exchange (face-to-face, virtual meetings, Communities of Practice, Expert visits, Study Tours, manuals, among others) will be defined at the beginning of the Programme implementation. Preliminary topics could include:

---

24 In line with both UN Environment and GEF policies on branding and use of logos.
25 Graphic novel or “graphic journalism” is an increasingly popular literary genre that uses comics and poignant texts to explain complex matters. It is a compelling way of storytelling for scientific dissemination.
26 A mix of radio and audiobooks, podcasts are a very incisive and entertaining way of sending messages across and inform and spark debate on pressing issues. They are easy to share and can reach a vast and varied audience.
27 Useful guidance can be found in the following publications: “The Art of Knowledge Exchange. A Results-Focused Planning Guide for the GEF Partnership” 2015 (https://www.thegef.org/sites/default/files/publications/GEF_WB_AoKE_English.pdf);
1) Gender mainstreaming and stakeholders’ engagement;
2) Scientific communication: bridging the gap between scientists/technical practitioners and media specialists;
3) Lessons learned from the MedPartnership and the ClimVar and ICZM projects.

It is expected that these knowledge exchanges will further empower project stakeholders, enhance cooperation, strengthen the institutions they represent and ultimately influence policies and norms for better management of natural resources in coastal areas.

At the policy-and decision-making level, efforts will be directed at strengthening the science-policy interface through activities that bring science closer to those responsible for developing policies and taking decisions. These may include workshops to identify innovative solutions to promote collaborations between scientists and governments to foster policies and decisions that promote the shared vision of a sustainable Mediterranean.

Additionally, Child Projects will participate in learning exchanges by twinning with other relevant GEF IW projects as facilitated by the GEF IW:LEARN Project.

Moreover, the MedPCU will support specific capacity building activities foreseen by each Child Project by taking stock and amplifying results through the programme-wide outreach. These may include the development of additional knowledge management and technical tools to build the capacity of Contracting Parties to manage data that can contribute to monitoring the MedProgramme’s progress to impacts.

**Technical reports and scientific publications:**
The MedPCU will ensure that relevant scientific reports and scientific peer-reviewed publications are prepared by the various Child Projects providing technical information about the achievements of the Programme.

**Engagement with media and testimonials:**
The MedPCU will reach out to a different number of media outlets and journalists with a view to establish long-lasting collaborations. To this end, Child Projects will be asked to liaise with national and local media of the project countries (for instance, by providing the MedPCU with a list of relevant contacts). A series of direct interactions with communications specialists, media experts and social media influencers is foreseen throughout the duration of the Programme to increase mutual understanding and flow of information. The MedPCU will also reach out to renowned personalities from different realms (such as art, sports, entertainment or fashion) to invite them to serve as ambassadors for the Programme and raise awareness about the main environmental challenges (and solutions) in the coastal areas of the Mediterranean. Child Projects will be prompted to suggest names, and facilitate contacts when possible, of suitable and potential “goodwill ambassadors” of relevance in the region.

**Participation to global campaigns, events and processes:**
Experiences and lessons learned from the MedProgramme will be of relevance for a number of global processes shaping polices related to the sustainable management of natural resources in coastal areas. In turn, global processes are important for the MedProgramme to align with national, regional and global priorities and be receptive to new “waves” (policies, socio-economic trends, tech advances, etc.). MedProgramme activities in this sense will build on existing successful campaigns, for example the “ICZM Mediterranean awareness-raisning Strategy (MARS)” and the Mediterranean Coast Day celebrations of the MAP system.

Contribution to events will take different forms, ranging from physical attendance, production of specific products, content and multimedia material to be packaged in suitable products, among others. Examples of processes and events that could be relevant for the MedProgramme include the conferences devoted to the 2030 Agenda for Sustainable

---

"Becoming a Knowledge-Sharing Organization”2016
(http://documents.worldbank.org/curated/en/306761478498267644/pdf/109809-PUB-Box396311B-PUBLIC-DOCDATE-11-2-16.pdf); and
Development and its Sustainable Development Goals (SDGs), the United Nations Environment Assembly (UNEA), Mediterranean-wide policy-dialogues, the UN Environment campaigns against chemical and plastic pollution, the EU Development Days and other key gatherings at the EU level, International Days (such as Environment Day, World Water Day, Health Day, etc.), among others.

Specific guidance on how to concretely contribute (format, frequency, purpose, etc.) to each of the aforementioned activities will be provided during the initial phase of the Programme as a result of targeted consultations carried out by the MedPCU. The full KM Strategy of the MedProgramme is annexed to each Child Project document for transparency and ease of reference.

Output 1.3: Mechanisms to promote the broader adoption and replication of the successful policies, practices and technologies implemented under the MedProgramme available for stakeholders of the Programme.

The effectiveness of regional level processes presently in place in the Mediterranean region for the dissemination of best practices, and raising awareness on the results of ongoing efforts, is not adequate to fully capture the opportunities for replication and broader adoption of the policies, practices, technologies, investments in infrastructure, management plans, institutional reforms, etc., that will be developed and implemented through the MedProgramme. To demonstrate how to overcome this obstacle, two highly informative National Replication Atlases – translated in relevant languages, highlighting areas and situations where replication of MedProgramme’s successful interventions should preferentially occur – will be produced to stimulate replication and encourage regional and global dialogue. The MedPCU will lead the participatory process to collect and present the inputs.

Component 2: Coordination and synergies

The Programme’s monitoring system supports the implementation of Child Projects, ensures their consistency with the overall Programme objectives, and helps capture synergies among projects and partners. Political attention at the national and regional levels, and active stakeholder participation is maintained throughout the implementation of the Programme through the development of an effective and innovative communication strategy.

Outcome 2: The coordination and learning among all Child Projects, consistency with the Programme objectives, and synergies among projects and partners, strengthened.

Output 2.1: Monitoring mechanism of MedProgramme progress to impacts established.

Periodic MedProgramme Bulletins will be published (every six months or on a quarterly basis) together with a regular MedProgramme newsletter, whose frequency will be adjusted to number of news, events, achievements to be reported, to showcase progress of the Programme as a whole and of individual Child Projects, including highlights of results, success stories and project events, and relevant global, regional and national relevant meetings and events. It will be one of the primary tools for tracking achievement of targets and milestones for all Child Projects, based upon the corresponding results frameworks. Bulletins will feature a “journalistic” style making the content appealing for a wide range of audiences. Therefore, all Child Projects are expected to contribute to these Bulletins with different types of inputs in order to document their activities and progress, such as high-quality images, articles, statistics, quotes, interviews, footage, among others.

28 The GEF ID: 9272 Amazon Sustainable Landscapes Program newsletter will be used as example for the production of the MedProgramme newsletter.
The output will also ensure that reporting across all Child Projects on project technical and financial reporting obligations are coordinated, namely:

Planning requirements:
- Annual workplan by quarter;
- Annual budget forecast by component and by quarter (linked to workplan above); and
- Annual procurement plan.

Reporting requirements:
- Quarterly expenditure reports;
- Quarterly progress reports against the workplan activity plan;
- Annual Project Implementation Review (GEF format); and
- Annual co-finance report.

**Output 2.2:** Mechanisms in place to establish synergistic interactions among Child Projects and with other relevant initiatives and stakeholders, and to take stock of progress and challenges at the MedProgramme level.

The main identified mechanism will consist of the organization of major regional events: the MedProgramme Annual Stocktaking Meetings (ASM).

**The Annual Stocktaking Meetings (ASM)** are one of the milestone activities of the MedProgramme. They are major regional events aiming to establish synergistic interactions among Child Projects and with other relevant initiatives and stakeholders, including with all other Mediterranean countries not participating in the MedProgramme.

ASMs hold a two-fold objective: 1) provide a forum for peer-to-peer learning among the Programme portfolio; 2) catalyze regional and global attention on the progress made towards impact in the entire Mediterranean region; and 3) enable adaptive management at the Programme level.

The ASMs will be an occasion for face-to-face knowledge exchanges, south-south and north-south learning, and promotion of the broader adoption of MedProgramme approaches and solutions. Project managers, stakeholders and beneficiaries will have the opportunity to learn from each other, tap into respective tacit knowledge, and at the same time benefit from experiences and expertise generated by GEF and non-GEF projects and other relevant experts in different disciplines with diverse backgrounds. Moreover, Child Projects will have the chance to showcase their implementation advancement, discuss problems encountered, and engage with a broad audience of peers and stakeholders. The participation of regional and global media will raise public awareness across the Mediterranean countries and beyond. These knowledge exchanges will further enhance cooperation, strengthen the institutions they represent and ultimately influence policies and norms for better management of natural resources in coastal areas.

The meetings will involve: all Child Projects and representatives of the Governments of the participating countries, the MedProgramme’s implementing and executing agencies, the GEF Secretariat and Independent Office of Evaluation (IOE), Convention Secretariats, the UN Environment Global Programme of Action (GPA), as well as major regional and global NGOs, MAP partners, representatives of those Contracting Parties to the Barcelona Convention not participating in the MedProgramme; bilateral and multi-lateral donors, International Financial Institutions (IFIs), the Union for the Mediterranean (UfM), other regional intergovernmental organizations (OSS, etc.), and major private sector coastal area.

---

29 Normally this reporting is done on a semi-annual basis, however, the Implementing Agency has requested for these reports to be produced on a quarterly basis during the first year of the MedProgramme’s execution.
30 The importance of, and need for stocktaking meetings emerged during the execution of the Strategic Partnership for the Danube and Black Sea Basin, the first GEF experiment in multi-project programs.
actors, water users, tourism associations and the shipping industry. Following a dedicated stakeholder analysis, other relevant groups will also be invited to participate in these events, including representatives of faith-based leaders, women’s organizations, youth organizations, fashion/art/sports groups, and media specialists, amongst others.

The Annual Stocktaking Meetings will also serve as adaptive management strategy tool at the MedProgramme level. Through these major meetings all issues of concern related to changes in political will or instability in the recipient countries will become manifest and allow for timely adaptive management responses at both the specific Child Project and at the Program levels. This critical function of the ASM will be played in advance of the Project Steering Committee in order to prepare working documents and decisions for the deliberation of the countries.

All project partners are expected to attend, and contribute to, the ASMs. They will be organized by the MedPCU in cooperation with all Child Projects and country representatives and will take place on a rotation basis in different locations in the countries participating in the MedProgramme.

The ASM will be chaired by the Coordinator of the Barcelona Convention. Its design, objectives and architecture will be defined during the first year of MedProgramme operation and approved at the Child Project 4.1 Steering Committee level. The first ASM will be held during the second year of MedProgramme operation.

**Output 2.3: Cooperation and synergy with IW: LEARN**

The results produced by the MedProgramme (hot spots of coastal/marine pollution and habitat degradation, implementing ICZM and nexus planning, conjunctive surface water and groundwater management, protecting coastal groundwater-related ecosystems and coastal/marine biodiversity) will substantially contribute to the GEF knowledge base and to relevant GEF process, events and activities involving the four focal areas of International Waters, Chemicals and Waste, Biodiversity, Climate Change.

The MedProgramme will closely collaborate with the GEF International Waters Learning and Resource Exchange Network (IW:LEARN) Project to facilitate uptake of lessons learned and knowledge exchange from/to the MedProgramme portfolio. Cooperation in the following activities will be particularly addressed:

- Participation in the GEF International Waters Conferences (landmark biannual events of the IW portfolio). The first MedProgramme contribution is expected for the 10th edition of the IWC in 2020.
- Production of Experience Notes (short case studies) produced by Child Projects to showcase worthy results and disseminated through IW:LEARN channels and the MedProgramme KM platform.
- Participation in IW:LEARN Twinnings with other GEF relevant projects and programs.
- Contribution to IW:LEARN.net with specific content (i.e. data visualization).
- Contribution to social media, news, events, etc.
- Participation in GEF Communities of Practice (CoPs) on IW, CW, when relevant.

While there is no single equivalent platform for chemicals and waste (Stockholm and Minamata Convention), this output will also include collaboration and synergy with the main platforms identified in the baseline Knowledge Management mapping, and particularly the Stockholm Convention website and platform, the SAICM knowledge management platform being developed under a SAICM GEF project (GEF ID: 9771), and MapX which is developing tools for the management, visualization and assessment of site-specific data on hazardous waste stockpile locations and quantities.

**Output 2.4: Monitoring mechanism to assess progress on gender actions across the MedProgramme in place**

Under this output, a mechanism will be established to ensure a portfolio-wide review and monitoring of gender actions taken by the different Child Projects, in pursuit of the common gender and socioeconomic goals set out in the Gender
Mainstreaming Strategy. As the Strategy provides the scope for devolved gender activities, mainstreamed through the particular ambit of each Child Project, having a coordinated monitoring system for tracking gender-related progress to impacts will ensure the overall coordination, implementation and execution of the Gender Mainstreaming Strategy.

Annual assessments will be undertaken to measure progress on the implementation of the gender action plans developed for the Child Projects, and a final assessment will showcase overall progress achieved towards the advancement of gender equality through the actions of the MedProgramme, and potential strategies for scaling up successful approaches to further promote gender equality in the region.

4) INCREMENTAL COST REASONING, EXPECTED CONTRIBUTIONS FROM THE BASELINE AND CO-FINANCING, AND GLOBAL ENVIRONMENTAL BENEFITS

Through Child Project 4.1 the GEF TF resources will provide incremental value across a range of project interventions to reduce land-based sources of marine pollution, harmful chemicals and their transboundary impacts, enhance resilience of coastal ecosystem and biodiversity to climatic impacts and human induced degradation, improve knowledge exchanges and management, and foster gender equality. The Project will build on a strong baseline of knowledge platforms, databases, initiatives and projects on knowledge/information sharing in the Mediterranean region. Against this baseline, the MedProgramme will generate new data and develop additional capacity of beneficiary countries to reduce pollution in marine and freshwater coastal bodies, increase resilience to climate change, improve the governance of water resources, promote the nexus approach and protect biodiversity and ecosystems.

The objectives that this Child Project will strive to achieve are incremental with respect to the achievements expected by every single Child Project, as they will focus on expanding the overall impact of the Programme through effective coordination, dissemination and communication mechanisms by:

- Establishing interconnectivity across countries that are using their GEF STAR allocations for protection of biodiversity, something that would not be achievable through small, isolated projects;
- Expanding the scale of impacts achieved by individual investments;
- Promoting monitoring and identification of best practices and results;
- Communicating the positive results (through the web, media and other means) achieved under the Programme to catalyze rapid changes by all stakeholders and decision makers;
- Measuring progress to impacts.

Box 1 Overview of the objectives of the GEF Focal Areas addressed by the MedProgramme

<table>
<thead>
<tr>
<th>GLOBAL BENEFITS</th>
</tr>
</thead>
<tbody>
<tr>
<td>International Waters Focal Area - The goal the International Waters Focal Area is to foster collective management for transboundary water systems and facilitate implementation of the full range of policy, legal, and institutional reforms and investments contributing to sustainable use and maintenance of water dependent ecosystem services.</td>
</tr>
<tr>
<td>Chemicals and Waste Focal Area - The goal of the Chemicals and Waste Focal Area is to prevent the exposure of humans and the environment to harmful chemicals and waste of global importance, including POPs, mercury and ozone depleting substances, through a significant reduction in the production, use, consumption and emissions/releases of those chemicals and waste.</td>
</tr>
<tr>
<td>Biodiversity Focal Area - The goal of the Biodiversity Focal Area is to maintain globally significant biodiversity and the ecosystem goods and services that it provides to society. It includes focus on the establishment and effective management of coastal and near shore protected area networks to increase the representation of globally significant marine ecosystems in protected area systems.</td>
</tr>
<tr>
<td>Climate Change Focal Area: The goals of the Climate Change Focal Area are to reduce the vulnerability of people, livelihoods, physical assets and natural systems to the adverse effects of climate change; strengthen institutional and technical capacities for effective climate change adaptation; and integrate climate change adaptation into relevant policies, plans and associated processes.</td>
</tr>
</tbody>
</table>

5) INNOVATION, SUSTAINABILITY AND POTENTIAL FOR SCALING UP
It is the first time that several GEF focal areas join forces for the implementation of a Strategic Action Program through a coordinated set of full-fledged projects in fostering the implementation of measures for the protection and sustainable use of a major transboundary waterbody such as the Mediterranean Sea LME; thus achieving multiple benefits at the national, regional and global levels, and providing a collective response to regional and global soft and binding international environmental agreements. This pioneering initiative could lead the way to the systematic adoption of programmatic approaches in IW SAP implementation whenever the consolidation of transboundary cooperation frameworks will allow, and the complexity of the drivers of degradation will require.

Within this innovative context, Child Project 4.1 will play a key and innovative role in ensuring coordination and consistency to MedProgramme’s objectives among all Child Projects, thereby enhancing the effectiveness of the Programme in achieving stress reduction in the identified hot spots. Moreover, Child Project 4.1 will devote efforts through innovative KM coupled with communication initiatives and events, to foster the broader adoption of MedProgramme’s demonstrations in the fields of coastal management, aquifer and groundwater dependent ecosystems protection and management, treated wastewater reuse, watershed rehabilitation, reduction of POPs and nutrients discharges, marine biodiversity protection.

It is expected that the KM platform and tools, together with the experience gained by the Executing Agency in outreach, communication and advocacy, will continue to support the action and the goals of the Barcelona Convention and its Secretariat beyond the life of MedProgramme.

CP4.1 aims to proactively involve key stakeholders such as the private sector\textsuperscript{31} to explore opportunities and concrete possibility for investments and generation of processes in parallel with the execution of the MedProgramme and beyond its lifespan. This strategy should allow achieving an impact which is more than the sum of the benefits generated by each Child Project. Moreover, the involvement of the private sector in particular, could make long terms sustainable the actions/activities executed by CP4.1, and more in general by the MedProgramme. For example, banks could decide to get actively involved in supporting coastal plans and resources management plan developed under the MedProgramme, or the insurance sector could develop products to support the efforts of the countries in decreasing the risk of coastal areas against the adverse effects of climate change.

Child Project 4.1 also provides the gender support structure to the MedProgramme portfolio, through the Gender Mainstreaming Strategy (see Annex Q). A pioneering approach, this gender focus will kickstart the conversation in the region on the cross-sectional links between gender and the environmental security domain – boiling down to the specifics of chemicals and waste, transboundary water issues (TDA update), pollution hotspots, biodiversity stress, water-food-energy security nexus and climate change. In compliance with GEF and UN Environment gender mainstreaming mandates, Child Project 4.1 represents an innovative approach towards targeting gender inequalities in the region, and will provide an indispensable example to future interventions, as well as an inventory of Mediterranean-specific information and data.

A.2. CHILD PROJECT? IF THIS IS A CHILD PROJECT UNDER A PROGRAM, DESCRIBE HOW THE COMPONENTS CONTRIBUTE TO THE OVERALL PROGRAM IMPACT.

Child Project 4.1 will play a critical role within the framework of MedProgramme. It will support and facilitate the replication and broader adoption of the stress reduction measures – policy, legal and institutional reforms, and investments – implemented through the various Child Projects, disseminate experiences and lessons learned, promote gender mainstreaming, and allow to monitor progress towards the expected impacts.

\textsuperscript{31} As part of the project inception meeting concrete ways to facilitate private sector involvement/uptake of results will be considered during the preparation of the project communication strategy in the context of the MedProgramme Knowledge Management Strategy
The MedPartnership project - predecessor of MedProgramme - was the first large scale GEF multi-focal area (IW, CW, BD) co-funded initiative including a particular focus on setting the stage for replication of best practices and successful demonstrations in the field of stress reduction. This innovative thrust of the Partnership on promoting the replication of “stress reduction” practices required a methodological effort in order to define the conceptual framework, and the correct context for broader adoption. The framework defined by the MedPartnership project targeted the stress reduction practices (technologies, infrastructure, behaviors, approaches, policies, laws, organizational setups, capacity building) being demonstrated and successfully tested in the region through investments by various actors, and/or the pilot demonstrations conducted under MedPartnership itself.

The MedProgramme has adopted the “broader adoption” framework developed by MedPartnership, organized by categories of transboundary concerns (see below), as identified by:

- TDA findings;
- SAP MED and SAP BIO commitments;
- Stockholm Convention NIPs and Minamata MIAs where available;
- National Action Plans of each Mediterranean country;
- GEF IW and CW strategic priorities.

<table>
<thead>
<tr>

<td>Land Based Pollution (point and non-point sources), Anthropogenic Pressures on Coastal Zones Habitats and Resources, impacts of Climate Variability and Change.</td>
</tr>
<tr>
<td>Conflicts among users and uses of coastal resources, considering also future climatic scenarios.</td>
</tr>
<tr>
<td>Conversion of Critical Habitats</td>
</tr>
</tbody>
</table>

In addition to supporting the implementation of all the above priority stress reduction measures through Child Projects 1.1, 1.2, 1.3, 2.1, 2.2 and 3.1, the MedProgramme will strive to further expand the adoption of such measures in the region, and to improve the sustainability of the results that will be achieved by the entire Programme, through the Child Project 4.1. This objective will be reached by ensuring that:
• Experience and knowledge generated through the Programme’s Child Projects is fully and systematically shared across Program countries, and the Mediterranean Basin;
• Effective coordination among MedProgramme agencies and Child Projects is in place, and that the Programme’s progress will be monitored and reported throughout the region.

A.3 **STAKEHOLDERS.** IDENTIFY KEY STAKEHOLDERS AND ELABORATE ON HOW THE KEY STAKEHOLDERS ENGAGEMENT IS INCORPORATED IN THE PREPARATION AND IMPLEMENTATION OF THE PROJECT. DO THEY INCLUDE CIVIL SOCIETY ORGANIZATIONS (YES /NO)? AND INDIGENOUS PEOPLES (YES /NO)?  

Stakeholder participation is an inherent part of the structure of MAP Barcelona Convention system where the 22 Contracting Parties are represented by their respective MAP focal points. Within each country MAP and its RACs have designated focal points that are responsible for the co-ordination of specific actions. In addition, about 100 NGOs and IGOs, MAP partners are participants to the MAP Barcelona convention system meetings.

It should also be stressed that stakeholders participated in the formulation of the TDA-MED, SAP-MED, SAP-BIO and countries NAPs, on which the present Programme is based. In summary, the key stakeholders in the that Child Project 4.1 will strive to involve at national level include:

• Public Sector: ministries responsible for water resources; environment; spatial and development planning; transport; tourism; fisheries; industry; maritime affairs; health; fire-fighting; community development; education; culture and local government authorities.
• Private Sector: national and regional organizations representing: farmers; fisher folk; manufacturers/ industrialists; tourism and aquaculture sector; banks; insurances.
• Non-governmental Organizations (NGOs): national trusts; conservation associations; women’s organizations; community-based organizations (CBOs);
• Scientific community: researchers; sociologists; environmental managers; engineers (water, civil, environmental); environmental economists; biologists; climatologists, geographers, oceanographers; teachers; curriculum specialists; media practitioners;
• General public such as the entire coastal population of the Mediterranean Basin (in particular those living in identified hotspots and sensitive areas) and the 176 million tourists visiting the Mediterranean annually.

An important guidance for the systematic involvement of relevant stakeholders will be provide by the Mediterranean a Strategy for Sustainable Development 2016-2025 (MSSD), adopted by 19th Conference of the Contracting Parties to the Barcelona Convention. The MSSD calls among others, for the engagement of the private and finance sectors as key partner, notably in in the emerging green and blue economy, not only through corporate social responsibility, but also through more sustainable consumption and production processes. The MedProgramme will work in synergy with the process associated to the MSSD benefitting from its results as well as supporting specific activities related to the involvement of the private sector or any other strategic actors relevant to the objectives of the Programme.

One of the goals of CP4.1 will be to ensure that the private sector, as well as other key stakeholders as identified by the stakeholder analysis that will be developed each Child Project, will be exposed to the experiences gained through other Child Projects, and actively share the lessons learnt that may have Mediterranean-wide implications. The ultimate objective of this process is to engage with these stakeholders to explore opportunities of investments, active involvement and generation of processes in parallel with the execution of the MedProgramme and beyond its lifespan.

---

32 As per the GEF-6 Corporate Results Framework in the GEF Programming Directions and GEF-6 Gender Core Indicators in the Gender Equality Action Plan, provide information on these specific indicators on stakeholders (including civil society organization and indigenous peoples) and gender.
At a regional and global level, the stakeholders will be the various signatories to the relevant Multilateral Environmental Agreements (e.g., Convention on Biological Diversity, Basel Convention, UNFCCC, UNCCD, Rotterdam Convention, Stockholm Convention and Minamata Convention), voluntary instruments like the Strategic Approach to International Chemicals Management (SAICM) and all individuals and organizations associated with the achievement of the 2030 Sustainable Development Goals.

The Terminal Evaluation of MedPartnership observed that in spite of the wide stakeholder engagement during implementation of the MedPartnership, the involvement of NGOs, private sector, and Mediterranean countries that are not eligible for GEF funding could have been greater. In the execution of the MedProgramme and its Child Projects the Executing Agency (UN Environment/MAP) will foster opportunities to more closely involve NGOs and the private sector in project activities and to engage more closely with non-GEF eligible countries that share the LME. Child Project 4.1 will play an important role in this effort by broadly disseminating information on, and the progress and results of MedProgramme, stimulating all other Child Projects to design and implement effective stakeholder’s participation strategies, and promoting involvement in the project’s milestone events of relevant NGOs, of the private sector (in particular the tourism industry), and of all non-beneficiary Mediterranean countries.

Regarding specific stakeholders, each Child Project shall undertake its own research and analysis based on the respective project objectives to identify partners, target groups and beneficiaries. This analysis is essential to understand who the different players are, their expectations and interest, their characteristics, commitment and constraints, their influence over others, etc. The MedProgramme KM Strategy will support the jump-start and continuous engagement of these groups at the programme level with targeted actions and outreach tools.

Opportunities to enlarge the existing partnership of the MedProgramme to increase knowledge sharing, promote broader adoption and reinforce ownership should not only be welcomed, but actively sought. Reaching out to different stakeholders, be they individuals, organizations or companies, and engage them directly in some of the MedProgramme activities will produce a series of distinct advantages:

• It will contribute to transformational change: groups that are likely to evade the radar of “usual suspects” mapping (intended as classic stakeholders for environmental projects) will be intentionally targeted, moving away from the old-fashioned top-down view of passive beneficiaries of knowledge to a new vision in which conscious citizens are regarded as source of knowledge and potential allies in the strive against environmental degradation; for example, a collaboration with Faith-Based Organizations to prepare a workshop or joint statements disseminated through their networks would tremendously increase the chances to inform and influence a large portion of general public that is not reached by traditional channels; or a partnership with a fashion magazine to sensitize readers about sustainable business in coastal areas;
• It will facilitate a faster achievement of the Programme results: for example, a partnership with tourism institutions in the different participating countries could accelerate the adoption of more sustainable touristic habits to reduce pollution load into water bodies and increase the acceptance and reuse of treated freshwater for human consumption;
• It will raise the profile of the GEF investments in the Mediterranean and of the countries and partners participating to the effort. A partnership with National Geographic for instance, or with national TVs and radio stations, could enhance the dissemination of knowledge and results generated by the MedProgramme as well as by related initiatives and policy-frameworks, like the Barcelona Convention;
• It will further stimulate a sense of ownership and contribute to the sustainability of Programme results: making tight connections for example with the Bibliotheca Alexandrina to host a permanent or temporary exhibition about the MedProgramme, which could then travel around museums of the entire Mediterranean basin (starting with participating countries), could ensure that the legacy of the MedProgramme will continue to inspire people even after the program closure.
• It will give additional means to further expand Programme activities: by adding ad hoc co-financing (in-cash or in-kind) to produce, for example, a publication or a short movie for the general public, the MedProgramme could
gain positive returns in terms of resources and prestige. Bringing together renowned artists in the region and a business organization to jointly produce a graphic novel on the MedProgramme, for instance, could be rewarding under many aspects.

The MedProgramme holds the possibility to create a fertile hub for different partners to come together and share experiences and solutions to common challenges related to environmental degradation and pollution of freshwater/marine waters in the region. The private sector is a prime stakeholder in this effort and should be always engaged to cross-fertilize MedProgramme’s interventions. As emphasized in the GEF 2020 strategy: “Coordination failures abound in environmental management, in part because of the prevalence of “tragedy of the commons” issues. Moreover, the complexity of environmental challenges requires that actions be taken simultaneously by many different stakeholders to be effective. Partnerships with the private sector, civil society, research groups, and indigenous and local communities are vital in this regard.”

The MedProgramme was born under the auspices of the GEF 6 Replenishment and fully embraces the integrated approach that is further strengthened in the GEF 7 Programmatic directions. The importance of tightening relations with the private sector is again stressed in the GEF 2020 strategy: “The IAPs (Integrated Approach Pilots) will give special attention to engaging the private sector and improving evidence-based design and implementation to enhance learning and the effectiveness of the IAP interventions.”

Furthermore, in strengthening collaboration with a vast and diverse, yet relevant, groups of stakeholders, the MedProgramme’s Child Project 4.1 will contribute to the vision encapsulated in the Sustainable Development Goal 17: “A successful sustainable development agenda requires partnerships between governments, the private sector and civil society. These inclusive partnerships built upon principles and values, a shared vision, and shared goals that place people and the planet at the center, are needed at the global, regional, national and local level.”

A.4. **Gender Equality and Women’s Empowerment.** Elaborate on how gender equality and women’s empowerment issues are mainstreamed into the project implementation and monitoring, taking into account the differences, needs, roles and priorities of women and men. In addition, 1) did the project conduct a gender analysis during project preparation (yes ☑/no ☐)?; 2) did the project incorporate a gender responsive project results framework, including sex-disaggregated indicators (yes ☑/no ☐)?; and 3) what is the share of women and men direct beneficiaries (women X%, men X%)? 33

---

33 Same as footnote 8 above.
Adopting this gender focus meets organizational priorities of the GEF and UN Environment, and pioneers the first regional move towards integrating a cohesive and coordinated approach to impact upon the current status quo. Indeed, both the GEF and UN Environment have prioritized delivering inclusive and gender-responsive environmental results, as well as adaptation and mitigation solutions towards climate risks. Having launched its initial gender policy in 2011, the GEF approved a reinforced policy in November 2017 at the 53rd Council Meeting, shifting the focus from a ‘gender-aware, do no harm’ approach to a ‘gender-responsive, do good’ approach. This requires robust standards in the design, implementation and evaluation of GEF activities, and introducing measures that will allow the GEF, over time, to better leverage strategic opportunities to address gender gaps critical to the achievement of global environment benefits. UN Environment, too, recognizes the role of gender equality as a ‘driver of sustainable environment development’, particularly to enhance environmental security and climate resilience; to assuage the stresses on natural resources and dependent communities, including unsustainable management of coastal resources; to mitigate risks arising from pollutions and chemicals (particularly POPs and mercury) in the region; and, to preserve the health of large marine ecosystems (like the Mediterranean) which provide environmental and economic services to coastal populaces. Overall, the organization focuses on the increased visibility and capacity of vulnerable groups in sustainable development policy- and decision-making.

Child Project 4.1 will provide support to all other Child Projects by facilitating adherence to the principles enshrined in the Gender Mainstreaming Strategy of the MedProgramme as well as coherence of gender-responsive action throughout the portfolio. Particular activities for this target will be: knowledge exchanges and capacity building products whose topics and modalities (face-to-face, virtual meetings, Communities of Practice, Expert visits, Study Tours, manuals, among others) will be defined during MedProgramme implementation. The MedPCU will dedicate resources to periodically engage a Gender Specialist to advise on implementation of the Gender Mainstreaming Strategy and to assist in monitoring progress towards the targets and milestones associated with the gender action plans for each of the Child Projects, thereby ensuring complementarity of regional and national gender actions, in project-specific contexts.

Box 2 The gender mainstreaming approach of the MedProgramme

The **Gender Mainstreaming Strategy of MedProgramme** adopts a transformative approach, positing a gender equality vision for the MedProgramme that questions established categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is not an end (goal) of the MedProgramme—rather, a means (process) to an end (greater gender equality). This approach reflects also the normative standards defined by the European Institute for Gender Equality (EIGE), which stipulates the importance of identifying gender mainstreaming as a process because it:

“Ensures that policy-making and legislative work is of higher quality and has a greater relevance for society, because it makes policies respond more effectively to the needs of all citizens – women and men, girls and boys. Gender mainstreaming makes public interventions more effective and ensures that inequalities are not perpetuated. It does not only aim to avoid the creation or reinforcement of inequalities, which can have adverse effects on both women and men. It also implies analyzing the existing situation, with the purpose of identifying inequalities, and developing policies which aim to redress these inequalities, and undo the mechanisms that caused them”.

The full gender Mainstreaming Strategy is attached as Annex Q and will be applied across the entire portfolio of intervention of the MedProgramme.

**Targets and Components of MedProgramme’s Gender Mainstreaming Strategy:**

**Address gender-blind hurdles with gender-differentiated consequences.**

---

34 See here for the latest GEF Gender Mainstreaming guide (EN). GEF. (2017) (publication).
Although formal gender equality rights and guarantees are almost ubiquitous in the Mediterranean nations, this Strategy recognizes that gender-neutral policy language may not result in gender-egalitarian outcomes, when implemented in a gendered environment, influenced by gender imbalances and biases. The neutral policies and laws, which are veritably gender-blind, often work in concert with social tenets, traditional norms, constitutional interpretations, and cultural expectations in ways that may stymie the advancement of gender-responsive practices. Thus, in tandem with country partners and implementing agencies, the MedProgramme will stipulate the analysis of potential gender-neutral hurdles in project- and site-specific contexts to develop targeted action towards addressing the gender-differentiated consequences.

Mitigate gender-specific barriers and discriminatory norms.
Certain barriers and discriminatory norms are framed with gender-specificity, targeting one gender or more, against normative ideals that stipulate hegemonic social identities. Gender-specific barriers have tangible and invisible discriminatory outcomes, prejudices and stigma, and are often accepted, condoned and tolerated within the larger social framework. To address these barriers, attention, awareness and resources have to be accorded to address the effects of the multiplicity of social differences and gender norms to usher in disruptive change and assuage the gender burdens on specific demographic groups. The MedProgramme will, hence, develop dedicated project- and country-specific gender assessments and gender action plans for each of its constituent projects and from the preparation phase through to the concluding monitoring and evaluation stage of the project cycle, with objectives (relating to broader project objectives), transformative outcomes (relating to the wider focus of the project), means of verification and indicators.

Scale up gender-sensitive policies and deliver gender-responsive outcomes.
Building on the knowledge and analysis of gender-blind and gender-specific barriers, the MedProgramme will have the imperative to use consultative and participatory tools to conduct gender-differentiated beneficiary assessments and formulate gender-sensitive policies to address the same. These gender-sensitive policies will provide the basis for gender-responsive outcomes within the results framework of the different projects, by bringing transformative change towards: promoting equitable access to goods, services, status, and decision-making power (both within policy institutions and households); expanding the subjective and objective range of legal, social and psychological choices available to both men and women; breaking gender stereotypes, norms and patterns; and, providing the conducive environment, through capacity-building in policy institutions, governance structures and local bodies and awareness-raising among communities (particularly, male sensitization), for a pan-Mediterranean gender mainstreaming effort that is verifiable on all three accounts of accountability, transparency and incentive mechanisms.

To scale up and deliver these policies and actions, the MedProgramme will stipulate gender-related budget lines within the constituent projects, as dedicated resources need to be mobilized for positive impacts on the gender gap in the region.

A.5 Risk. Elaborate on indicated risks, including climate change, potential social and environmental risks that might prevent the project objectives from being achieved, and, if possible, the proposed measures that address these risks at the time of project implementation.

The risks related to Child Project 4.1 are presented in Table 3 below.

<p>| Table 3 Risks, risk levels and proposed mitigation strategies |
|-----------------|-----------|-----------------|
| <strong>Risks</strong> | <strong>Level</strong> | <strong>Mitigation Strategy</strong> |
| The implementation of the knowledge exchanges and the coordination activities among the various Child Projects and numerous national actions could be affected by government changes, hindering the pace | Medium | Enhancing the visibility and awareness of MedProgramme among national and regional stakeholders and engaging with other levels of government, such as regional governors and municipalities, is expected to generate longer term commitments, and offset risks from potential political changes at a national level. |</p>
<table>
<thead>
<tr>
<th>Issue</th>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project ownership: Low attendance of high-level decision-makers to knowledge exchange events could hamper desired impacts and effectiveness of knowledge outcomes.</td>
<td>Medium</td>
<td>The project team will plan ahead all KM events ensuring broad participation from countries and request that Child Projects nominate, on a rotating basis, key decision makers that can open the KM events and learn more about the program.</td>
</tr>
<tr>
<td>Unsatisfactory involvement of regional, national and local level stakeholders and civil society organizations.</td>
<td>Low</td>
<td>The project team will ensure that all relevant stakeholders are involved in the program. Each of the Child Project documents identifies the stakeholders that will be involved at the national level. Once all of the Child Projects are approved by the GEF CEO, a consolidated stakeholder matrix for each country will be prepared and an analysis will be done to ensure that all relevant regional stakeholders are included in the individual national projects.</td>
</tr>
<tr>
<td>Lack of full cooperation of all Child Projects in identifying and sharing lessons learned and successful policies and practices, participating in the design and production of modern dissemination tools, ensuring a regular flow of information on progress to impact indicators.</td>
<td>Low</td>
<td>The strong coordination role at the Programme level of the Steering Committee supported by the MedProgramme Manager, coupled with the affective monitoring function of the Annual Stocktaking Meetings, are expected to sustain Child Projects’ involvement in KM activities.</td>
</tr>
</tbody>
</table>
A.6. INSTITUTIONAL ARRANGEMENT AND COORDINATION. DESCRIBE THE INSTITUTIONAL ARRANGEMENT FOR PROJECT IMPLEMENTATION. ELABORATE ON THE PLANNED COORDINATION WITH OTHER RELEVANT GEF-FINANCED PROJECTS AND OTHER INITIATIVES.

The institutional arrangement and coordination of the Child Project 4.1 is illustrated in Figure 7.

Figure 7 Institutional Arrangements and Coordination Structure of the Child Project 4.1

**Implementing Agency (IA):** The GEF Units in the Ecosystems Division of UN Environment will serve as Implementing Agency (IA) for Child Project 4.1. The IA will be responsible for overall supervision of the project and will oversee its progress through the monitoring and evaluation of activities and through progress reports. The IA will report on the project implementation progress to the GEF and will take part in the Project Steering Committee (PSC). The IA will provide guidance and oversight of project execution by the Executing Agency (EA) including through the review and approval of work plans, budget allocations and budget revisions proposed by the Executing Agency.

**Project Steering Committee (PSC):** The PSC will be established and will carry out the function of a Project Board. The PSC will consist of: 1) beneficiary countries, the IA and the Executing Agency (EA) representatives; and 2) the MedProgramme Coordinating Unit (MedPCU) acting as Secretariat for the PSC. These are the Members of the PSC. Countries will be represented at the PSC at a technical, decision making level, e.g. national focal points. Following the model of the PPG MedProgramme Regional Consultation Meetings, the PSC meetings will bring together International Water stakeholders, with parallel technical working sessions combined with plenary discussion and approval of workplans to maximize transparency and joint working across the two Focal Areas.

It is anticipated that to ensure an efficient use of the resources, PSC of different Child Projects of the MedProgramme will be organized back to back. These meetings will dedicate one session to inform the countries about the progress made by the entire MedProgramme followed by several sessions dedicated to specific decisions to be made by the countries for each Child Project.
The Executing Partners (EP) will intervene at the PSC to present the progress made and support the Secretariat for the PSC by providing background information on substantive and technical issues, as well as on modification to the Project Document and its annexes presented to the PSC by the MedPCU. The role of the PSC is to:

- Oversee the project;
- Provide overall guidance and ensure coordination among all parties;
- Provide overall supervision for project implementation;
- Approve the annual work plan and budget;
- Oversee the implementation of corrective actions;
- Enhance synergy between the project and other ongoing initiatives related to the GEF International Waters Focal Area;
- Ensure full coordination of the project with the entire MedProgramme.

Additional stakeholder representatives from private sector, academia, CSOs, NGOs, etc. can be invited to join the PSC during the project execution as observers. At all times, the PSC and its activities will comply with the policies, conditions and regulations of the UN and the GEF.

**Executing Agency (EA):** The UN Environment/Mediterranean Action Plan (UN Environment/MAP) will serve as the Executing Agency (EA) for the entire project. The EA will report on the project implementation progress to the IA (including those activities executed by the Executing Partners). The EA will organize the PSC and host the MedPCU which will act as Secretariat to the PSC. The EA will be responsible for, inter alia, the following required activities to achieve the project objectives, outputs and outcomes:

- Establishing, hosting and supervising the MedProgramme Coordinating Unit (MedPCU);
- Acting as Secretariat for the Project Steering Committee (PSC);
- Ensuring that the project is executed according to the agreed work plan and budget;
- Review and submit required reporting obligations to the IA, including quarterly expenditure reports and annual Project Implementation report (PIR);
- Ensuring all procurement is done in compliance with Agency standards;
- Communicating with and disseminating information to the Executing Partners (EP) and other stakeholders.

The EA will ensure that all activities, including procurement of goods and services, are carried out in strict compliance with the rules and procedures of UN Environment and GEF. The EA will be responsible for the establishment, adequate staffing and uninterrupted functioning, throughout the project’s life span, of the MedProgramme Coordinating Unit (MedPCU).

**MedProgramme Coordinating Unit (MedPCU):**

During the project development phase of the Child Projects under the MedProgramme (GEF ID9607), particular attention was given to setting up a MedProgramme Coordinating Unit (MedPCU). The MedPCU was designed taking into consideration the high complexity of the MedProgramme. The staff under the MedPCU will have to deliver a multitude of cross-cutting functions across the Child Projects of the Programme. Moreover particular attention was given to cost efficiency by centralizing the overall Programme management into a single cost-cutting unit, thus avoiding duplication of project management units, functions, task and deliverables. This choice will also ensure timely and consistent execution of the Child projects of the MedProgramme, allowing at the same time transfer of lessons learned and cross-fertilization. It is anticipated that the MedPCU will be staffed with the following core positions:

- MedProgramme Coordinator (P4)
- Programme Officer CW (P3)
- Programme Financial Assistant (G5)
• Programme and Administration Assistant (G5)

In addition to this, the MedPCU operations will be supported during specific periods of the lifespan of the Child Project 4.1, by one Gender Specialist, one Knowledge Management Specialist and by a regional expert on International Waters, to be engaged through out-sourced contracts. The MedPCU will be established and hosted by UN Environment/MAP in Athens, Greece, following the successful model of the MedPartnership Project. The proposed organigram for the PCU is:

![Organigram of the MedProgramme Coordinating Unit](image)

**Figure 8 Organigram of the MedProgramme Coordinating Unit**

The MedPCU will be established, hosted and supervised by UN Environment/MAP (Barcelona Convention). The MedPCU will ensure coordination across the entire MedProgramme and the consistent execution of the seven Child Projects implemented by UN Environment and executed by MAP (Barcelona Convention), as well as the Child Project implemented by EBRD. In terms of MedProgramme coordination, the MedPCU will provide management functions to the Child Projects implemented by UN Environment and executed by UN Environment/MAP and EBRD.

The Unit will be responsible for, inter alia, the following tasks:

**Child Project 4.1 management services:**
- Manage the flow of information from the field and produce periodic monitoring reports, namely quarterly financial expenditure reports; annual expenditure forecasts and procurement plans; half-yearly narrative reports of progress including the annual Project Implementation Review;
- Initiate, validate, sign and implement legal instruments with all bilateral partners including executing partners and countries where appropriate;
- Organize travel and payment of DSA for staff and consultants as needed;
- Coordinate and support the project activities, namely the coordination and monitoring of the activities under the Child Project 4.1 and the execution of the Knowledge Management and Gender Mainstreaming Strategies;
- Organize the meetings of the Project Steering Committee (PSC) and serve as its Secretariat;
• Ensure the Project governance and oversight of the financial resources from the GEF investment and the co-financing delivered by the Project stakeholders.

Programmatic coordination:
• Ensure that the execution of the entire MedProgramme is aligned and integrated with the priorities of the Contracting Parties to the Barcelona Convention, its 2016-2021 Mid-Term Strategy and biennial Programmes of Work;
• Ensure that the execution of the MedProgramme Gender and Knowledge Management Strategies is consistent across the entire Programme.
• Establish a mechanism to monitor and evaluate progress towards the objectives of the MedProgramme as a whole.

MedProgramme Visibility:
• Represent the MedProgramme in global events and initiatives.
• Ensure that the Programme Annual Stocktaking Meeting is organized in a coordinated manner to efficiently serve the countries, IA, EA and stakeholders;
• Share the Project achievements, products/outputs with the Project and MedProgramme’s stakeholders;

Technical support (refer to detailed deliverables in Table 5 below):
• Provide staff time and expertise in guiding and advancing the execution of technical activities under the Project which will be fully executed by the MedPCU;
• Coordinate with administrative and technical staff on drafting and compiling tender documents as needed; advertise tenders where relevant; convene and/or contribute to tender review committees where appropriate;
• Coordinate with administrative and technical staffs on drafting and compiling tender documents as needed; advertise tenders where relevant; convene and/or contribute to tender review committees where appropriate

The cost of the MedPCU will be covered by PMC, cash co-financing provided by the Barcelona Convention and to a minor extent, by the projects budget as detailed in Table 4. The latter will be allocated specifically for Child Project 4.1 to run technical and substantive tasks as described in Table 5 below.

Staffing costs as %: 5% 3% 8%

1: Including travel costs of the MedPCU’s staff.
2: Details of the technical tasks executed by the MedPCU’s staff are provided in Table 5 below under the sections A.6 of the GEF CEO Endorsement Request Template
3: Breakdown of the 760,000 allocated for Technical Tasks: 485,000 US$ from CW grants for the Programme Officer CW and 275,000 US$ from IW grants for the technical support on TDA of the Med POL Officer.
Execution at National Level: The Beneficiaries Countries will designate a National Project Focal Point (NPFP) during the inception phase. The NPFP will act as the liaising person between the government, the EA and EP. The NPFP will be fully involved in the selection of the national consultants and experts which will support the execution of activities on ground under Components 1 and 2 of the Project. The NPFP will also facilitate collaboration with other country offices, as well as the MedProgramme Coordinating Unit (MedPCU). Moreover, special attention will be given in all countries to overcoming fragmentation across sectors in decision making related to project’s goals and activities.

Please refer to Annex H - Project Implementation Arrangements for further details on the specific roles and tasks of the MedPCU and the Executing Partners.

A.7 BENEFITS. DESCRIBE THE SOCIOECONOMIC BENEFITS TO BE DELIVERED BY THE PROJECT AT THE NATIONAL AND LOCAL LEVELS. HOW DO THESE BENEFITS TRANSLATE IN SUPPORTING THE ACHIEVEMENT OF GLOBAL ENVIRONMENT BENEFITS (GEF TRUST FUND) OR ADAPTATION BENEFITS (LDCF/SCCF)?
The MedProgramme will bring about a wealth of benefits at the national and local levels: from improved water security due to better coastal aquifer management, improved health of coastal populations due to elimination/reduction of pollution from harmful chemicals, and higher quality freshwater supply, to better and more sustainable livelihoods thanks to enhanced coastal management and integrity of coastal ecosystem services, to more sustainable tourism, to gender equity and more.

Based on the MedProgramme KM Strategy (see Annex P) and the knowledge management activities of all Child Projects and especially the Child Project 4.1, the following benefits will be accrued:

- Increased uptake of best practices and of cutting-edge knowledge generated across the portfolio of interventions, and the active participation of stakeholders in the IW:LEARN activities, Communities of Practice, and events;
- Improved capacity of key regional stakeholders, and of the global IW community, to build climate resilience, maintain coastal resources, protect biodiversity, and restore coastal ecosystems.
- Effective coordination and learning achieved among all Child Projects, consistency ensured with the Programme objectives, and synergies among projects and partners identified and fostered.

A.8 KNOWLEDGE MANAGEMENT. ELABORATE ON THE KNOWLEDGE MANAGEMENT APPROACH FOR THE PROJECT, INCLUDING, IF ANY, PLANS FOR THE PROJECT TO LEARN FROM OTHER RELEVANT PROJECTS AND INITIATIVES (E.G. PARTICIPATE IN TRAININGS, CONFERENCES, STAKEHOLDER EXCHANGES, VIRTUAL NETWORKS, PROJECT TWINNING) AND PLANS FOR THE PROJECT TO ASSESS AND DOCUMENT IN A USER-FRIENDLY FORM (E.G. LESSONS LEARNED BRIEFS, ENGAGING WEBSITES, GUIDEBOOKS BASED ON EXPERIENCE) AND SHARE THESE EXPERIENCES AND EXPERTISE (E.G. PARTICIPATE IN COMMUNITY OF PRACTICES, ORGANIZE SEMINARS, TRAININGS AND CONFERENCES) WITH RELEVANT STAKEHOLDERS.

Since the early 1990s there has been growing attention to the process of managing knowledge within organizations, mostly with the objective of improving performance and capitalizing on lessons learned. These efforts have gained a consolidated reputation which has led to establishing knowledge management (KM) as a recognized discipline.

Moreover, knowledge management is now viewed as an organization’s most valuable and strategic asset. There are many definitions of KM but it can be concisely described as the “systematic process to identify, capture, structure, value, leverage, and share an organization's intellectual assets to enhance its performance and competitiveness through a multidisciplinary approach”. KM is based on two critical activities: (1) capture and documentation of explicit and tacit knowledge, and (2) its dissemination amongst the intended audiences and stakeholders.

There are two key challenges: knowledge is difficult to assemble and it is difficult to encourage its use. Many managers see it as a time-consuming distraction from their core role. However, good knowledge management can reduce risks and increase efficiency through the re-use of proven approaches and avoidance of known pitfalls. It can also produce a virtuous circle as individuals and teams see their contributions recognized and re-used, thus encouraging further participation in the process. To this end, careful consideration of the different types of knowledge that will be generated throughout the MedProgramme life has been taken into account to make sure that intangible assets (tacit knowledge, intended as human and intellectual capital) as well as technical and codified information (explicit knowledge) are properly valued and managed through targeted means (such as a powerful project management tool) and activities that encourage continuous learning and exchange. Moreover, a right mix of innovation (defined as a process through which knowledge can be translated into new products, new services or new methods) and incremental innovation (building on and improving existing knowledge, products, processes and services) is sought in the strategy to increase overall Programme efficiency - better quality, higher data integrity, greater collaboration, streamlined processes, reduced times and lower costs.

A good knowledge management strategy is closely aligned with the overall vision, objectives and identified priorities of the organizations leading a given effort. In the case of the MedProgramme, due consideration of related KM guidelines
from the Global Environment Facility (GEF), the GEF/UNDP IW:LEARN project and UN Environment have been taken into account when developing the present strategy.

The policy recommendations emanating from the GEF-7 replenishment clearly refer to knowledge as a “critical asset of the GEF Partnership” and commend “the steps taken to build the GEF’s knowledge management systems and practices in GEF-6, as well as the increasing attention to learning and knowledge exchange in GEF projects and programs, notably the integrated approach pilot programs, and in outreach to recipient countries”. Moreover, the importance of bringing together different expertise through inclusive communities of practices to best tackle environmental degradation has similarly been reaffirmed in the Programming Directions of the GEF-7 replenishment, voicing “strong country demand for GEF to offer platforms where countries can come together around common challenges”.

The call for more investments in knowledge management systems and practices also stems from the results of recent GEF OPS (Overall Performance Studies) which have found that “the relevance of knowledge management to the GEF mandate has been increasingly recognized, and efforts to improve knowledge management in the partnership have been made on several fronts. The GEF2020 Strategy emphasizes “strategically generating knowledge” as a priority. In 2014, the policy recommendations in the GEF-6 Replenishment Document similarly emphasized “the importance of developing a knowledge management (KM) system that aims to improve the GEF partnership’s ability to learn by doing and thereby enhance its impact over time”. In addition, OPS6 reports that “multi-focal area projects are better at achieving global environmental and socio-economic outcomes at completion compared to single-focal area projects”.

Again, the GEF-7 Programming Directions note that “more complex programs and sets of Child Projects will tend to offer more entries for development links due to multi-sectoral approach, multi-stakeholder engagements and platforms, and potential for delivering socio-economic co-benefits, along with enhancing the sustainability of the associated investments. Child projects generally performed better than stand-alone projects on all rating dimensions, especially on execution quality, sustainability and M&E design. Child Projects have also improved in design and are now better linked to the overall program in terms of objectives, result based management and M&E.” This emphasis from the GEF on both, integrated knowledge management systems and holistic multi-focal area programmes, clearly sets the ground for a purposeful, concrete and action-orientated KM strategy for the MedProgramme.

The KM Strategy develop for the MedProgramme aims to maximize the MedProgramme impact by:

- Leveraging and systematically sharing knowledge assets generated by the Child Projects with the intended beneficiaries and audiences;
- Strengthening the science-policy interface (SPI) and influencing decision making through data and information sharing, capacity building, and regional stakeholder engagement;
- Supporting the objectives of the Barcelona Convention and the work of the MAP system through effective stocktaking and scaling up of programme results; and
- Fostering incremental innovation within GEF programmatic approaches and enriching the knowledge base of GEF Implementing and Executing Agencies.

In order to achieve these objectives, three interconnected functional levels have been identified to articulate the KM Strategy:

1. At the PORTFOLIO LEVEL to support the work of project managers and executing partners by providing project management tools and training to key regional stakeholders;
2. At the GENERAL PUBLIC LEVEL to share results, inform and influence target audiences by reaching out to and engaging with civil society, media, and representatives of non-scientific community;
3. At the POLICY- and DECISION-MAKING LEVEL to support the Contracting Parties of the Barcelona Convention, relevant decision makers in the region and the work of GEF Implementing and Executing Agencies by contributing to relevant regional policy processes and related GEF initiatives (particularly the IW:LEARN project).

Organizational coherence and strong synergies among MedProgramme Child Projects are considered critical to sustain effective knowledge sharing and ensure the successful achievement of the KM objectives. Careful consideration was given to the different types of knowledge that will be generated throughout the program life to ensure that intangible assets (tacit knowledge, intended as human and intellectual capital) as well as technical and codified information (explicit knowledge) are properly valued and managed.

Table 4 summarizes how each activity and tool the project will implement and utilize contribute to the different levels and are inscribed in one of the two components of Child Project 4.1.

Both the strategy and its implementation are critical to successful exploitation of knowledge. Many KM strategies fail not because there is something fundamentally wrong with them, but because they are not well implemented. There must be a good strategy, but also appropriate organizational structure, systems, and the right people to implement the strategy.

**B.1 Consistency with National Priorities. Describe the consistency of the project with national strategies and plans or reports and assessments under relevant conventions such as NAPs, NAPs, ASGM NAPs, MIAs, NBSAPs, NCS, TNAs, NCSAs, NIPs, PRSPs, NPFE, BURs, INDCs, etc.:**

Child Project 4.1 supports though knowledge management and communication/coordination activities the implementation of all MedProgramme’s actions, which all adhere to national priorities in project beneficiary countries. These priorities are enshrined in the National Action Plans for the implementation of SAP MED and SAP BIO, and are in line with the Barcelona Convention and its ICZM Protocol. The project will also enhance national compliance with global and regional agreements and action programmes, as well as contribute to the achievement of a number of SDGs targets.

**C. Describe the budgeted M&E plan:**

Project execution performance will be monitored through the following standard GEF M&E activities. The associated M&E budget and work plan is provided in Annex G-M&E Budget and Work Plan.

**Project start:**
A Project Inception Workshop will be held within the first 8 months of project start, with participation of those with assigned roles in the project organization structure. The Inception Workshop is crucial to building ownership for the project results and to plan the annual work plans for the first 2 project years. It is anticipated that the Inception Workshop will also be the de facto first meeting of the Project Steering Committee.

The Inception Workshop will address a number of key issues including:

- Assisting all partners to fully understand and take ownership of the project. Detail the roles, support services and complementary responsibilities of UN Environment, MAP and MedPCU staff vis à vis the project team. Discuss the roles, functions, and responsibilities within the project's decision-making structures, including reporting and communication lines, and conflict resolution mechanisms.
- Based on the Project Results Framework and the International Waters GEF Tracking Tool, the Annual Work Plans for the first two years will be finalized. Indicators, targets and their means of verification will be reviewed, revised (as needed) and agreed, and assumptions and risks will be re-checked.
- A detailed overview of reporting, monitoring and evaluation (M&E) requirements will be provided. The Monitoring and Evaluation work plan budget will be agreed and scheduled.
- Financial reporting procedures and obligations will be discussed.

Project governance meetings will be planned and scheduled, and the overall project governance mechanisms will be reviewed and further fine-tuned, giving particular attention to cost-efficiency, enhanced stakeholder ownership, and the continuity of efforts towards SAP implementation beyond the project life span. Roles and responsibilities of all project organization structures will be clarified, and a meeting/reporting calendar will be elaborated.

Together with the GEF approved Project Document, the Inception Workshop Report will constitute a key reference document for the Project and will be prepared and shared with participants to clarify and formalize various agreements and plans decided during the meeting.
Annually:

Annual Project Review/Project Implementation Report (APR/PIR): This key report is prepared to monitor progress made since project start and in particular for the previous reporting period (1 July to 30 June). The APR/PIR combines both UN Environment and GEF reporting requirements.

The APR/PIR includes, but is not limited to, reporting on the following:

- Progress made toward project objective and project outcomes - each with indicators, baseline data and end-of-project targets (cumulative);
- Project outputs delivered per project outcome (annual);
- Lesson learned/good practice;
- Annual Work Programme (AWP) and other expenditure reports;
- Risk and adaptive management; and
- GEF International Waters Tracking Tool indicators.

Mid-term of project cycle:

In-line with UN Environment Evaluation Policy and the GEF’s Monitoring and Evaluation Policy the project will be subject to a Terminal Evaluation and, additionally, a Mid-Term Review will be commissioned and launched by the Project Manager before the project reaches its mid-point. Based on the conclusion of the Mid-Term Review, the Evaluation Office will determine, whether an independent Mid Term Evaluation (MTE) is required at the mid-point of project implementation. If the decision is to proceed with an independent Mid-Term Evaluation, this will assess the progress made toward the achievement of outcomes and will identify course correction if needed. It will focus on the effectiveness, efficiency and timeliness of project implementation; it will highlight issues requiring decisions and actions, and will present initial lessons learned about project design, implementation and management. Findings of this review will be incorporated as recommendations for enhanced implementation during the final half of the project’s term. The organization, terms of reference and timing of the Mid-Term Evaluation will be decided after consultation between the parties. The Terms of Reference for this Mid-Term Evaluation will be prepared by UN Environment.

Information in the GEF International Waters Tracking Tool will also be updated during the mid-term evaluation cycle.

End of Project:

The Evaluation Office will be responsible for the Terminal Evaluation (TE) and will liaise with the Task Manager and Executing Agency(ies) throughout the process. The TE will provide an independent assessment of project performance (in terms of relevance, effectiveness and efficiency), and determine the likelihood of impact and sustainability. It will have two primary purposes: (i) to provide evidence of results to meet accountability requirements, and (ii) to promote learning, feedback, and knowledge sharing through results and lessons learned among UN Environment, the GEF, executing partners and other stakeholders. The direct costs of the evaluation will be charged against the project evaluation budget. The Terminal Evaluation will be initiated no earlier than six months prior to the operational completion of project activities and, if a follow-on phase of the project is envisaged, should be completed prior to the submission of the follow-on proposal. Terminal Evaluations must be initiated no later than six months after operational completion.

The draft TE report will be sent by the Evaluation Office to project stakeholders for comment. Formal comments on the report will be shared by the Evaluation Office in an open and transparent manner. The project performance will be assessed against standard evaluation criteria using a six point rating scheme. The final determination of project ratings will be made by the Evaluation Office when the report is finalized and further reviewed by the GEF Independent Evaluation Office upon submission. The evaluation report will be publicly disclosed and may be followed by a recommendation compliance process.
PART III: CERTIFICATION BY GEF PARTNER AGENCY(IES)

A. GEF Agency(ies) certification

This request has been prepared in accordance with GEF policies\(^\text{37}\) and procedures and meets the GEF criteria for CEO endorsement under GEF-6.

ANNEX B: GEF SECRETARIAT REVIEW SHEET

No specific comments and the activities, outputs and outcome of Child Project 4.1 were made by the STAP or the council at PFD stage. For ease reference the following table reports the comments made by the STAP on the activities, outputs and outcomes of the entire MedProgramme and the feedback provided by the Programme.

Comments of STAP and Council at PFD stage and answers provided by the MedProgramme.

<table>
<thead>
<tr>
<th>Comment received</th>
<th>Response at CEO Endorsement</th>

</thead>
<tbody>
<tr>
<td><strong>PFD Review Sheet</strong></td>
<td></td>
</tr>
<tr>
<td>The majority of comments received in the Review Sheet for the PFD were all addressed at that time and were recorded as ‘Addressed’ in the Review Sheet. Some comments that remained are summarized below:</td>
<td></td>
</tr>
<tr>
<td>Please change the submission in the country section, where it is noted to be a GLOBAL project. The project is regional, with participating countries having included endorsement letters.</td>
<td>Done in the portal submission.</td>
</tr>
<tr>
<td>In regard to chemicals and waste, please provide a description of the baseline projects in relation to PCBs and POPs chemicals</td>
<td>Please refer to the National Baseline tables and Baseline sections in the CEO Endorsement Request</td>
</tr>
<tr>
<td>A detailed M&amp;E plan should be presented at the time of CEO endorsement.</td>
<td>Please refer to Section C of the CEO Endorsement Request and budget.</td>
</tr>
<tr>
<td><strong>STAP Review</strong></td>
<td></td>
</tr>
<tr>
<td>The need for the proposed Programme is understood by STAP to be a demand for a coordinating mechanism for the implementation of actions identified through the MedPartnership project.</td>
<td>The actions that will be addressed in the MedProgramme were defined by the Countries after a long and complex participatory TDA-SAP process leading to the National Action Plans where all the major stakeholders at national level were involved along with the major decision makers and political institutions. The MedPartnership was instrumental in supporting the final phase of this process in order to ensure that the NAPs were developed by the countries in a coordinated and efficient sound manner.</td>
</tr>
<tr>
<td>The updating of the TDA proposed in Child Project 1.1 should not be permitted to distract from the implementation of the two agreed SAPs and various NAPs.</td>
<td>It will not, activities which address the SAPs and NAPs will be mainly implemented under CP1.2, 1.3, 2.1, 2.2 and 3.1. The CP 1.1 will work on POP and Hg, moreover it will ensure to put in place all the diagnostic tools that can help us to measure the progress to impact; being the updated TDA one of those.</td>
</tr>
<tr>
<td>It is not clear from the PFD that the child projects proposed have been designed in a participatory manner with national and local stakeholders, particularly with civil society representatives and community groups. The PFD still reads as largely a top-down document and proponents need to address this deficit, regarding roles, responsibilities and accountabilities of stakeholders especially at sub-national level.</td>
<td>As stated in the STAP “the Programme followed the successful implementation of the MedPartnership”. The MedProgramme has been developed by request of the countries and with an approach that considers all the major stakeholders who will be instrumental to the implementation of the proposed activities. For example, for the investment component, both EIB and EBRD, will use the NAPs which has been endorsed at national level with a bottom-up approach involving a wide number of stakeholders at national and local level. The same applies to the conjunctive surface and groundwater management which will be implemented in those countries that recognized its importance through processes which involved (under the MedPartnership) the main stakeholders.</td>
</tr>
<tr>
<td>It is not clear from the PFD that the child projects proposed have been designed in a participatory manner with national and local stakeholders, particularly with civil society representatives and community groups. The PFD still reads as largely a top-down document and proponents need to address this deficit, regarding roles, responsibilities and accountabilities of stakeholders especially</td>
<td>As stated in the STAP “the Programme followed the successful implementation of the MedPartnership”. The MedProgramme has been developed by request of the countries and with an approach that considers all the major stakeholders who will be instrumental to the implementation of the proposed activities. For example, for</td>
</tr>
<tr>
<td><strong>at sub-national level.</strong></td>
<td>the investment component, both EIB and EBRD, will use the NAPs which has been endorsed at national level with a bottom-up approach involving a wide number of stakeholders at national and local level. The same applies to the conjunctive surface and groundwater management which will be implemented in those countries that recognized its importance through processes which involved (under the MedPartnership) the main stakeholders.</td>
</tr>
<tr>
<td><strong>Therefore, the entire Programme design should provide for sufficient flexibility and appropriate adaptive management strategies to counteract political instability and continuously changing circumstances of the countries in the Mediterranean region</strong></td>
<td>The adaptive management strategy at the MedProgramme level relies on one major tool, the Annual Stocktaking Meetings, part of CP 4.1 (output 2.2). Through these major meetings all issues of concern related to changes in political will or instability in the recipient countries will become manifest and allow for timely adaptive management responses at both the Child Project and at the Program levels.</td>
</tr>
<tr>
<td><strong>During the further preparation of the Programme and its individual projects, STAP strongly recommends using a common analytical approach using scenarios to explore possible futures and identify specific intervention points for most impactful programme/project interventions.</strong></td>
<td>Done. In the selection of the many hot spots addressed by MedProgramme, a homogeneous approach has been adopted including future scenarios, whenever necessary.</td>
</tr>
<tr>
<td><strong>Ecosystem-based adaptation solutions could be explored.</strong></td>
<td>Done. Nature based solutions, and circular economy approaches inform a number of CPs, in Particular CP 1.2 and 2.1.</td>
</tr>
<tr>
<td><strong>Recognizing the current regional security context, STAP recommends developing further cooperative and transboundary infrastructure to protect human security of refugees and migrants by e.g., supporting livelihoods diversification among human traffickers.</strong></td>
<td>The implementing and executing partners of the MedProgramme fully recognize such much needed actions, however based on discussion with the GEF Secretariat during the development phase such kind of actions do not seem to be under GEF mandate. Nevertheless, we believe that by increasing environmental security, the MedProgramme will indirectly strive improve the conditions of migrants, and regional stability.</td>
</tr>
<tr>
<td><strong>Many of the Programme interventions are best described in the framework of the Source to Sea concept. Programme proponents are advised to consult the recently released Source to Sea conceptual framework to consolidate and design further often loosely connected activities of the Programme (available at: <a href="http://www.thegef.org/council-meeting-documents/conceptual-framework-governing-and-managing-key-flows-source-sea-continuum">http://www.thegef.org/council-meeting-documents/conceptual-framework-governing-and-managing-key-flows-source-sea-continuum</a>).</strong></td>
<td>The source to sea conceptual framework, coupled with the GPA guidelines, has clearly inspired the MedProgramme design, which builds on the 40 years’ experience, data, information and country ownership produced by the Barcelona Convention.</td>
</tr>
<tr>
<td><strong>A priority not dealt with in Component 4 is provision of support to participating countries to incentivize application of IMAP to policy reform or implementation.</strong></td>
<td>The IMAP has been endorsed by the Contracting Parties to the BC in February 2016. All the countries made provision for its implementation at national level. The intention of the MedProgramme is to support and coordinate part of this process at regional level. This will happen especially under CP1.1. Moreover, CP4.1 will implement a KM Strategy which on top of bring benefit to the Programme is also helping the countries to manage the data and information produced by the child project and transfer them, as needed, to the Barcelona Convention IMAP process.</td>
</tr>
<tr>
<td><strong>The PFD does not provide substantive evidence of ownership (the word is missing from the entire document), beyond the formal country endorsements, and as is the case with regional projects in general, an emphasis on the demand side needs to be more fully demonstrated, especially for the proposed child projects.</strong></td>
<td>On the contrary, the Programme builds on over 20 years of GEF IW involvement in supporting the TDA-SAP-NAPs process, and on the actions of the Barcelona Convention and of its Regional Activities Centres. This has ensured a level of country ownership rarely achieved in previous efforts globally.</td>
</tr>
<tr>
<td><strong>There should also be consideration of potential non industrial sources of POPs and other toxic chemicals and seeking out of the</strong></td>
<td>The Chemicals and Waste component addresses non-industrial use of PFOS by firefighting services, in line with</td>
</tr>
<tr>
<td>Cell</td>
<td>Text</td>
</tr>
<tr>
<td>---------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>potential role of Integrated Pest Management (IPM) techniques to</td>
<td>minimize use of pesticides in agriculture, horticulture, general pest control, vector control, structural preservation treatments and others.</td>
</tr>
<tr>
<td>the priorities expressed by countries in their NIPs. Country NIPs</td>
<td>do not prioritize</td>
</tr>
<tr>
<td>Where there are data gaps as relates to chemicals pollution, there</td>
<td>should be careful retention of such data in the course of implementing this project, as well as key lessons learned in the course of implementation of methods to curtail chemicals pollution from various sources, including the impacts of climate change and variability on the concentration and behavior of harmful chemicals.</td>
</tr>
<tr>
<td>The Child Project 1.1 includes data compilation using a GIS platform</td>
<td>on waste inventories and for tracking of disposal progress. It also proposes collection of data on gender aspects of exposure to these waste sites. Finally, it will produce lessons learnt on prevention of new POPs and mercury.</td>
</tr>
<tr>
<td>Through the links with Child Project 4.1 these knowledge products</td>
<td>will be retained systematically in the wider KM systems and made available for stakeholders.</td>
</tr>
<tr>
<td>GEF Council</td>
<td></td>
</tr>
<tr>
<td>Germany on OUTCOME 1: Reduction of land-based pollution in priority</td>
<td>coastal hotspots and measuring progress to impacts. Germany suggests expanding the suggested focus on chemicals pollution (in particular POPs, PAHs, and mercury) to include also non-industrial sources of POPs of high relevance. Furthermore, a more detailed analysis for each country (how effective support and coordination will be reached) is recommended for better monitoring and evaluation purposes.</td>
</tr>
<tr>
<td>The reduction of land Bases Sources of pollution (LBS) and</td>
<td>measuring of progress to impact in the Mediterranean Sea is based on a 15 years cycle stated with the Transboundary Diagnostic Analysis, followed by the preparation and endorsement by the countries of the Strategic Action Plan (SAP) for LBS (SAP-MED) and for Biodiversity (SAP-BIO). The implementation of the two SAPs led to the definition of national Action Plans were the hotspots of intervention in terms of LBS are clearly indicated and agreed upon by the countries. Unfortunately, this process did not include the tracking, monitoring and identification for POPs, PAHs and Mercury. Nevertheless, the Child Project 1.1 (GEF ID 9684) of the MedProgramme addresses non-industrial use of PFOS by firefighting services, in line with the priorities expressed by countries in their NIPs. Country NIPs do not prioritize. Moreover, the work done by the Barcelona Convention on defining stocks of POPs and Hg in the Mediterranean countries, together with the further development of this information under the MedProgramme will allow a huge step forward in the region to support the countries in their effort of addressing this issue.</td>
</tr>
<tr>
<td>Germany on OUTCOME 4: Germany welcomes the promotion of an</td>
<td>integrated coastal zone management (ICZM). Participatory management, thus the empowerment of user groups into the management decisions as well as the surveillance and monitoring are crucial for the projects’ success. A stronger emphasis on alternative livelihoods for fishing communities is recommended.</td>
</tr>
<tr>
<td>Child Project 2.1 (GEF 9687) focuses on major coastal wetlands,</td>
<td>lagoons, humid zones and coastal habitats, providing very valuable services and contributing to coastal livelihoods and biodiversity, are all in part or totally dependent on groundwater regimes. This included livelihoods for fishing communities. Moreover, being the MedProgramme executed under the umbrella of the Barcelona Convention, it will benefit of the ongoing partnership between the Convention and the General Fishery Commission of the Mediterranean which will introduce elements related to fishing in the Programme.</td>
</tr>
<tr>
<td>Germany on OUTCOME 7: Germany welcomes the improvement of</td>
<td>management capacity as well as the expansion of the Libyan Marine Protected Areas (MPA). It is recommended to incorporate the high importance of artisanal fisheries for local food security and livelihoods. The MPA management plan should imply buffer zones between the MPA and fishing areas. In these small strips local fishermen communities can use an exclusive access (ban for industrial fisheries) and benefit from extensive fisheries. Involvement of fishermen in the management of marine protected areas is crucial for their sustainability.</td>
</tr>
<tr>
<td>Artisanal fisheries are included in Child Project 3.1 (GEF ID 10158),</td>
<td>concretely in its output 31 where the importance of artisanal fishery is recognized and supported by several activities such as the preparation and dissemination of a set of communication material to promoting artisanal sustainable fishery heritage in and around the selected MPAs.</td>
</tr>
<tr>
<td>Germany on the MedProgramme: Lobbying for a higher political</td>
<td>prioritization of the implementation of national fishery policies and</td>
</tr>
<tr>
<td>Although this activity is not directly included in the MedProgramme</td>
<td>(which mainly addresses the priorities</td>
</tr>
<tr>
<td>(CP 4.1)</td>

<table>
<thead>
<tr>
<th>Frameworks promoting sustainable marine resource management.</th>
<th>Defined by the Mediterranean Countries under the Protocols of the Barcelona Convention, implementation of national fishery policies and frameworks promoting sustainable marine resource management, it is focus of the collaboration partnership between the Convention and the General Fishery Commission of the Mediterranean. Outcomes and outputs of this partnership will be linked to the MedProgramme.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany on the MedProgramme: ‘Blue Carbon’ offsets as an economic potential for coastal villages.</td>
<td>Although we recognize the importance of the comment made by Germany, ‘Blue Carbon’ offsets as an economic potential for coastal villages is not in the scope of the MedProgramme. However, being the Programme executed in the wider framework of the Barcelona Convention process linkages with Blue Carbon offset and related matter will be explored and certainly made if appropriate.</td>
</tr>
<tr>
<td>Germany on the MedProgramme: Decentralized adaption strategies for the intrusion of saline groundwater into aquifers. In sunny areas PV-driven small-scale desalination plants could allow local approaches.</td>
<td>Although we recognize the importance and technical relevance of the comment made by Germany, desalination plan/processes/standards are not eligible under GEF 6 therefore have been removed by the Programme. Nevertheless, under Child project 1.2 (GEF ID 9717), the Barcelona Convention will develop common environmental standards on desalination for the Mediterranean Region by using NON-GEF funds. These standards will be submitted to the Conference of Contracting Parties of the Convention for consideration. If approved they will be the first step to support the approach suggested by Germany.</td>
</tr>
<tr>
<td>Germany on the MedProgramme: The involvement of wastewater reuse and freshwater consumption reduction strategies.</td>
<td>Child Project 1.2 (GEF ID 9717) is promoting investments at national level will focus on WWTP Extension and upgrade including treated wastewater reuse/reinjection (MAR) to decrease water consumption in the countries where national actions will take place (Egypt, Lebanon and Tunisia). Moreover, the same Child Project will develop regional standards on wastewater management (including reuse) for deliberation of the Contracting Parties of the Barcelona Convention.</td>
</tr>
<tr>
<td>Germany on the MedProgramme: More investments into wastewater-treatment facilities for the reduction of heavy metals, endocrine disrupters, plastic and other pollutants as runoff in the Mediterranean Sea.</td>
<td>Under Child Project 1.2 (GEF ID 9717) EIB will mobile more than USD 600M in investments on WWT facilities in Egypt, Lebanon and Tunisia. Moreover, the MedProgramme is already generating interest of other potential investors to engage in advanced WWTP in the region to achieve reduction of LBS of pollution and increase climate change adaptation resilience.</td>

<td>• Researches, analyzes and presents information gathered from Child Project 4.1 • Prepares various written outputs, e.g. draft background papers, analysis, sections of reports and studies, inputs to publications, GEF Experience Notes, summaries for policy makers, etc., related to Child project 4.1. • Assists with the organization of the MedProgramme’s Annual Stocktaking Meetings, helping to ensure that Child project 4.1 is properly contributing and benefitting from the meeting • Provides technical contributions related to Child Project 4.1 for the Steering Committees, including the preparation of background and working documents and drafting of meeting reports, etc. • Undertakes survey initiatives; designs data collection tools; reviews, analyzes and interprets responses, identifies problems/issues and prepares conclusions for Child project 4.1 • Contributes to the development of the outward-facing MedProgramme portal analyses the existing data and surveys and identify the target areas to be visited. • Contributes to the development of databases for the management of raw/primary • Contributes to the establishment of the MedProgramme visual identity • Prepare a record to take stock of successful policies, practices and technologies; evaluation of replication potential; and identification of replication sites</td>
<td>Cross-cutting (all Child Project 4.1 workplan activities)</td>
</tr>
<tr>
<td><strong>Regional consultant Knowledge Management</strong></td>
<td>6,700 / 30</td>
<td>• Refines the KM Strategy developed in the PPG phase by selecting and adopting specific tools and activities needed to achieve the KM objectives set and approved for the MedProgramme and its Child Projects; • Prepares an Action Plan (including timeline and budget) for the duration of the MedProgramme and execute both KM Strategy and Action Plan;</td>
<td>Cross-cutting (all Child Project 4.1 workplan activities)</td>
</tr>
</tbody>
</table>
• Develops and maintain the MedProgramme integrated KM Platform which includes (1) a project management/coordination tool; (2) a public portal including sub-webpages for each Child Project; (3) visualization tool(s) to display digitalized representation of data through GIS and other suitable means; and (4) a database for raw/primary data.

• Facilitate MedProgramme contribution to IW:LEARN activities (including participation to the International Waters Conferences and twinnings, preparation of Experience Notes, among others) and other GEF relevant initiatives and events, particularly related to the focal areas of International Waters, Chemical and Waste, Biodiversity and Climate Change;

• Improve capacity of key regional stakeholders and Child Projects teams through ad hoc knowledge exchanges and training on selected topics (to be decided at the beginning of Programme implementation) and support specific capacity building activities foreseen by each Child Project by taking stock and amplifying results through the programme-wide outreach;

• Lead the communications and outreach components of the KM Strategy, which include: 1) creating a MedProgramme identity to ensure visibility and coherent presentation; 2) preparing and publishing periodic newsletters showcasing stories and data from Child Projects; 3) translating Child Projects findings and policy engagement works into communications products using diverse storytelling techniques and multimedia supports (short movies and animations, infographics, interviews, articles, etc.); 4) developing appropriate content for MedProgramme social media channels; 5) engaging with media and testimonials.

• Prepare Terms of References (TORs), identify and evaluate outsourced experts (i.e. video makers, graphic designers, web developers, data analysts, translators, etc.), and provide quality assurance, following UN Environment rules and regulations;

• Strengthen the Science-Policy Interface (SPI) and positively influence decision-making in the region on NRM in coastal areas through various actions, including the preparation of National Replication Atlases (which encourage broader adoption and replication of the successful policies, practices and technologies implemented under the MedProgramme) and the promotion of relevant scientific reports and scientific peer-reviewed publications prepared by the Child Projects;

• Establish and/or maintain partnerships with relevant actors in the Mediterranean Region;
| Regional consultant Gender Expert | 6,700 / 33 | • Refines the Gender Mainstreaming Strategy developed in the PPG phase by selecting and adopting specific tools and activities needed to achieve the strategy’s objectives set and approved for the MedProgramme and its Child Projects;  
• Analyses the Gender Assessment and Actions Plans developed by each Child Project and choose appropriate mainstreaming actions suited to the results framework  
• Oversees the coordination and implementation of these gender strategies across the portfolio.  
• Reviews the Gender mainstreaming Strategy in accordance with developments of the implementation stage and provide any support required by the Child Projects of the MedProgramme.  
• Further, the Specialist will develop an overall Gender Monitoring Framework, in keeping with GEF specifications  
• Creates performance measurement indicators tailored for gender actions at the output level for each Child Project, comparable throughout the programme.  
• Chartings the overall gender mainstreaming milestones being achieved by each individual Child Project.  
• Contributes to the design of gender balanced trainings, meetings, events and publications for Child Project 4.1.  
• Develop gender assessments and analysis for Child Project 4.1 as relevant. | Cross-cutting (all Child Project 4.1 workplan activities) |
| Justification for travels | | The consultants may be required to travel to the countries and or premises of the executing partners to discuss execution of the activities and programmatic issues related to the implementation of International Waters’ activities, Knowledge Management and Gender mainstreaming Strategies. Moreover, the consultants may be also required to participate and contribute to the MedProgramme Steering Committees, Annual Stocktaking Meetings and other meetings and events as relevant. |

ANNEX H: PROJECT IMPLEMENTATION ARRANGEMENTS

The institutional arrangements as described in the CEO Endorsement Request (section A.6) are further detailed in this annex, which provides information on the roles of the MedPCU and the Executing Partners.

MedProgramme Coordinating Unit (MedPCU):

The detailed list of services to be provided by the MedPCU are as follows:

Child Project 4.1 management services:
- Manage the flow of information from the field and produce periodic monitoring reports, namely quarterly financial expenditure reports; annual expenditure forecasts and procurement plans; half-yearly narrative reports of progress including the annual Project Implementation Review;
- Initiate, validate, sign and implement legal instruments with all bilateral partners including executing partners and countries where appropriate;
- Organize travel and payment of DSA for staff and consultants as needed;
- Coordinate and support the project activities, namely the coordination and monitoring of the activities under the Child Project 4.1 and the execution of the Knowledge Management and Gender Mainstreaming Strategies;
- Organize the meetings of the Project Steering Committee (PSC) and serve as its Secretariat;
- Ensure the Project governance and oversight of the financial resources from the GEF investment and the co-financing delivered by the Project stakeholders.

Programmatic coordination:
- Ensure that the execution of the entire MedProgramme is aligned and integrated with the priorities of the Contracting Parties to the Barcelona Convention, its 2016-2021 Mid-Term Strategy and biennial Programmes of Work;
- Ensure that the execution of the MedProgramme Gender and Knowledge Management Strategies is consistent across the entire Programme.
- Establish a mechanism to monitor and evaluate progress towards the objectives of the MedProgramme as a whole.

MedProgramme Visibility:
- Represent the MedProgramme in global events and initiatives.
• Ensure that the Programme Annual Stocktaking Meeting is organized in a coordinated manner to efficiently serve the countries, IA, EA and stakeholders;
• Share the Project achievements, products/outputs with the Project and MedProgramme’s stakeholders;

Technical support:
• Provide staff time and expertise in guiding and advancing the execution of technical activities under the Project which will be fully executed by the MedPCU;
• Coordinate with administrative and technical staff on drafting and compiling tender documents as needed; advertise tenders where relevant; convene and/or contribute to tender review committees where appropriate;
• Coordinate with administrative and technical staffs on drafting and compiling tender documents as needed; advertise tenders where relevant; convene and/or contribute to tender review committees where appropriate

The proposed staffing arrangements for the MedPCU are provide in figure 1 below.

It is anticipated that the MedPCU will be staffed with the following core positions:
• MedProgramme Coordinator (P4)
• Programme Officer CW (P3)
• Programme Financial Assistant (G5)
• Programme and Administration Assistant (G5)

In addition to this, the MedPCU operations will be supported during specific periods of the lifespan of the Child Project 4.1, by one Gender Specialist, one Knowledge Management Specialist and by a regional expert on International Waters, to be engaged through out-sourced contracts. The MedPCU will be established and hosted by UN Environment/MAP in Athens, Greece, following the successful model of the MedPartnership Project.

To: Ms. Brenan Van Dyke, Executive Coordinator
United Nations Environment Programme
Gigiri, P.O Box 30552 – 00100 Nairobi, Kenya

Subject: Endorsement for Mediterranean Sea Programme (MedProgramme)

In my capacity as GEF Political Focal Point for Bosnia and Herzegovina, I confirm that the above Program proposal is in accordance with my government’s national priorities and our commitment to the relevant global environmental conventions.

I am pleased to endorse the preparation of the above Program proposal which will be led by the United Nations Environment Programme. If approved, the proposal will be prepared and executed through UNEP/MAP, EBRD with co-executing partners (UNIDO, IUCN, UNESCO, EIB and WWF MedPO, etc.).

The MedProgramme follows the successful implementation of the “MedPartnership” and “ClimVar & ICZM” GEF funded projects in Bosnia and Herzegovina. Among other successful activities, the development of a PCB inventory and disposal of PCB in Bosnia and Herzegovina, has been one of the most relevant achievements of the above mentioned projects during the period 2009 and 2015.

The total financing being requested for the child projects under this Program is US$ 47,390,000 inclusive of GEF financing for the child projects, PPG that will finance the preparation of individual child projects under the Program, and Agency fees for project cycle management services associated with the projects under the Program.

Kindly note that by endorsing the MedProgramme Bosnia and Herzegovina is not committing co-financing to the Programme at this stage.

Sincerely,

MINISTER
Mirko Sarović

Copy to: Convention Focal Point for Stockholm (POPs)

Subject: Endorsement for Mediterranean Sea Programme (Med Programme)

In my capacity as GEF Operational Focal Point for Libya, I confirm that the above Program proposal is (a) in accordance with my government’s national priorities and our commitment to the relevant global environmental conventions; and (b) was discussed with relevant stakeholders, including the global environmental convention focal points.

I am pleased to endorse the preparation of the above Program proposal which will be led by the United Nations Environment Programme. If approved, the proposal will be prepared and executed through UNEP/MAP, EBRD with co-executing partners (UNIDO, IUCN, UNESCO, EIB and WWF MedPO, etc.).

The total financing being requested for the child projects under this Program is US$47,390,000, inclusive of GEF financing for the child projects, PPG that will finance the preparation of individual child projects under the Program, and Agency fees for project cycle management services associated with the projects under the Program. The funding breakdown requested for this regional Programme is detailed in the table below including the GEF Agencies that will implement the project(s). The below table also includes US$ 1,500,000 of Biodiversity STAR earmarked by Libya.

ANNEX K1 CO-FINANCING COMMITMENT LETTERS FROM PROJECT PARTNERS CP4.1
Date: 11 October 2018

Subject: Cash and in-kind contributions to the GEF ID 9686 project "Mediterranean Sea Basin Environment and Climate Regional Support Project" – Child Project 4.1 of the MedProgramme.

In my capacity as Coordinator of the Barcelona Convention Secretariat, Coordinating Unit for the Mediterranean Action Plan (UN Environment/MAP), I wish to confirm that UN Environment/MAP will coordinate the execution of the child project of the MedProgramme "Mediterranean Sea Basin Environment and Climate Regional Support Project" which will contribute to the implementation of mechanisms for program-wide learning and sharing of knowledge, monitoring progress to impact, and fostering synergistic interactions among child projects and across the MedProgramme.

I am hereby pleased to confirm that UN Environment/MAP will support the project with a cash contribution of 600,000 USD and an in-kind contribution of 233,578 USD which will be allocated over the 60 months of the project duration starting from its approval by the GEF Secretariat. The cash and in-kind contributions will be allocated as follows:

- 600,000 USD: cash contribution to support the staff of the MedProgramme Coordinating Unit (MedPCU) for the execution of the activities under the Child Project 4.1 and to give support across all the child projects of the MedProgramme. This cash contribution will be provided from the Mediterranean Trust Fund or other funds supporting the Mediterranean Action Plan. This commitment is subject to the approval of the 21st Ordinary Meeting of the Contracting Parties to the Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean and its Protocols which will be held in Naples, Italy in December 2019. For this reason, the cash contribution will be confirmed officially at the Project Steering Committee which will take place in 2020.
- 233,578 USD: Staff time in support of the project (Management of the Barcelona Convention Secretariat Coordinating Unit for the Mediterranean Action Plan, Administrative/Fund Management Officer, and Administrative Staff);
- 5,000 USD: In-kind contribution for sundry and communication costs.

Yours sincerely,

Gaetano Leone

ANNEX K2 CO-FINANCING COMMITMENT LETTERS FROM COUNTRIES CP4.1
Subject: Co-financing contribution from Algeria for Child Projects 2.1 and 4.1 of the MedProgramme.

Dear Ms. Ishii,

The Ministry of Environment and New Energy, looks forward to the forthcoming collaboration between Algeria and the GEF in the context of the “Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security” (GEF ID 9607). We are committed to joining forces with the GEF to reduce environmental stress on the Mediterranean Sea through the diverse activities foreseen in the multi-local area MedProgramme, including those that will be undertaken in Algeria in support of Child Projects 2.1 and 4.1. In keeping with the GEF’s policy on co-financing, Algeria has identified a number of national initiatives that will support the implementation of these Child Projects and that will contribute to the achievement of their objectives.

Child Project 2.1 is devoted to increasing climate resilience and water security in coastal zones while also promoting the protection of coastal habitats. The activities foreseen in Algeria in this framework include a national assessment and stakeholder consultation to support ratification of the Protocol for Integrated Coastal Zone Management. These activities will build upon and benefit from an important set of national initiatives that Algeria is currently financing to promote the sustainable management of coastal zones, to identify climate change adaptation strategies in the coastal zone, and to protect sensitive coastal habitats, amongst others. These initiatives include the following:

- Update of the National Strategy for Integrated Coastal Zone Management;
- Planning studies for the preparation of local coastal plans for several wilayas (Bejaia, Chlef, Ain Témouchent, Tipasa, El Tarf, Oran, ...);
- Assessments of the vulnerability of coastal zones to environmental risks in two wilayas (El Tarf and Alger);
- Preparation of climate change adaptations plans for three wilayas (Nord, HautsPlateaux and Sud);
- Studies on the protection and management of coastal areas in several wilayas (Alger, El Marsa, Mostaganem).

The value of all related complementary initiatives is estimated at USD 4,551,270, which represents the in-kind co-financing contribution of Algeria to Child Project 2.1.

The government of Algeria also recognizes that awareness raising and effective communication are key to the success of all Child Projects and the MedProgramme as a whole. For this reason, it also pledges its support for the Child Project 4.1 and its Programme-wide strategies for knowledge management and communication. Algeria is currently preparing a rich set of pedagogical tools and awareness raising campaigns to promote the protection of the coastal areas. These activities will contribute to raising awareness about the issues of concern affecting the Mediterranean Sea, and in many cases could be used to promote the knowledge tools and the results of all Child Projects of the MedProgramme. The value of these complementary activities is estimated at USD 2,160,542 USD, which represents the in-kind co-financing contribution of Algeria to Child Project 4.1.

We look forward to working together with the GEF on these important new activities in the Mediterranean.

Yours sincerely,

Samira HAMIDI

GEF FOCAL POINT
Subject: Co-finance contribution from Egypt to Child Projects 1.2, 2.1 and 4.1 of the Med Programme

Dear Ms. Ishii,

Within the framework of the mutual and fruitful cooperation between the Global Environmental Facility (GEF), UN Environment MAP and the Egyptian Environmental Affairs Agency (EEAA), I would like to seize this opportunity to convey my appreciation for your continuous cooperation and support to EEAA through the forthcoming Mediterranean Sea Programme (Med Programme): Enhancing Environmental Security.

I would like to inform you that EEAA is committed to joining forces with the GEF to reduce environmental stress on the Mediterranean Sea through the multi-local area Med Programme, through activities that will be undertaken in Egypt in support of Child Projects 1.2, 2.1 & 4.1. In line with the GEF's co-financing policy, EEAA has identified a number of national programs and initiatives to support the achievement of the goals and objectives of these Child Projects.

On the other hand, we are in process of preparing the co-finance letter for the remaining child projects.

Co-financing for Child Project 1.2

EEAA will support the implementation of Child Project 1.2 and its objectives to reduce land-based pollution in priority coastal hotspots and to measure progress to impacts, through planning and development of institutional capacity and monitoring, pollution reduction, environmental inspection, awareness raising. In addition to, implementation of sustainable development policies, capacity building and dedicated staff time and institutional support, as appropriate, for the execution and monitoring of the project activities.

The estimated in-kind contribution, related to the national programmes, staff time and institutional support is USD 4,187,000.

Co-financing for Child Project 2.1

Child Project 2.1 is fully consistent with and supportive to the implementation of the national policy framework of the Barcelona Convention, with regard to the Strategic Action Programmes to enhance climate resilience and water security in coastal zones, in addition to promoting activities for the protection of coastal habitats, regional plans on management of coastal aquifers and related ecosystems, Programme-wide communication and knowledge management.
These activities will build upon and benefit from several national programmes undertaken by the Egyptian government, including establishment of a National Integrated Coastal Zone Management (ICZM) multipurpose monitoring network for groundwater, seawater and other climate parameters with relevant measurable indicators, as well as engagement of all relevant stakeholders in the implementation of a National ICZM Strategy and national plans in Egypt. In addition to enhancing the ICZM awareness, issues affecting coastal communities and the environment.

The estimated in-kind contribution, related to the national programmes, staff time and institutional support is USD 4,064,000.

Co-financing for Child Project 4.1

EEAA recognizes that awareness raising and effective communication are key to the success of all Child Projects and the MedProgramme as a whole. For this reason, EEAA also pledges staff time and institutional support for the Child Project 4.1 and its Programme-wide strategies for knowledge management and communication.

The estimated in-kind contribution, related to the national programmes, staff time and institutional support is USD 2,000,000.

We look to working with GEF for the good of the Mediterranean Sea and the achievement of our shared global environmental goals.

Yours sincerely,

Mohamed Shehab Abdelwahab

GEF Operational Focal Point
Chief Executive Officer
Dear Mr. Leone,

Subject: Lebanon's co-financing contributions for “MedProgramme Child project components 1.2, 2.1 and 4.1”

The Ministry of Environment reiterates its full endorsement to the MedProgramme Child project and mainly components 1.2, 2.1 and 4.1, which are still under preparation by UNEF, in full coordination with the Ministry of Environment and national stakeholders, and to be financed by GEF.

Within this context, we are sending you copies of Annex 1 (three table templates) related to the co-financing of the MedProgramme Child Projects 1.2, 2.1 and 4.1 for your kind consideration.

Looking forward to the approval and successful implementation of MedProgramme Child Project.

Sincerely Yours,

Tarek Al Khatib

Ms. Naoko Ishii  
Chief Executive Officer and Chairperson  
Global Environment Facility (GEF) 

Subject: Co-financing contribution from Libya for Child Projects 2.1 and 4.1 of the MedProgramme 

Dear Ms. Ishii, 

The Ministry of Water Resources and the Environmental General Authority look forward to the forthcoming collaboration among Libya, the GEF and UN Environment/MAP in the context of the “Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security” (GEF ID 9607). We are committed to joining forces with the GEF to reduce environmental stress on the Mediterranean Sea through the diverse activities foreseen in the multi-focal area MedProgramme, including those that will be undertaken in Libya in support of Child Projects 2.1 and 4.1. In keeping with the GEF’s policy on co-financing, Libya has identified a number of national initiatives that will support the execution of these Child Projects and that will contribute to the achievement of their objectives.

Co-financing for Child Project 2.1 

Child Project 2.1 is devoted to increasing climate resilience and water security in coastal zones while also promoting the protection of coastal habitats. The activities foreseen in Libya in this framework include a national assessment of submarine groundwater discharges. Experts from Libya will also participate in the regional activities of this Child Project, including capacity building workshops on integrated coastal zone management and on the conjunctive management of groundwater and surface water. These activities will build upon and benefit from an important set of related national initiatives in Libya, including the following:

- Update of the National Strategy for Integrated Coastal Zone Management
- Planning studies for the preparation of local coastal plans
- Assessments of the vulnerability of coastal zones to environmental risks
- Preparation of climate change adaptations plans
- Studies on the protection and management of coastal areas

The value of all related complementary initiatives is estimated at USD 600,000, which represents the in-kind co-financing contribution of Libya to Child Project 2.1.
Co-financing for Child Project 4.1

The government of Libya also recognizes that awareness raising and effective communication are key to the success of all Child Projects and the Med Programme as a whole. For this reason, it also pledges its support for the Child Project 4.1 and its Programme-wide strategies for knowledge management and communication. The Ministry of Water Resources and the Environmental General Authority will seek opportunities to promote the results of the Med Programme through their networks and to raise awareness about the issues of concern affecting the Mediterranean Sea. The corresponding value of these efforts is estimated at USD 500,000 USD, which represents the in-kind co-financing contribution of Libya to Child Project 4.1.

We look forward to working together with the GEF on these important new activities in the Mediterranean.

Yours sincerely,

GEF Operational Focal Point for Libya
To Madame Naoko Ishii
CEO & Chairperson of Global Environment Facility

Subject: Co-financing commitment from the Kingdom of Morocco for Child Projects 2.1 and 4.1 of the Mediterranean Sea Programme: Enhancing Environmental Security* (GEF ID 9607)

Dear Ms Ishii,

The State Secretary in charge of Sustainable Development looks forward to the forthcoming collaboration between the Kingdom of Morocco and the GEF in the context of the "Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security". We are committed to working with the GEF to reduce environmental stress on the Mediterranean Sea through the diverse activities foreseen in the multi-focal area MedProgramme, including those that will be undertaken in Morocco in support of Child Projects 2.1 and 4.1.

In this regards, Morocco has identified a number of national initiatives that will support the implementation of these Child Projects and that will contribute to the achievement of their objectives.

Child Project 2.1 is devoted to increasing climate resilience and water security while also promoting the protection of coastal habitats. The activities foreseen in Morocco in this framework include the development of an Integrated coastal zone management plan for the region of Tanger-Tétouan-Al Hoceima and a comprehensive set of actions to promote the sustainable management of the Rhiss Nekkor coastal aquifer, amongst others.

These activities will build upon and benefit from the robust portfolio of initiatives that the Kingdom of Morocco is currently financing to reduce pollution and to promote the sustainable development of the coastal zone. Including through improved wastewater collection and treatment, better solid waste management, strategic coastal planning, and the monitoring of bathing waters. These initiatives include the following: The National Program of Liquid Sanitation, the National Household Waste Program, the Master Plan to Promote the Maritime Public Domain, the National Coastal Plan, The Monitoring Program for Bathing Waters.

The value of these initiatives is estimated at USD 176,909,600, which represents the in-kind co-financing contribution of the Kingdom of Morocco to Child Project 2.1.

The Kingdom of Morocco also recognizes that knowledge sharing, effective communication and awareness raising are key to the success of all Child Projects and the MedProgramme as a whole. For this reason, it also pledges its support for the Child Project 4.1 and its Programme-wide strategies for knowledge management and communication.

Morocco will seek opportunities to share information and data related to its coastal environment, to promote the results of the MedProgramme through its communication networks and to raise awareness about the issues of concern affecting the Mediterranean Sea. The value of these complementary activities is estimated at USD 500,000, which represents the in-kind co-financing contribution of Morocco to Child Project 4.1.

We look forward to working together with the GEF on these important new activities in the Mediterranean.

Yours sincerely,

The GEF Operational Focal Point

[Signature]

Directeur du Patrimoine, de l’Communication et de la Coopération

Rachid PIRAD
Reference number: 114-477/7
Podgorica, 27 July 2018

Ms. Naoko Ishii
Chief Executive Officer and Chairperson
Global Environment Facility (GEF)

Subject: Co-financing commitment from Montenegro for Child Project 2.1: “Mediterranean coastal zones: water security, climate resilience and habitat protection” and Child Project 4.1 “Mediterranean Sea Basin environment and climate regional support project” of the Med Programme

Dear Ms Ishii,

The Ministry of Sustainable Development and Tourism (MSDT) is responsible for coordinating Montenegro’s strategic actions related to environmental policy, climate change, integrated coastal zone management and sustainable development in general. The MSDT has benefited from the technical and financial assistance of the GEF in all of these domains and looks forward to our forthcoming collaboration with the GEF in the context of the “Mediterranean Sea Programme (Med Programme): Enhancing Environmental Security” (GEF ID 9607). We are committed to joining forces with the GEF to reduce environmental stress on the Mediterranean Sea through the diverse activities foreseen in the multi-focal area Med Programme, including those that will be undertaken in Montenegro in support of Child Projects 2.1 and 4.1. In keeping with the GEF’s policy on co-financing, the government of Montenegro has identified a number of national initiatives that will support the implementation of these Child Projects and that will contribute to the achievement of their objectives.

Co-financing for Child Project 2.1

Child Project 2.1 is devoted to increasing climate resilience and water security in coastal zones while also promoting the protection of coastal habitats. The activities foreseen in Montenegro in this framework include the development of an integrated coastal zone management plan (ICZM Plan) in synergy with the SCCF project “Enhancing regional climate change adaptation in the Mediterranean Marine and Coastal Areas” (GEF ID 9670), where climate change adaptation will be mainstreamed into local coastal planning processes for the Boka Kotorska Bay area. Support will be also provided for the Management of Coastal Aquifers and Related Ecosystems through the preparation of the Plan for the Buna - Bojana Transboundary Coastal Aquifer and National Assessment of Submarine Groundwater Discharges, in line with the Integrated Resources Management Plan (IRMP) for the Buna/Bojena area. These activities will build upon
upon and benefit from several national initiatives undertaken by the government of Montenegro. These include activities related to the treatment and disposal of wastewater for the coastal area of Boka Kotorska Bay and municipality of Ulcinj, infrastructural works on regulation of the Bojana river, and projects that are laying the foundations for implementation of all water-related directives of the EU, for example through provision of an operational and efficient monitoring network for surface water and groundwater and the preparation of River Basin Management Plans for the Adriatic and Danube Basins. In addition, the government of Montenegro will pledge staff time and institutional support to ensure the successful execution of the activities of this Child Project that will be carried out in Montenegro.

The value of all related complementary initiatives, staff time and institutional support is estimated at USD 6,100,000, which represents the in-kind co-financing contribution of Montenegro to Child Project 2.1.

**Co-financing for Child Project 4.1**

The government of Montenegro also recognizes that knowledge sharing and management, awareness raising and effective communication are key to the success of all Child Projects and the MedProgramme as a whole. The Ministry of Sustainable Development and Tourism will seek opportunities to share information and data related to its coastal environment, to promote the results of the MedProgramme through its communication networks and to raise awareness about the issues of concern affecting the Mediterranean Sea. For this reason, the government of Montenegro also pledges staff time and institutional support for the Child Project 4.1. The value of the corresponding staff time and institutional support is estimated at USD 300,000 which represents the in-kind co-financing contribution of Montenegro to Child Project 4.1.

We look forward to continuing our fruitful collaboration with the GEF.

Yours sincerely,

Igor Gradjevic

GEF Operational Focal Point
Ms. Naoko Ishii  
Chief Executive Officer and Chairperson  
Global Environment Facility (GEF)

Subject: Co-financing contribution from Tunisia for Child Projects 1.2, 2.1 and 4.1 of the Med Programme.

Dear Ms. Ishii,

The Ministry of Local Affairs and Environment looks forward to Tunisia’s forthcoming collaboration with the GEF in the context of the “Mediterranean Sea Programme (Med Programme): Enhancing Environmental Security” (GEF ID 9607). The government of Tunisia is committed to joining forces with the GEF to reduce environmental stress on the Mediterranean Sea through the diverse activities foreseen in the multi-focal area Med Programme, including those that will be undertaken in Tunisia in support of Child Projects 1.2, 2.1 and 4.1. In keeping with the GEF’s policy on co-financing, the government of Tunisia has identified a number of national initiatives that will support the implementation of these Child Projects and that will contribute to the achievement of their objectives.

Co-financing for Child Project 1.2

Child Project 1.2 will mobilise major innovative investments to support countries in efforts to reduce land-based sources (LBS) of pollution through implementation of their National Action Plans (NAPs), developed in accordance with the LBS Protocol of the Barcelona Convention and the corresponding Strategic Action Programmes (SAP-MED). In Tunisia, these investments will enable the rehabilitation of wastewater treatment facilities, the depollution of land areas, and the reduction of mercury releases. The government of Tunisia is carrying out several projects that will reinforce these activities, including through the preparation of a national chemicals database, the development of a monitoring network of contaminated sites, and the elimination of PCB-containing equipment, amongst other actions. Furthermore, the government of Tunisia will dedicate staff time as well as institutional support for this Child Project.

The value of all related complementary initiatives, staff time and institutional support is estimated at USD 1,684,400, which represents the in-kind co-financing contribution (1,228,000 USD for related initiatives and 456,400 USD for staff time and institutional support) of the government of Tunisia to Child Project 1.2.
Co-financing for Child Project 2.1

Child Project 2.1 is devoted to increasing climate resilience and water security in coastal zones while also promoting the protection of coastal habitats. The activities foreseen in Tunisia in this framework include a national assessment and stakeholder consultation to support ratification of the Protocol for Integrated Coastal Zone Management, and a comprehensive set of actions to enhance the management of the Ras Jebel coastal aquifer and its related ecosystems. These activities will build upon and benefit from several national initiatives undertaken by the government of Tunisia, including collaborations on integrated water resources management at the local level, and the National Strategy on the Green Economy. In addition, the government of Tunisia will pledge staff time and institutional support to ensure the successful execution of this Child Project.

The value of all related complementary initiatives, staff time and institutional support is estimated at USD 38,622,000, which represents the in-kind co-financing contribution (38,530,000 USD for related initiatives and 92,000 USD for staff time and institutional support) of Tunisia to Child Project 2.1.

Co-financing for Child Project 4.1

The government of Tunisia also recognizes that awareness raising and effective communication are key to the success of all Child Projects and the MedProgramme as a whole. For this reason, the government of Tunisia also pledges staff time and institutional support for the Child Project 4.1 and its Programme-wide strategies for knowledge management and communication. The value of the corresponding staff time and institutional support is estimated at USD 164,000, which represents the in-kind co-financing contribution of Tunisia to Child Project 4.1.

We look forward to working together with the GEF on these important new activities in the Mediterranean.

Yours sincerely,

Ministre des Affaires Locales et de l'Environnement

Riadh MOUAKHAR
## Annex 1
Details on co-financing for the MedProgramme

### A. Child Project 1.2 “Mediterranean pollution hot spots investment project”

#### Grant co-financing

1. Grant (cash) co-financing.

*Note: The provision of grant (cash) co-financing is welcome but is not required for the submission of the Child Projects to the GEF for approval.*

### Annex O: List of Project Stakeholders

<table>
<thead>
<tr>
<th>Typology</th>
<th>Stakeholder</th>
<th>Role/ responsibility in project execution</th>
</tr>
</thead>
</table>
| Project partners (Child Projects of the MedProgramme) | **Child Project 1.1**  
  - UN Environment Chemicals and Health Branch (Geneva)  
  - MED POL (Programme for the Assessment and Control of Marine Pollution in the Mediterranean)  
  - Regional Activity Centre for Sustainable Consumption and Production (SCP/RAC)  
  - Plan Bleu  
  - UN Environment/MAP | Child projects are both the beneficiaries and main actors of the Knowledge Management and gender mainstreaming Strategy that will be implemented by CP 4.1.  
During the design phase, the stakeholders under each Child Project contributed to the definition of the 2 strategies by proving inputs to define the needs in terms of KM and Gender mainstreaming. For the latter, these contributions were used to develop specific gender action plans for each Child project.  
During the execution of the Child Project 4.1 and the MedProgramme, the stakeholders under each Child Project by executing their specific activities will produce knowledge which will be collected, analyzed and processed by the KM strategy of Child Project 4.1. This will result into an increase uptake of the lessons learned by each specific stakeholder which will share this knowledge with the other child projects and their actors.  
Moreover Child Project 4.1 will also provide support and guidance the stakeholders under each Child Project for the execution of the specific gender action plans. This will be also monitored by Child Project 4.1 to assess the progress made by each Child Project. |
|                                      | **Child Project 1.2**

  - UN Environment/MAP |                                                                                                           |
|                                      | **Child Project 2.2** |                                                                                                           |
### Child Project 3.1
- Regional Activity Centre for Specially Protected Areas (SPA/RAC)
- WWF Mediterranean Programme Office (WWF MedPO)
- International Union for Conservation of Nature
- UN Environment/MAP

During the design phase, the CPs contributed to the definition of the 2 strategies by proving inputs to define the needs in terms of KM and Gender mainstreaming.

During the execution of the Child Project 4.1 and the MedProgramme, the CPs will act as child project 4.1 ambassadors disseminating MedProgramme’s achievements in their countries increasing the impact of the Programme.

### Contracting Parties (CPs) of the Barcelona Convention participating in the MedProgramme
- Albania (Ministry of Tourism and Environment)
- Algeria (Ministry of Environment and Renewable Energy)
- Bosnia and Herzegovina (Ministry of Foreign Trade and Economic Relations)
- Egypt (Egyptian Environmental Affairs Agency)
- Lebanon (Ministry of Environment)
- Libya (Environment General Authority)
- Montenegro (Ministry of Sustainable Development and Tourism)
- Morocco (Secretariat of State in Charge of Sustainable Development)
- Tunisia (Ministry of Local Affairs and Environment)

### National stakeholders in the participating countries
- Public Sector: ministries responsible for water resources; environment; spatial and development planning; transport; tourism; fisheries; industry; maritime affairs; health; firefighting; community development; education; culture and local government authorities.
- Private Sector: national and regional organizations representing: farmers; fisher folk; manufacturers/industrialists; tourism and aquaculture sector; banks; insurances.
- Non-governmental Organizations (NGOs): national trusts; conservation associations; women’s organizations;

Based on each country’s stakeholder analysis developed by each Child Project, the Child Project 4.1 will ensure that key national stakeholders will be exposed to the experiences gained through other Child Projects, and actively share the lessons learnt that may have Mediterranean-wide implications.
community-based organizations (CBOs).

- Scientific community: researchers; sociologists; environmental managers; engineers (water, civil, environmental); environmental economists; biologists; climatologists, geographers, oceanographers; teachers; curriculum specialists; media practitioners.
- General public such as the entire coastal population of the Mediterranean Basin (in particular those living in identified hotspots and sensitive areas) and the 176 million tourists visiting the Mediterranean annually.
- Media outlets including newsprint, radio, television and online publications.

4.3.2.2. Synergies with the GEF IW:LEARN Project

4.4. Governance

5. Legacy and sustainability
1. Overview and background

1.1 Purpose

The purpose of the present Knowledge Management (KM) strategy is to offer a structured and integrated approach to leverage and systematically share knowledge assets generated by the Child Projects of the MedProgramme with the intended beneficiaries and audiences. In doing so, the strategy aims to maximize the MedProgramme’s impact by: strengthening operational coherence; harnessing synergies and pooling resources, including time; inform policy makers and key stakeholders about the MedProgramme (its activities, needs, outputs, meetings, results, etc.) and of the benefits arising from the Programme interventions. It will also contribute to the objectives of the Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean (Barcelona Convention), the Minamata Convention on Mercury and the Stockholm Convention on Persistent Organic Pollutants by fostering a broader culture of learning, cooperation and environmental sustainability in the region.

1.2 Context

The present KM strategy is designed to support the implementation of the GEF/UN Environment “Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security” (2019-2024). The MedProgramme represents the first GEF programmatic multi-focal area initiative in the Mediterranean Sea aiming to operationalize priority actions to reduce major transboundary environmental stresses in its coastal areas while strengthening climate resilience and water security and improving the health and livelihoods of coastal populations. The MedProgramme is implemented in nine beneficiary countries sharing the Mediterranean basin: Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro, Morocco and Tunisia. Its eight Child Projects cut across four different Focal Areas of the Global Environment Facility (International Waters [IW], Biodiversity [BD], Chemicals and Waste [CW], and Climate Change [CC]) and involve a wide spectrum of developmental and societal sectors, ranging from banking institutions, the private sector, governmental and non-governmental bodies, industry, research, media, and various other organizations. It builds on the MedPartnership and ClimVar & ICZM GEF projects which have enriched the knowledge on the Mediterranean environment and unraveled the implications of climate change and variability; strengthened countries’ mutual trust, cooperation and common purpose; consolidated the partnership among countries,

---

1 The strategy is illustrated in relevant sections of MedProgramme Child Project 4.1. The full document is annexed to individual MedProgramme Child Project documents to provide a harmonized and consistent reference across the entire portfolio of interventions.

2 GEF Lead Implementing Agency: UN Environment. Other GEF Implementing Agency: European Bank for Reconstruction and Development (EBRD). Leading Executing Agency: UN Environment/MAP. Executing partners: UNESCO International Hydrological Programme (IHP), European Investment Bank (EIB), Global Water Partnership – Mediterranean (GWP-Med), WWF Mediterranean Programme Office (WWF MedPO), IUCN, Priority Actions Programme Regional Activity Centre (PAP/RAC), Plan Bleu Regional Activity Centre (Plan Bleu), Specially Protected Areas Regional Activity Centre (SPA/RAC) and the Sustainable Consumption and Production Regional Activity Centre (SCP/RAC).

3 At the time of its approval in October 2016, the MedProgramme was comprised of seven Child Projects. Subsequently, a Mediterranean climate change adaptation project was developed by UN Environment/MAP for financing through the Special Climate Change Fund (SCCF). It was agreed by the UN Environment/MAP, UN Environment and the GEF Secretariat that this SCCF project would be managed for all intents and purposes as an additional Child Project of the MedProgramme. Hence the reference to eight Child Projects of the MedProgramme.

UN bodies, civil society organizations, bilateral donors and the European Union (EU); and tested on the ground the feasibility and effectiveness of technical and policy instruments aimed at addressing major present and future threats to environmental sustainability and climate related impacts.

The Mediterranean countries have worked together with GEF IW support since the late 1990s to set priorities related to national, as well as transboundary environmental concerns (Transboundary diagnostic analysis [TDA] for the Mediterranean Sea\(^6\)) and have jointly agreed on the interventions needed to address these priorities in two Strategic Action Programmes (SAPs): 1) The Strategic Action Programme to Address Pollution from Land-Based Activities (SAP-MED); and 2) the Strategic Action Programme for the Conservation of Biological Diversity in the Mediterranean Region (SAP-BIO).

Following the formal adoption by the Barcelona Convention of the SAP-MED and SAP-BIO (2005 and 2003), the Mediterranean countries translated the SAP priorities into National Action Plans (NAPs), and benefited from international support in moving towards on the ground implementation. The MedPartnership project (2010–2015) supported countries in the initial implementation of the SAPs and of the newly developed Protocol on Integrated Coastal Zone Management (ICZM), which was adopted in 2011.

More recently, the 2015 – 2016 update of the NAPs associated with the SAP-MED has succeeded in creating additional momentum at local, national and regional levels, with a remarkable level of involvement and participation of all stakeholders. In each country, national and local authorities, the industrial sector and Non-governmental Organizations (NGOs) discussed priorities, possible actions and opportunities for investment thus making the NAPs a realistic initiative. These significant achievements, while not yet bringing about measurable changes in the levels of environmental stress or in degradation trends, have however created the indispensable foundation and the enabling conditions for initiating national actions targeting major causes of marine and coastal transboundary degradation. To confront the challenge of implementation, to execute the SAPs and to reinforce implementation of the NAPs thereby achieving concrete and lasting results, are the raisons d’être of MedProgramme.

The Barcelona Convention provides the policy framework under which the MedProgramme will operate and the UN Environment Mediterranean Action Plan (MAP) system will ultimately carry forward the legacy of the outcomes of the MedProgramme’s Child Projects, and in particular of its knowledge management mechanisms, approaches and tools. The MAP Regional Activity Centers (RACs) will play a crucial role in sustaining and amplifying these efforts. Moreover, regular reporting to the Meeting of Contracting Parties to the Barcelona Convention on the progress made by the MedProgramme will be ensured through the UN Environment/Mediterranean Action Plan-Barcelona Convention Secretariat.

\(^6\) Transboundary diagnostic analysis (TDA) for the Mediterranean Sea, UNEP/MAP, 2005 - https://wedocs.unep.org/bitstream/handle/20.500.11822/598/medtda.pdf?sequence=2&isAllowed=y
The Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean (referred to as the Barcelona Convention) is a regional convention adopted in 1976 to prevent and abate pollution from ships, aircraft and land-based sources in the Mediterranean Sea. It is developed under the UN Environment Regional Seas Programme which was established in 1974 with the scope of coordinating activities aimed at the protection of the marine environment through a regional approach. The Mediterranean Action Plan (MAP) was the first UN Environment initiative to be developed under the Programme and became the model for other seas across the globe. Since 1975, MAP has provided the institutional framework for cooperation in addressing common challenges of marine environmental degradation adopted by the Mediterranean States and the European Union.

There are 22 Contracting Parties (Albania, Algeria, Bosnia and Herzegovina, Croatia, Cyprus, Egypt, the European Union, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Monaco, Montenegro, Morocco, Slovenia, Spain, Syria, Tunisia, Turkey) and they decide on MAP strategies, budget and programme of work in pursuit of MAP’s goal at their Ministerial level meetings, held every two years. They appoint Focal Points to review the progress of work and ensure the implementation of recommendations at the national level. A rotating Bureau of six representatives of the Contracting Parties guides and advises the MAP Secretariat (located in Athens) in the interim period between the biannual meetings.

The Minamata Convention on Mercury⁶, the Stockholm Convention on Persistent Organic Pollutants⁷, the Basel Convention⁸ and the Global Programme of Action for the Protection of the Marine Environment from Land-based Activity (GPA)⁹ are also among the key guiding frameworks for the Child Projects focusing on reduction of land-based pollution (Component 1 of the MedProgramme).

In terms of knowledge management (KM), the MedProgramme holds a tremendous opportunity to generate new information and consciousness, encourage transboundary cooperation, scale up needed investments and raise general awareness about the benefits arising from good governance and management of natural resources in coastal areas.

The eight Child Projects (CP) of the MedProgramme are expected to deliver a set of complementary results embracing the categories of priorities identified by the TDA for the Mediterranean Sea which are translated into three components of the program: i) Reduction of Land-Based Pollution in Priority Coastal Hotspots and measuring progress to impacts; ii) Enhancing Sustainability and Climate Resilience in the Coastal Zone; and iii) Protecting Marine Biodiversity (see Table 2, MedProgramme Components, Child Projects and GEF Focal Areas, page 16).

---

⁷ The Stockholm Convention on Persistent Organic Pollutants is an international environmental treaty, signed in 2001 and effective from May 2004, that aims to eliminate or restrict the production and use of persistent organic pollutants (POPs). More info: http://chm.pops.int

⁸ The Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal is an international treaty that was designed to reduce the movements of hazardous waste between nations, and specifically to prevent transfer of hazardous waste from developed to less developed countries (LDCs). The Convention was opened for signature on 22 March 1989 and entered into force on 5 May 1992. As of February 2018, 185 states and the European Union are parties to the Convention. More info: http://www.basel.int

⁹ The UNEP Global Programme of Action (UNEP/GPA) aims at preventing the degradation of the marine environment from land-based activities by facilitating the realization of the duty of States to preserve and protect the marine environment. It is unique in that it is the only global initiative directly addressing the connectivity between terrestrial, freshwater, coastal and marine ecosystems. More info: https://www.unenvironment.org/nairobi-convention/une-p-global-programme-action-unepga
The fourth component (Knowledge Management and Programme Coordination) includes Child Project 4.1 “Mediterranean Sea LME Environment and Climate Regional Support Project” which plays a key role within the MedProgramme as it “implements mechanisms for Programme-wide learning and dissemination of knowledge, monitoring the Programme’s progress to impacts, and fostering synergistic interactions among Child Projects”. Within the GEF programmatic approaches there is a need to ensure programme coherence and impact through coordination among diverse sets of multi-focal area Child Projects contributing to the same programme outcomes. A Support Project functions as a trait d’union (a common link) among Child Projects by providing overall coordination of the programme portfolio, resource-saving services, a robust system to managing knowledge effectively and a sound action plan for gender mainstreaming.

The present strategy provides the context and the boundaries within which KM will operate in the MedProgramme, essentially answering the strategic questions: where are we now? (baseline and project needs), what do we want to achieve? (vision and objectives), and how to get there? (framework for processes, tools, activities and governance).

The present strategy does not aim to provide a final definition of the tools, software and instruments that will be used to reach its goals. Although a wide range of them is considered and analysed, their selection will take place during the inception phase of the MedProgramme together with its stakeholders (countries and executing partners). This process will be driven by the specific needs of the stakeholders and will follow a competitive process for selection ensuring an efficient use of resources.

1.3 Where are we? (Baseline Scenario)

A baseline scenario in the context of this strategy was built through a detailed scanning of existing initiatives related to KM and the objectives of the MedProgramme, and a survey addressed to project designers aimed at diagnosing needs and expectations related to KM and outreach of Child Projects.

The overview of regional (and global when relevant) initiatives on knowledge/ information management focusing on pollution reduction, biodiversity, water resources (fresh water and marine) and climate change revealed that there is a great potential for cross-fertilization and incremental innovation. At the same time, the analysis brought to light some challenges, such as fragmentation, the inability of some projects to sustain their results, insufficient resources or attention devoted to KM approaches, gaps in information sharing, among others, which point to the need to clearly address these challenges at the onset of the MedProgramme. The responses to the web-based survey served to inform the design of the strategy and its levels, in terms of target audiences, objectives, tools and activities.

1.4 What do we want to achieve? (KM Vision and Objectives)

The MedProgramme strives to become a knowledge hub in the Mediterranean region to scale up successful practices, encourage broader adoption, promote knowledge sharing and support the common objectives of the parties to the Barcelona Convention.

In this effort, it also pioneers a new integrated KM methodology for GEF-financed programs in line with GEF programmatic approaches. The strategy puts in place a framework that will underpin and guide the MedProgramme knowledge-sharing activities and support the achievement of the programme outcome(s), reflecting the complexity of its portfolio while ensuring that its findings are effectively translated, shared and delivered to the intended audiences.
The strategy aims to maximize the MedProgramme impact by (the KM strategy objectives):

- Strengthening coordination and operational coherence among Child Projects and their partners;
- Monitoring the execution of the activities under the entire Programme to assess progress to impact;
- Leveraging and systematically sharing knowledge assets generated by the Child Projects with the intended beneficiaries and audiences;
- Strengthening the science-policy interface (SPI) and influencing decision making through data and information sharing, capacity building, and regional stakeholder engagement;
- Supporting the objectives of the Barcelona Convention and the work of the MAP system through effective stocktaking and scaling up of programme results; and
- Fostering incremental innovation within GEF programmatic approaches and enriching the knowledge base of GEF Implementing and Executing Agencies.

1.5 How to get there?

In order to achieve this vision and related objectives, three interconnected functional levels have been identified to articulate the KM strategy:

1. at the **PORTFOLIO LEVEL** to support the work of project managers and executing partners by providing project management tools and training to key regional stakeholders;
2. at the **GENERAL PUBLIC LEVEL** to share results, inform and influence target audiences by reaching out to and engaging with civil society, media, and representatives of non-scientific community;
3. at the **POLICY and DECISION-MAKING LEVEL** to support the Contracting Parties of the Barcelona Convention, relevant decision makers in the region and the work of GEF Implementing and Executing Agencies by contributing to relevant regional policy processes and related GEF initiatives (particularly the IW:LEARN project).

Organizational coherence and strong synergies among MedProgramme Child Projects are considered critical to sustain effective knowledge sharing and ensure the successful achievement of the KM objectives. Careful consideration was given to the different types of knowledge that will be generated throughout the lifespan of the programme to ensure that intangible assets (tacit knowledge, intended as human and intellectual capital) as well as technical and codified information (explicit knowledge) are properly valued and managed.

1.6 Methodology

The strategy was prepared during the period June - September 2018 in the framework of the Project Preparation Grant (PPG) phase of the MedProgramme (October 2017- December 2018) in close coordination with the senior staff of the UN Environment/Mediterranean Action Plan Secretariat. It is based on the analysis of the Program Framework Document (PFD) of the MedProgramme various background documentation (including the Report from the First Regional Consultation held on 7-8 March 2018 in Athens which confirmed the decision of the countries to prepare a KM strategy), the results of a dedicated online survey, exchanges

---

10 Activities and tools outlined in this strategy contribute to one or more of these operational levels.

with project designers (with in-depth review of available drafts of Child Project documents), desk research, contact with relevant technical counterparts (i.e. for project management tool, visualization, etc). Further inputs were collected during the Second Regional Consultations for the MedProgramme held on 20 and 21 September 2018 at UNESCO HQ in Paris. Moreover, the design of the strategy took into account lessons learned from the predecessor project of the MedProgramme, the MedPartnership Project. The approach illustrated in the present strategy will be operationalized during the MedProgramme inception phase in 2019.

1.7 Implementation

The overall KM strategy is built within the MedProgramme Support Child Project 4.1 and executed by the MedProgramme Coordinating Unit (MedPCU) in close coordination with all Child Projects. Outcomes and outputs of Child Project 4.1 are closely aligned with the present strategy, which, in addition to the logframe in the project document, also envisions actions to be possibly undertaken in the course of the execution of the Programme. The final detailed list of tools, activities and initiatives (and their costs) will be validated during the MedProgramme inception phase and fully agreed with the countries, executing partners and stakeholders of the Programme.
Fig. 1 Knowledge production, management and dissemination in the MedProgramme
2. Baseline scenario and projects needs

2.1 Overview of regional KM initiatives

“Connection, not collection: that’s the essence of knowledge management.” –Tom Stewart

As the MedProgramme cuts across four different GEF Focal Areas (Biodiversity, Chemicals and Waste, International Waters and Climate Change), its results will be relevant for many different sectors and activities in the Mediterranean region. A review of the existing initiatives related to knowledge management in these domains was carried out with the purpose to: 1) avoid unnecessary duplication; 2) replicate and build on successful practices; and 3) establish potential synergies and partnerships. The research included knowledge platforms, databases, initiatives and projects on knowledge/information sharing in the Mediterranean region (or globally when relevant) focusing on pollution reduction, biodiversity, water resources (fresh and marine) and climate change.

The result is a detailed knowledge map that will be useful during the execution of the MedProgramme to: establish collaborations (for content sharing and use of respective networks to increase impact and dissemination), benefit from existing collected data and technical information, make reference to relevant policy and legal frameworks, get inspiration from effective data visualization examples and platform designs, and replicate/participate in successful awareness raising campaigns and capacity building activities (see legend in Table 1 “Relevance for the MedProgramme”).

Against this baseline, the MedProgramme will generate new data and develop additional capacity of beneficiary countries to reduce pollution in marine and freshwater coastal bodies, increase resilience to climate change, improve the governance of water resources, promote the nexus approach and protect biodiversity and ecosystems.

The analysis of the knowledge map shows that there is an existing wealth of information in these domains. This poses a number of challenges as well as opportunities for effective knowledge sharing. The risk of fragmentation is high, and coordination among similar or complementary initiatives is not always optimal. Often, the results of projects are not fully sustained after their closure (possibly due to lack of funds after project execution is completed, insufficient ownership of results by key stakeholders and partners, or inadequate emphasis and instruments dedicated to KM). Another crucial issue remains the integration of different environmental datasets. Aware of these challenges, the MedProgramme is tackling KM at the very outset identifying possible solutions to overcome them. Moreover, there is ample room for cross-fertilization and learning: one must avoid the temptation to reinvent the wheel, and build instead on existing knowledge useful for incremental innovation. Lastly, the wealth of partners involved in the MedProgramme and especially the MAP system, can prevent pitfalls due to lack of ownership by leveraging and sustaining the KM efforts through their networks.

Legend Table 1

| Potential Collaboration for Content Sharing and use of Respective Networks to Increase Impact and Dissemination | Relevant Scientific Data and Technical Information |
| Reference to Key Policy and legal Frameworks | Effective Example(s) of Data Visualisation, Web Design and UX |
| Successful Awareness Raising, Outreach and Capacity Building |

GEF Focal Areas (International Waters, Biodiversity, Chemical and Waste, Climate Change)
A selection of platforms, databases, initiatives and projects on knowledge - and information - sharing in the Mediterranean region (or globally when relevant) focusing on pollution reduction, biodiversity, water resources and climate change compiled for the purpose of drawing a KM baseline scenario for the GEF/UN Environment “MedProgramme”.

### Table 1: Overview of selected knowledge platforms and initiatives relevant for the MedProgramme (2018)

## Baseline scenario and projects needs

MedProgramme | Knowledge Management Strategy
--- | ---

### GODEM - Optimised Management of Waste in the Mediterranean
- **EU Commission**
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2010 - 2012
- **Description:** The project is aimed at setting up a network for the exchange of information and experiences between local authorities and institutions in the Mediterranean area.

### Green Growth Knowledge Platform - GGP
- **Executing Partners:** GGGI, OECD, World Bank, UNDP.
- **Geographical Area:** Global
- **Activity Period:** 2012 - ongoing
- **Description:** The GGP is a global community of organizations and experts committed to collaborative generating, managing and sharing green growth knowledge and data.

### H2020/SEIS Info system
- **Executing Partners:** EEA, UN Environment MAP, INFRA
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2015 - ongoing
- **Description:** ENI SEIS II Project aims to contribute to the reduction of marine pollution in the Mediterranean by developing a Shared Environmental Information System (SEIS) supporting the regular production and sharing of quality assessed Environmental data, indicators and information.

### ICZM Platform
- **Executing Partners:** PA/PAC
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2008 - ongoing
- **Description:** This interactive space is designed as a multi-disciplinary "tank" of information, documentation and good practices related to ICZM in the Mediterranean (and elsewhere), as well as a place for networking and exchange. This platform provides information on the legal and policy frameworks, capacity building, awareness raising, data base of projects, library and the resources for networking.

### IMAP Info Pilot System
- **Executing Partners:** UN Environment MAP, INFRA
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2016
- **Description:** Pilot IMAP compatible Data and Information System, connected to MAP Components' information systems and other relevant regional knowledge platforms, will provide data based on data standards and data dictionaries for ten selected IMAP Common Indicators.

### INSPIRE Knowledge Base
- **Member States of the EU**
- **Geographical Area:** EU
- **Activity Period:** 2007 - ongoing
- **Description:** The INSPIRE Directive aims to create a European Union spatial data infrastructure for the purposes of EU environmental policies and policies or activities which may have an impact on the environment. This European Spatial Data Infrastructure will enable the sharing of environmental spatial information among public sector organisations, facilitate public access to spatial information across Europe and assist in policy-making across borders. INSPIRE is based on the infrastructure for spatial information established and operated by the Member States of the European Union. The Directive addresses 34 spatial themes needed for environmental applications. The Directive came into force on 15 May 2007 and will be implemented in various stages, with full implementation required by 2021.

### INTEGRATED COASTAL WATER MANAGEMENT FOR MED (ICWM)
- **EU, Planckt**
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2015 - ongoing
- **Description:** The objectives of ICWM for MED is to demonstrate the benefits of a service based on the integration of Earth Observation based products, Satellite Communication and Navigation together with Terrestrial assets and co-owning features, for the set-up of an improved coastal surveillance and water quality monitoring service.

### Interreg Mediterranean
- **European Regional Development Fund, IPA fund**
- **Geographical Area:** Mediterranean Basin
- **Activity Period:** 2014 - 2020
- **Description:** 13 countries are working together in the transnational European Cooperation Programme for the Mediterranean area towards low carbon economy, the protection of natural and cultural resources and the strengthening of innovation. The main objective of the Interreg MED Programme is to promote sustainable growth in the Mediterranean area by fostering innovative concepts and practices and a reasonable use of resources and by supporting social integration through an integrated and territorially based cooperation approach. In the period 2014-2020, Interreg MED Programme will promote cooperation between a varied typology of actors of these thirteen Mediterranean countries.

### IOCE
- **Executing Partners:** UNESCO IOC
- **Geographical Area:** Global
- **Activity Period:** 1961 - ongoing
- **Description:** The programme "International Oceanographic Data and Information Exchange" (IOC) of the "Intergovernmental Oceanographic Commission" (IOC) of UNESCO was established in 1961. Its purpose is to enhance marine research, exploitation and development, by facilitating the exchange of oceanographic data and information between participating Member States, and by meeting the needs of users for data and information products.

### IWLEARN (Global Environment Facility’s International Waters Learning Exchange and Resource Network)
- **Executing Partners:** GEF
- **Geographical Area:** Global
- **Activity Period:** 2004 - ongoing
- **Description:** IWLEARN is the Global Environment Facility’s (GEF) International Waters Learning Exchange and Resource Network. The IWLEARN project was established to strengthen basin management around the globe by collecting and sharing best practices, lessons learned, and innovative solutions to common problems across the GEF International Waters portfolio. It promotes learning among project managers, country officials, implementing agencies, and other partners.

### IWLEARN Groundwater Community of Practice
- **Executing Partners:** GEF
- **Geographical Area:** Global
- **Activity Period:** 2012 - ongoing
- **Description:** The GW CoPs aims to accelerate learning from and within the GEF IW portfolio, and promote replication of good-practices in transboundary freshwater management. The CoPs acts as a catalytic coalition among GEF IW projects to promote learning that meets project-level priorities. It is designed to build on existing knowledge from inside and outside the GEF portfolio and to be responsive to the learning needs of the GEF IW projects. The CoP provides an opportunity to build capacity on groundwater resources management and promote the conjunctive management with surface freshwater and marine waters.

---

Each of the above initiatives is designed to accelerate learning from and within the GEF IW portfolio and promote replication of good practices in transboundary freshwater management.
### 2. Baseline scenario and projects needs

#### MAMIAS - Marine Mediterranean Invasive Alien Species

**Website:** [http://www.mamias.org](http://www.mamias.org)

**Geographical Area:** Mediterranean Sea

**Activity Period:** 2012 - ongoing

**Description:** The Database includes among Alien species, cryptogenic ones. Tropical-Atlantic species, which have expanded their geographic distribution in the Mediterranean, are noted as range expansion, or vagrant. The Database includes also species that have been occasionally reported as alien but were subsequently excluded from lists, along with the reasoning of their exclusion.

#### MAPAMED

**Website:** [http://www.rac-spa.org/mapamed](http://www.rac-spa.org/mapamed)

**Geographical Area:** Mediterranean Sea

**Activity Period:** 2012 - ongoing

**Description:** MAPAMED (Marine Protected Areas in the Mediterranean) is a GIS database that gathers information on marine protected areas of the Mediterranean, and more generally on sites of interest to the conservation of the marine environment. It is developed and jointly administered by the MedPAN association and SPARAC. MAPAMED (i) facilitates the access and the sharing of data on Mediterranean MPAs, (ii) allows the analysis and the evaluation of the status and trends of the MPA-network and (iii) identifies ecological and management issues at a supra-AMP scale.

#### MapX

**Website:** [https://www.mapx.org](https://www.mapx.org)

**Geographical Area:** Global

**Activity Period:** Ongoing

**Description:** MapX was developed by UN Environment, the World Bank and the Global Resource Information Database (GRID-Geneva) to capitalize on the use of new digital technologies and cloud computing in the sustainable management of natural resources. One of the founding principles was to equalize information held by different stakeholders as a prerequisite to better dialogue, decision making and actions. MapX evolved from an initial focus on extractive resources to include a range of different resource types and themes. Of particular relevance for the MedProgramme are the data layers in MapX developed by UN Environment for MapX to support countries in raising their national reports under the CDM and in meeting their reporting obligations on POPs and facilities reporting for the Stockholm Convention.

#### Marine Biodiversity and Ecosystem Functioning EU Network of Excellence - MarBEF

**Website:** [http://www.marbef.org](http://www.marbef.org)

**Geographical Area:** Mediterranean Basin

**Activity Period:** 2001 - ongoing

**Description:** The key task of the MarBEF Network is the integration of different resources related to marine biodiversity. The inventory of these resources can be found on this website. At the moment, this relational database includes information on different European marine biological research sites and European marine biodiversity datasets. The European Register of Marine Species, EMNIS and the European node of the Ocean Biogeographic Information System, EuroBISC is also accessible through this website. The terms of use of data are formalised in the MarBEF data policy.

#### MED-POL Info System

**Website:** [http://www.info-rac.org/info-activities](http://www.info-rac.org/info-activities)

**Geographical Area:** Mediterranean Basin

**Activity Period:** 2004 - 2009

**Description:** A key task of the MedBEF Network is the integration of different resources related to marine biodiversity. The inventory of these resources can be found on this website. At the moment, this relational database includes information on different European marine biological research sites and European marine biodiversity datasets. The European Register of Marine Species, EMNIS and the European node of the Ocean Biogeographic Information System, EuroBISC is also accessible through this website. The terms of use of data are formalised in the MarBEF data policy.

#### MED-3R - Euro-Mediterranean Strategic Platform for a Suitable Waste Management Recycle, Reduce, Reemploy

**Website:** [http://www.med-3r.org/index.php/en/about/the-med-3r-project](http://www.med-3r.org/index.php/en/about/the-med-3r-project)

**Geographical Area:** Mediterranean Basin

**Activity Period:** 2012 – 2015

**Description:** MED-3R sets up an institutional innovation of multi-level governance, implemented on the basis of strategic platform: “The Euro-Mediterranean Strategic Platform for a Suitable Waste Management” to the benefit of technical managers and experts on waste management over the Mediterranean basin.

#### MEDACES - Mediterranean Database of Cetacean Strandings

**Website:** [medacies.ucn.es/home_eng.html](http://medacies.ucn.es/home_eng.html)

**Geographical Area:** Mediterranean Sea

**Activity Period:** 2001 - ?

**Description:** In November 2001, the 12th Ordinary Meeting of the Contracting Parties to the Convention for the Protection of the Mediterranean Sea against Pollution and its Protocols, within the “Biological Diversity and the Protection of Specially Protected Areas” section, recommended for implementing the Action Plan for the Conservation of Cetaceans in the Mediterranean Sea, to approve the offer by Spain with regard to the establishment in Valencia of a Mediterranean database on cetacean strandings (MEDACES).

#### MedCIP

**Website:** [http://medcip.grid.unep.ch](http://medcip.grid.unep.ch)

**Geographical Area:** Mediterranean Basin

**Activity Period:** 2000 - 2015

**Description:** MedCIP is an online multicountry effort to share data and information on Climate Change in the Mediterranean coastal areas. It is a “portal of portals” which gathers data, information and web links towards other institutions (national and regional), in support of the implementation of the IPCC protocol.

#### Mediterranean Basin Biodiversity Hotspot

**Website:** [http://www.birdlife.org/cepf-med/hotspot](http://www.birdlife.org/cepf-med/hotspot)

**Geographical Area:** Mediterranean Basin

**Activity Period:** 2012 – 2022

**Description:** During the initial investment, 108 grants were awarded to 84 different organizations in 12 countries. This first investment phase demonstrated that civil society organizations do exist in each hotspot country, and that adequate financial support, combined with technical support, has the potential to build strong constellations able to tackle conservation issues at the local level. CEPP’s second phase of investment will focus on protecting plants, promoting regional networking and conserving three ecosystems—coastal, freshwater and traditionally managed landscapes. CEPP is a joint initiative of Agence Française de Développement, Conservation Internationale, the European Union, the Global Environment Facility, the Government of Japan, the MacArthur Foundation and the World Bank.

#### MEDITERRANEAN OBSERVATORY ON ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

**Website:** [http://obspla.planbleu.org/en/](http://obspla.planbleu.org/en/)

**Geographical Area:** Mediterranean Basin

**Activity Period:** Ongoing

**Description:** Plan Bleu, acting as a Mediterranean Observatory on Environment and Sustainable Development, has developed an experience in collecting, managing and disseminating data on Sustainable development issues in the Mediterranean Region. One of Plan Bleu’s mission is to provide the Contracting Parties of Barcelona Convention with environmental and sustainable development statistics, indicators and assessments to support their action and decision making processes.

### Strategic Approach to Informational Chemicals Management (SAICM)

**Donors:** UNESCO-IHP, EU, others  
**Format:** EU, JRC, EEA, DGVEnv, DG-ENV, JRC, EEA, others  
**Activity Period:** 2006 - ongoing

**Description:** SAICM was developed by a multi-stakeholder and multi-sectoral Preparatory Committee and supports the achievement of the 2020 goal agreed at the 2002 Johannesburg World Summit on Sustainable Development. SAICM overall objective is the achievement of the sound management of chemicals throughout their life cycle so that by the year 2020, chemicals are produced and used in ways that minimize significant adverse impacts on the environment and human health.

**Geographical Area:** Global

### The Mediterranean Biodiversity Platform

**Executing Partners:** SP/ITC  
**Activity Period:** 2017 - ongoing

**Description:** The Mediterranean Biodiversity Platform is an online tool to inventory, catalog and store data on marine and coastal biodiversity in the Mediterranean, and view them on maps.

**Geographical Area:** Mediterranean Sea

### The MPA Action Agenda

**Donors:** WWF and partners  
**Activity Period:** 2014 - ongoing

**Description:** The MPA Action Toolkit is an online platform designed for MPA managers and establishments, marine researchers and other MPA advocates. The objective of this online platform is to share knowledge on MPAs and tools that can contribute to MPA advocacy. On this toolkit you find infographics, videos, academic articles, reports and other types of material that can be used for MPA advocacy and related activities.

**Geographical Area:** Global

### The Strategic Partnership for the Mediterranean Sea Large Marine Ecosystem (MedPartnership) Project

**Executing Partners:** UNEP-WCMC  
**Activity Period:** 2010 - 2015

**Description:** The Strategic Partnership for the Mediterranean Sea Large Marine Ecosystem (MedPartnership) is a collective effort of leading environmental institutions and organizations together with countries sharing the Mediterranean Sea to address the main environmental challenges that Mediterranean marine and coastal ecosystems face. The goals include: to improve environmental conditions of pollution and biodiversity hotspots and other priority areas under stress, to promote the sustainable use of marine and coastal resources through integrated approaches, to reduce pollution from land-based sources, to enhance the protection of critical habitats and species, and to integrate climate considerations into national marine and coastal planning.

**Geographical Area:** Mediterranean Basin (Albania, Algeria, Belgium and Herzegovina, Croatia, Egypt, Lebanon, Libya, Morocco, Montenegro, Palestine, Syria, Tunisia and Turkey)

### UN Environment World Conservation Monitoring Centre

**Donors:** GEF, EU, others  
**Activity Period:** Ongoing

**Description:** The UN Environment World Conservation Monitoring Centre (UNEPE WCMC) works with scientists and policy makers worldwide to place biodiversity at the heart of environment and development decisions. Our mission is to enable enlightened choices for people and the planet. Our 100-strong international team are recognised leaders in their field and have unrivalled understanding of the institutional landscape surrounding biodiversity policy and ecosystem management. Based in Cambridge, UK, UNEP-WCMC is a collaboration between UN Environment and the UK charity, WCMC. By working with expert partners worldwide, we draw together, analyse and interpret information on biodiversity, and strengthen the ability of others to do so.

**Geographical Area:** Global

### Water Information System for Europe (WINS)

**Donors:** UNESCO-IHP, EEA  
**Activity Period:** 2017 - ongoing

**Description:** Launched in January 2017 by the International Hydrological Programme of UNESCO, WINS is an open-access and participatory platform to share, access and visualize water-related information at all levels. It provides also a networking hub through online working groups, which aims to facilitate exchange among stakeholders. As of June 2018, 41 Member States have joined the platform.

**Geographical Area:** Europe Marine Environment

### WISE - Water Information System for Europe

**Donors:** EU Commission, European Environmental Agency (EEA)  
**Activity Period:** 2007 - ongoing

**Description:** The Water Information System for Europe (WISE) is a partnership between the European Commission (DG Environment, Joint Research Centre and EEA) and the European Environment Agency. WISE is a gateway to information on European marine issues in support of ocean governance and ecosystem based management

**Geographical Area:** Global

### WOCAT - World Overview of Conservation Approaches and Technologies

**Donors:** ICARDA, FAO, ISRIC, ICIMOD  
**Activity Period:** 1992 - ongoing

**Description:** The World Overview of Conservation Approaches and Technologies (WOCAT) is a Network that was established in 1992. The WOCAT Network launched efforts to compile, document, evaluate, share, disseminate, and apply sustainable land management (SLM) knowledge. It was far ahead of others in recognizing the vital importance of SLM and the pressing need for corresponding knowledge management. In early 2014, WOCAT’s growth and ongoing improvement culminated in its being officially recognised by the UNCCD as the primary recommended database for SLM best practices.

**Geographical Area:** Global

### World Resource Institute

**Donors:** UNEP, UNESCO-IHP, FAO, ICIMOD, IGBP  
**Activity Period:** 1992 - ongoing

**Description:** World Resources Institute (WRI) is a global research organization that spans more than 60 countries. Our more than 700 experts and staff turn big ideas into action at the nexus of environment, economic opportunity and human well-being. We start with data, creating user-friendly information systems, protocols and standards. We conduct independent, unbiased research to analyze relationships and design solutions, and communicate our findings in a compelling manner.

**Geographical Area:** Global

### World Water Quality Portal

**Donors:** UNESCO-IHP  
**Activity Period:** Ongoing

**Description:** UNESCO, through its International Initiative on Water Quality (INWaQ) under IHP has launched the first comprehensive worldwide water quality online portal for freshwater systems, lakes and rivers, retrieved from satellite-based earth observation data, to assist with global water quality assessment and capacity building.

**Geographical Area:** Global
2.2 Analysis of preliminary survey results

Every project creates knowledge. Every project depends on knowledge. –Unknown

The eight Child Projects of the MedProgramme are expected to produce different sets of outputs and results while contributing to the overarching goal of enhancing environmental security in the region, embracing three categories of transboundary concern (components 1, 2 and 3) as illustrated in Table 2. The fourth component hosts the Support Child Project on coordination and knowledge management.

In order to diagnose KM-related needs and expectations of Child Projects (CP), a preliminary survey was prepared and shared with project designers (July-August 2018). The designers of all projects participated in the web-based survey (27 questions), sometimes with representation of more than one person per CP. The analysis of the answers helped building the KM approach, identifying tools and levels of intervention particularly related to:
• Target audiences
• Project / Programme management
• Managing and Visualizing the data
• Information and Knowledge Management

Relevant results of the survey are presented below by cluster topics, however overall the following can be observed:

• The Child Projects of the MedProgramme will produce a rich and heterogenous amount of data and results (quantitative, qualitative, normative). A responsive system to manage the information flow is therefore needed to: capture, store and digest raw data; ensure smooth reporting and coordination; offer a digital representation of the progress through visualization tools for both spatial and non-spatial information; and use the collective information to package appropriate products and knowledge-sharing assets for the intended target audiences of the MedProgramme.

• Data sharing and data collection modalities are critical for generating and managing knowledge. Defining how projects will prepare and make available their data should be addressed at the beginning of the Inception phase of the MedProgramme, once indicators are selected for all Child Projects. A dedicated workshop should be organized to identify sharing standards, protocols and practices for data collection and reporting, including to ensure data quality, respect of privacy and compatibility with data visualization tools on the MedProgramme portal.

• The primary audience of the MedProgramme CPs are policy- and decision-makers in the region. However, in order to influence policy making there is a need to engage and involve a large number of diverse stakeholders to inform them about the findings and benefits arising from the MedProgramme interventions. To this end, three different functional levels (see page 32) and groups of audiences/ stakeholders have been identified to articulate the KM strategy.

• Technical practitioners are among the principal consumers of scientific reports and detailed assessments; therefore, each Child Project shall consider specific groups of technical practitioners in their stakeholder analysis to make sure that the KM strategy can incorporate these views at the programme level.

• The mapping of stakeholders and related engagement plan is crucial to ensure the impact of the KM strategy and of the MedProgramme as a whole. It is important to identify knowledge suppliers/ brokers, knowledge recipients/ beneficiaries and potential change agents at the project level (to be done during the inception phase) and then make sure that these are involved and engaged at the Programme level (see more page 25).

• During the Project Preparation Grant (PPG) phase (June-September 2018) details on activities, stakeholders, outputs and indicators of every Child Project were not available due to the staggered timeframes in preparing the individual project documents. However, through the survey (and several bilateral consultations) it was possible to collect enough insights into the planning of each CP to suggest appropriate solutions and frameworks to manage knowledge holistically across the MedProgramme portfolio.

---

12 Ref. The preparation of the survey benefitted from the expert and kind advice of staff from UN Environment, Plan Bleu and PAP/RAC. The full questionnaire, which was shared through Google Forms, is annexed in .pdf
Target audiences

[Q2] Who will the primary target audience for your project results be?

The respondents identify as their principle target audience policy makers and the parties to the Barcelona Convention, followed by technical practitioners and civil society. Other relevant audiences are: industry, academia and other UN bodies.

[Q4] Why is your data important?

The data produced will have different objectives, including the priorities to enhance environmental sustainability, increase livelihoods, and adapt to climate change.
Project/Programme management

**[Q3]** When will your project start to produce data/results?

Three projects will start producing data right away while other projects will produce data at different times.

**[Q7]** Will you and your collaborators be willing to adopt the selected project management tool?

85% of respondents are willing to adopt a web-based project management tool with initial training provided.

Managing and Visualizing the Data

**[Q10]** What type of data will you collect and manage as part of your project?

Chart 3

Chart 4

Chart 5
[Q11] If your project works with geospatial data, what scale do you work at?

[Q13] Does your project include the collection and management of time series data?

[Q10,11,13,14] Six of the CPs will produce geospatial data from site to regional levels, five will produce qualitative data (see also [16], data from surveys), four will use existing data from external sources, and three will generate new raw data, some of which will be in the form of time series with varying update frequency.

Chart 8 [Q12] If your project produces qualitative data, what kind is it?
[Q16] What format will you prepare your data in?

A majority of respondents will use Excel to manage their data. Four will use MS Access or similar. Most projects will also manage (qualitative) data in Word, xml and even hard copies (e.g. from questionnaires and surveys). Five projects will manage ArcGIS or ArcMap files and three expect to generate digital images.

[Q5] What language(s) will your data be produced in?

Data will be produced in six different languages, with the vast majority producing data in English (41%) and/or French (31%) and Arabic.

[Q17] Within your Organization/Institution, what type of online visualization tools have you been using so far (if any)?

Most respondents have used charts/graphs and GIS to visualize their data in the past while a smaller number use reports, multimedia and statistics.
Information and Knowledge Management

<table>
<thead>
<tr>
<th>Q8</th>
<th>Have you ever used a Knowledge and Information Management platform?</th>
</tr>
</thead>
</table>
About half of the respondents have used information and knowledge management platforms before.

<table>
<thead>
<tr>
<th>Q23</th>
<th>What is your key objective for an online (geospatial) platform?</th>
</tr>
</thead>
</table>
Respondents’ expectations in relation to the platform are multiple and include an internal dimension related to data management and information/knowledge sharing among projects, and a public dimension related to showcasing impact, raising awareness and informing policy making in a transparent way. The platform should also help gather the elements that will be needed to tell engaging stories over the lifespan of the programme.

<table>
<thead>
<tr>
<th>Q26</th>
<th>What is your key objective for an online (geospatial) platform?</th>
</tr>
</thead>
</table>
To this open question, respondents illustrated a variety of needs including:
- Engage partners from the beginning so they know they have a channel to promote their work (addressed at the 3 functional levels);
- Help track progress towards set goals (addressed at the portfolio level);
- Improve the internal work between executing partners and the way to communicate (addressed at the portfolio level);
- Facilitate reporting to the GEF (e.g. by timely gathering relevant information from executing partners) (addressed at the portfolio and policy levels);
- Effectively manage documents collaboratively among the co-executing partners (addressed at the portfolio level);
- Provide a roster of environmental experts (addressed at the portfolio level and policy levels);
- Provide a solid and centralized structure as well as cost-effective tools to collect, assess and share data and information (addressed at the portfolio level);
- The strategy should be designed in a way to primarily serve the governments of the contracting parties who have the executive powers to manage the environment, coast, biodiversity, natural resources (addressed at the policy level);
- The strategy should timely inform partners about expectations regarding their contributions to the communication strategy and the amount of work expected (addressed at the portfolio level); and
- The KM strategy should become a best practice for other programmatic approaches and projects.
2.3 MedProgramme Stakeholders

Stakeholder participation is an inherent part of the structure of MAP and the Barcelona Convention where all countries (represented by the MAP focal points) form the Contracting Parties to the Barcelona Convention. In addition, about 100 NGOs and Intergovernmental Organizations (IGOs), termed “partners” are participants to the meetings of the Barcelona Convention. It should also be stressed that stakeholders participated in the formulation of the TDA-MED, SAP-MED, SAP-BIO and the NAPs of the countries, on which the MedProgramme is based. In summary, the key stakeholders that CP 4.1 will strive to involve at national level include:

- Public Sector: ministries responsible for water resources; environment; spatial and development planning; transport; tourism; fisheries; industry; maritime affairs; health; fire-fighting; community development; education; culture and local government authorities.

- Private Sector: national and regional organizations representing: farmers; fisher folk; manufacturers/industrialists; tourism and aquaculture sector; banks; insurers.

- Non-governmental Organizations (NGOs): national trusts; conservation associations; women’s organizations; community-based organizations (CBOs);

- Scientific community: researchers; sociologists; environmental managers; engineers (water, civil, environmental); environmental economists; biologists; climatologists, geographers, oceanographers; teachers; curriculum specialists; media practitioners;

- General public such as the entire coastal population of the Mediterranean Basin (in particular those living in identified hotspots and sensitive areas) and the 176 million tourists visiting the Mediterranean annually.

At a regional and global level, the stakeholders will be the various signatories to the relevant Multilateral Environmental Agreements (e.g. Barcelona Convention and its Protocols, Convention on Biological Diversity, Basel Convention, United Nations Convention to Combat Desertification, Rotterdam Convention, Stockholm Convention) and all individuals and organizations associated with the achievement of the 2030 Sustainable Development Goals.

The Terminal Evaluation of MedPartnership observed that in spite of the wide stakeholder engagement during implementation of the MedPartnership, the involvement of NGOs, private sector, and Mediterranean countries that are not eligible for GEF funding could have been greater. In the implementation of MedProgramme and its Child Projects, the Lead Implementation and Executing Agencies will foster opportunities to more closely involve NGOs and the private sector in project activities and to engage more closely with non-GEF eligible countries that share the Large Marine Ecosystem (LME) of the Mediterranean Sea. Child Project 4.1 will play an important role in this effort by broadly disseminating information on, and the progress and results of the MedProgramme, stimulating all other Child Projects to design and implement effective stakeholder participation strategies, and promoting involvement in the project’s milestone events of relevant NGOs, of the private sector (in particular the tourism industry), and of all non-beneficiary Mediterranean countries.

As regards to specific stakeholders, each Child Project shall undertake its own research and analysis based on respective project objectives to identify partners, target groups and beneficiaries. This analysis is essential to understand who the different players are, their expectations and interest, their characteristics, commitment and constraints, their influence over others, etc. The MedProgramme KM Strategy will support the jump-start and continuous engagement of these groups at the programme level with targeted actions and outreach tools.
2. Baseline scenario and projects needs

2.4 Contributing to the Programme-wide KM

Each Child Project is expected to participate in the common knowledge management (KM) strategy to maximize efficiency, ensure good governance of the programme and achieve greater impact at the different functional levels identified (portfolio level, general public level and policy-making level).

While specific needs related to the diverse outputs of the individual projects will be analyzed on a case-by-case basis, all CPs are evenly contributing to the various activities illustrated in this document. A standard text included in each Child Project document reflects this approach and is aimed at harmonizing individual contributions. The synergetic approach is also reflected in the allocation of evenly distributed budget under each CP that will be used to support KM activities, production of knowledge and data. CP 4.1 will cover for example the costs of developing the KM platform (including the project management tool), organizing activities and events and producing communications material. Each CP will use the dedicated allocation of funds to, for instance, feed the platform with processed data, produce specific information for the preparation of advocacy material, etc.
3. Why a KM strategy?

“Much of knowledge management is common sense, but not common practice. –Unknown

3.1 KM in the literature
Since the early 1990s there has been growing attention to the process of managing knowledge within organizations and businesses, mostly with the objective of improving performance and capitalizing on lessons learned. Pioneering professors Ikujiro Nonaka and Hirotaka Takeuchi, were among the first to investigate the benefits of Knowledge Management in organizations and popularize the concepts of “tacit” and “explicit” knowledge. In their 1991 groundbreaking article “The Knowledge-Creating Company”, they affirm that: “In an economy where the only certainty is uncertainty, the one sure source of lasting competitive advantage is knowledge”. Through the work of dedicated scholars, knowledge management (KM) has gained a consolidated reputation leading to its establishment as a recognized discipline. KM is now viewed as an organization's most valuable and strategic asset deserving to be treated accordingly.

There are many definitions of KM (see Box. 2) but it can be commonly described as the “systematic process to identify, capture, structure, value, leverage, and share an organization's intellectual assets to enhance its performance and competitiveness through a multidisciplinary approach”.

Box 3 Definitions

**Knowledge Management (KM):** the systematic processes, or range of practices, used by organizations to identify, capture, store, create, update, represent, and distribute knowledge for use, awareness and learning across and beyond the organization.

**Knowledge Management Systems (KMS):** any kind of IT system that stores and retrieves knowledge, improves collaboration, locates knowledge sources, mines repositories for hidden knowledge, captures and uses knowledge, or enhances the KM process.

**Knowledge Products and Services:** these refer to outputs such as databases, publications, visual material, maps (knowledge products) and outcomes such as awareness raising, information sharing, and capacity building (knowledge services).

Knowledge Assets: are the accumulated intellectual resources of an organization in the form of information, ideas, learning, understanding, memory, insights, cognitive and technical skills, and capabilities.

**Knowledge Sharing:** A subset of knowledge management encompassing the exchange of knowledge (information, skills, experiences, or expertise) within and across organizations. Although it can be one- directional, knowledge sharing in most cases is a two-way or multilateral exchange in which the parties learn from each other. Knowledge sharing is more than mere communication because much knowledge in organizations is hard to articulate. In development work, some knowledge sharing has a regional aspect. For example, South-South knowledge sharing refers to exchanges among partners and peers across developing countries.

KM is based on two critical activities:

1. the capture and documentation of explicit (technical and codified information) and tacit knowledge (intangible assets intended as human and intellectual capital);

2. their dissemination amongst the intended audiences and stakeholders.

There are two key challenges: knowledge is difficult to assemble, and it is difficult to encourage its use. Many managers see it as a time-consuming distraction from their core role. However, proper knowledge management can reduce risks and increase efficiency through the re-use of proven approaches and avoidance of known pitfalls. It can also produce a virtuous circle as individuals and teams see their contributions recognised and re-used, thus encouraging further participation in the process. Accurate knowledge management is a powerful enabler of organizational learning and an indispensable ally for strengthening the science-policy interface. Writing a report or producing scientific data is only a part of the broader effort to promote environmental sustainability, because without effective sharing of information (in terms of language, tools, channels, etc) and dialogue among all stakeholders involved, the impact of the knowledge produced remains very limited. Considerable progress in raising awareness and improving scientific dissemination has been achieved in recent decades, but the urgency posed by challenges worldwide calls for accelerated and renewed efforts to raise the awareness of policy makers and the public at large about the measures needed to achieve sustainable development and the protection of natural resources.

3.2 KM under GEF programmatic approaches

The policy recommendations emanating from the GEF-7 replenishment\textsuperscript{13} clearly refer to knowledge as a “critical asset of the GEF Partnership” and commend “the steps taken to build the GEF’s knowledge management systems and practices in GEF-6, as well as the increasing attention to learning and knowledge exchange in GEF projects and programs, notably the integrated approach pilot programs, and in outreach to recipient countries”. The call for more investments in knowledge management systems and practices also stems from recent GEF OPS (Overall Performance Studies) which have found that “the relevance of knowledge management to the GEF mandate has been increasingly recognized, and efforts to improve knowledge management in the partnership have been made on several fronts”. The GEF2020 Strategy emphasizes “strategically generating knowledge” as a priority. In 2014, the policy recommendations in the GEF-6 Replenishment Document similarly emphasized “the importance of developing a knowledge management (KM) system that aims to improve the GEF partnership’s ability to learn by doing and thereby enhance its impact over time”.\textsuperscript{14}

At the same time, the GEF-7 Programming Directions commend programmatic approaches (see Box 3) to tackle environmental degradation, making the case for better performance and higher impact of projects within a program. It is noted that “Child projects generally performed better than stand-alone projects on all rating dimensions, especially on execution quality, sustainability and M&E design. Child projects have also improved in design and are now better linked to the overall program in terms of objectives, result based

\textsuperscript{13} Ref. GEF-7 Replenishment, Policy Recommendations, Fourth Meeting for the Seventh Replenishment of the GEF Trust Fund, GEF/R.7/18, p.9, www.thegef.org/council-meeting-documents/gef-7-policy-recommendations

management and M&E.” In addition, OPS6 reports that “multi-focal area projects are better at achieving global environmental and socio-economic outcomes at completion compared to single-focal area projects.” A recent IEO brief further noted that country stakeholders cite “improved knowledge sharing and synergies with other GEF projects among the incentives for joining a program.”

Managing knowledge holistically within programs is a key undertaking, posing additional challenges due to the extra complexity and number of partners and stakeholders involved. The STAP notes that “as the GEF moves further towards integrated approaches, multi-focal projects and impact programs, it is increasingly important to facilitate acquisition of formal and tacit knowledge, organize knowledge assets from complex situations and make them available to inform future investments. The Integrated Approach Pilot (IAP) programs and Impact Programs impose greater needs for connections between ‘child’ projects and program objectives. KM is the obvious means to tie these connections together, to collect evidence-based learning, and to achieve sustained impact that deliver benefits far into the future.”

This emphasis from the GEF on both integrated knowledge management systems and holistic multi-focal area programmes, clearly sets the ground for a purposeful, concrete and action-orientated KM strategy for the MedProgramme. During its execution, the MedPCU will make sure that actions are closely aligned with GEF KM-related guidelines.

**Box 4 GEF Programmatic approaches**

Programmatic approaches, formalized in 2008, are particularly relevant to the Global Environment Facility (GEF), given the long-term nature of the environmental problems the GEF addresses. The GEF-7 Replenishment Programming Directions reafﬁrms this approach noting that “more complex programs and sets of child projects will tend to offer more entries for development links due to multi-sectoral approach, multi-stakeholder engagements and platforms, and potential for delivering socio-economic co-beneﬁts, along with enhancing the sustainability of the associated investments.”

---

15 Ref. GEF-7 Replenishment, Programming Directions, Fourth Meeting for the Seventh Replenishment of the GEF Trust Fund, GEF/R.7/19, p.6, https://www.thegef.org/council-meeting-documents/gef-7-programming-directions
16 Ibid
18 “Programs have been part of the GEF since its establishment. [...] In 2008, the Council endorsed the objectives and principles for programmatic approaches. For the first time, detailed procedures for designing pro- grams were approved, including the introduction of the program framework document (PFD). This resulted in an increase in the submission of programs to the Council and a change in their nature from phased to clustered ones. Importantly, a stimulus to program ownership was introduced by deﬁning programs as “a more strategic level interaction with the GEF” for countries. [...] Until GEF-5, Council discussions about programs centered more on administrative than technical matters. This changed in 2014, when the Council approved a re-vised modality based on program scope: (1) thematic—the program addresses an emerging issue (e.g., a driver of environmental degradation), and (2) geographic—the program focuses on a particular geography. In GEF-6, the GEF introduced the IAPs, which focus on drivers of environmental degradation through supporting broad stakeholder coalitions and scalable activities.” IEO BRIEF, Evaluation of Programmatic Approaches in the GEF, January 2018
22 At the time of the PPG phase (June-September 2018) final GEF guidelines on KM were not yet available. However, due consideration of provisions contained in the GEF Knowledge Management Approach Paper (2015, https://www.thegef.org/sites/default/files/council-meeting-documents/EN_GEF.C.48.07.Rev_.01_KM_Approach_Paper.pdf) and other relevant documents was taken into account when preparing this strategy.
4. Getting there: a modular architecture

"Knowledge is the new capital, but it’s worthless unless it’s accessible, communicated, and enhanced."

– Hamilton Beazley

In order to achieve the objectives of the KM strategy, three interconnected functional levels have been identified to structure actions, activities and tools:

1. at the PORTFOLIO LEVEL;
2. at the GENERAL PUBLIC LEVEL;
3. at the POLICY and DECISION-MAKING LEVEL

Each level is articulated along different objectives. Activities and tools contribute to one or more KM levels and to the two Components of Child Project 4.1 (see Table 3, page 32). They are presented associated with objectives (such as “Monitoring progress towards impact”), but in most cases they are meant to respond to the needs of more than one KM level.

4.1 Portfolio Level

The work of project managers and executing partners is supported through provision of project management tools, monitoring frameworks, trainings and knowledge exchanges. A series of IT-based solutions and knowledge-mining and -sharing techniques are used to capture codified information as well as intangible assets.

4.1.1 Supporting efficient project management

4.1.1.1 Project Management Tool

A multilingual online project management tool (integrated in the KM platform) can respond to the need of supporting efficient project (and programme) management by facilitating communication and information exchange among key actors of the Programme; promote knowledge sharing and peer-to-peer learning; facilitate tracking and monitoring of progress; and meet reporting requirements. A review of options currently available on the market (such as Asana, Freedcamp, Wrike, Slack, Microsoft Project, Basecamp, among others) has been carried out in the preparatory phase of the MedProgramme with a view to inform the selection of the most suitable tool to serve the needs of the portfolio. The final selection and adoption of the tool will occur during the inception phase of CP 4.1.

This decision-support system employs effective data-mining techniques and can be customized to suit the programme’s needs, and project managers (and designated project collaborators) will receive specific training on its use and adoption to ensure portfolio-wide consonance.

Key features for such a tool include (but are not limited to): automated reporting, shared calendars, live editing/collaboration on document development, workflow and task monitoring, Gantt–Chart, time tracking, file management and cloud repository, encrypted security, back-ups, integration with email and other products, mobile apps, and role-based access control and discussion boards.

The majority of respondents to the online survey on projects needs welcomed the idea of utilizing a PMT (and benefitting from ad hoc training). Previous experience from MedPartnership showed little use of a similar tool, however since then these online tools have greatly improved their features and levels of customization, and have been adopted widely to manage complex, multi-partner and multi-lingual projects.

4.1.2 Sharing knowledge and building capacity

One of the objectives of the MedProgramme is to improve the capacity of key regional stakeholders and build socio-economic resilience of impacted communities. To this end, a series of knowledge exchanges will take place at different levels taking inspiration and practical lessons learned from the GEF Partnership (reflecting the wealth of experience and examples from projects and programs around the world) and other relevant Organizations involved. A milestone activity in this sense is represented by the series of MedProgramme Annual Stocktaking Meetings (see next section).

---

23 Project management tools (PMT) are aids to assist an individual or team to effectively organize work and manage projects and tasks. PMTs can either be desktop software, web-based and as a mobile app. Most of the tools are web-based only with a few providing also desktop and mobile based versions, regardless of the kind of version all the work is updated instantly across all devices and accounts.
4.1.2.1 Knowledge Exchanges
At the portfolio level, the MedPCU will capacitate Child Project teams with knowledge and training that can help them to deliver better project results and achieve greater impact. The identification of topics and modalities of exchange (face-to-face, virtual meetings, Communities of Practice, Expert visits, Study Tours, manuals, among others) will be defined at the beginning of the Programme implementation. Preliminary topics could include:

1. Gender mainstreaming and stakeholders’ engagement;
2. Scientific communication: bridging the gap between scientists/technical practitioners and media specialists;
3. Lessons learned from the MedPartnership and the ClimVar and ICZM projects.

It is expected that these knowledge exchanges will further empower project stakeholders, enhance cooperation, strengthen the institutions they represent and ultimately influence policies and norms for better management of natural resources in coastal areas.

Additionally, Child Projects will participate in learning exchanges by twinning with other relevant GEF IW projects as facilitated by the GEF IW:LEARN Project (see more at page 44).

Moreover, the MedPCU will support specific capacity building activities foreseen by each Child Project by taking stock and amplifying results through the programme-wide outreach.

4.1.3 Monitoring progress towards impact

4.1.3.1 Annual Stocktaking Meetings (ASM)
The Annual Stocktaking Meetings (ASM) are one of the milestone activities of the MedProgramme. They are major regional events aiming to establish synergistic interactions among Child Projects and with other relevant initiatives and stakeholders, including with all other Mediterranean countries not participating in the MedProgramme.

ASMs hold a two-fold objective: 1) provide a forum for peer-to-peer learning among the Programme portfolio, and 2) catalyze regional and global attention on the progress made towards impact in the entire Mediterranean region.

The ASMs will be an occasion for face-to-face knowledge exchanges, south-south and north-south learning, and promotion of the broader adoption of MedProgramme approaches and solutions. Project managers, stakeholders and beneficiaries will have the opportunity to learn from each other, tap into respective tacit knowledge, and at the same time benefit from experiences and expertise generated by GEF and non-GEF projects and other relevant experts in different disciplines with diverse backgrounds. Moreover, Child Projects will have the chance to showcase their implementation advancement, discuss problems encountered, and engage with a broad audience of peers and stakeholders. The participation of regional and global media

---

25 The importance of, and need for stocktaking meetings emerged during the execution of the Strategic Partnership for the Danube and Black Sea Basin, the first GEF experiment in multi-project programs.
will raise public awareness across the Mediterranean countries and beyond. These knowledge exchanges will further enhance cooperation, strengthen the institutions they represent and ultimately influence policies and norms for better management of natural resources in coastal areas. The meetings will involve: all Child Projects and Governments of the participating countries, the MedProgramme’s implementing and executing agencies, the GEF Secretariat and Independent Office of Evaluation (IOE), Convention Secretariats, the UN Environment Global Program of Action (GPA), as well as major regional and global NGOs, representatives of those Mediterranean countries not participating in the MedProgramme; bilateral and multi-lateral donors, IFIs, the UfM, other regional intergovernmental organizations (OSS, etc.), and major private sector coastal area actors, water users, tourism associations and the shipping industry. Representatives of faith-based leaders, women’s organizations, youth organizations, fashion/art/sport testimonials, media specialists, among other relevant groups will also be invited to participate in these events, following a dedicated stakeholders’ analysis.

All project partners are expected to attend, and meaningfully participate in, the ASMs. They will be organized by the MedPCU in cooperation with all CPs and country representatives and will take place on a rotation basis in different project countries.

The ASM design, objectives and architecture will be defined during the first year of MedProgramme operation and approved at the CP 4.1 Steering Committee level. The first ASM will be held during the second year of MedProgramme operation.

### 4.1.3.2 Data visualization

Data visualization tools effectively support monitoring and reporting through easy visualization of selected data thus taking stock of progress. The table below illustrates possible types of visualization for geospatial and other types of data.

<table>
<thead>
<tr>
<th>GEOSPATIAL DATA</th>
<th>Type of data example</th>
<th>Visual example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pin, symbol</strong> <em>(with or without color or icon coding)</em></td>
<td>Coastal contamination hotspots, industrial wastewater treatment plants, etc.</td>
<td><img src="image1.png" alt="Visual example" /></td>
</tr>
<tr>
<td><strong>Polygon</strong> <em>(with or without color coding, with or without color following a scale)</em></td>
<td>Number of water system clients connected to modern wastewater facilities, Coastal contamination hotspots, Concentration of mercury in coastal waters, Landscape and seascape under improved management, etc.</td>
<td><img src="image2.png" alt="Visual example" /></td>
</tr>
<tr>
<td><strong>Proportional symbol</strong> <em>(color and/or size follow a scale)</em></td>
<td>Amounts of POPs disposed of/recycled on-site, Amounts of Mercury disposed of recycled on-site, Volume of industrial wastewater receiving secondary treatment, Volume of treated industrial wastewater reused, etc.</td>
<td><img src="image3.png" alt="Visual example" /></td>
</tr>
</tbody>
</table>
### GEOSPATIAL DATA

<table>
<thead>
<tr>
<th>Type of visualization</th>
<th>Type of data example</th>
<th>Visual example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heatmap</td>
<td>Concentration of POPs in coastal waters, etc.</td>
<td><img src="image1.png" alt="Heatmap Image" /></td>
</tr>
<tr>
<td>Choropleth maps</td>
<td>Countries implementing comprehensive Integrated Coastal Zone Management, Countries implementing sustainable consumption and production (SCP) approaches, Countries having completed inventories of submarine groundwater discharges, etc.</td>
<td><img src="image2.png" alt="Choropleth Map" /></td>
</tr>
</tbody>
</table>

### OTHER TYPES OF DATA

<table>
<thead>
<tr>
<th>Type of visualization</th>
<th>Type of data example</th>
<th>Visual example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Animated gauge</td>
<td>Real-time progress towards target of 3,250 tonnes reduction in POPs contamination, progress towards target of 50 tonnes reduction in mercury contamination, etc.</td>
<td><img src="image3.png" alt="Animated Gauge" /></td>
</tr>
<tr>
<td>Pie chart</td>
<td>Training distribution by type of training and by gender, etc.</td>
<td><img src="image4.png" alt="Pie Chart" /></td>
</tr>
</tbody>
</table>

Note: For each geospatial visualization above, more information could be displayed in overlays (which appear when hovering the mouse).
4.1.3.3 Measuring Knowledge Management impact

“Everything that can be counted does not necessarily count; everything that counts cannot necessarily be counted.” –Albert Einstein

Unlike other activities that can be justified in terms of explicit and measurable monetary savings, the added value of knowledge management is more difficult to quantify. Knowledge management benefits are both far reaching and hard to measure as they relate primarily to preventing the waste of money, time and human resources. It is difficult to quantify the expense – in terms of time and money – of finding the right information or reproducing knowledge that already exists, or of using obsolete rather than up-to-date information. The prevention of errors and the savings that are often achieved through better use and reuse of existing knowledge are practically invisible in accounting terms\(^\text{27}\).

Nevertheless, it is important to assess the performance of KM efforts and measure the impact of the KM strategy. Measurement, benchmarking and incentives are essential to accelerate the learning process and to drive cultural change. When distilling recommendations to improve the systematic treatment of the need for KM, the STAP recommends that “knowledge management progress indicators should be included in the GEF Results-Based Management system\(^\text{28}\).”

A menu of indicators (both quantitative and qualitative) will be considered by the MedPCU in order to monitor knowledge-related activities (Table 5). Once indicators are discussed and approved during the inception phase of the MedProgramme, related targets can be developed to measure the achievement of the objectives.

<table>
<thead>
<tr>
<th>Table 6 Possible KM Indicators</th>

## 4. Getting there: a modular architecture

### What to measure

<table>
<thead>
<tr>
<th>What to measure</th>
<th>Indicators</th>
<th>Means of verification</th>
</tr>
</thead>
<tbody>
<tr>
<td>How often are public users IV) accessing the MedProgramme portal, and V) accessing the knowledge assets?</td>
<td>• Number of visits, • Average time spent • Number of downloads • Pages visited • Number of recipients opening the newsletter • Ease of finding knowledge resources on the portal from 1 to 5, etc.</td>
<td>Usage data will be provided by the MedProgramme portal analytics. A feedback form can also be available at all time on the portal.</td>
</tr>
<tr>
<td>Is MedProgramme producing quality knowledge assets?</td>
<td>• Level of satisfaction of stakeholders with knowledge asset • Are stakeholders using knowledge assets in their work</td>
<td>This can be measured through a stakeholder survey.</td>
</tr>
<tr>
<td>Is MedProgramme contributing to the GEF knowledge base?</td>
<td>• Knowledge assets shared on other GEF platforms (IW:LEARN and others)</td>
<td>This will be monitored by the MedPCU.</td>
</tr>
<tr>
<td>Is MedProgramme building the capacity of key regional stakeholders?</td>
<td>• Key regional stakeholders have been identified • Number of knowledge exchange activities implemented • Number of participants at the Annual Stocktaking meetings</td>
<td>This will be monitored by the MedPCU.</td>
</tr>
<tr>
<td>Is MedProgramme participating / contributing to global and regional campaigns, events and processes?</td>
<td>• Number of regional and global events with MedProgramme participation (as presenter) • Number of #MedProgramme mentions on SDG social media channels</td>
<td>This will be monitored by the MedPCU.</td>
</tr>
<tr>
<td>Is MedProgramme getting the attention of the media?</td>
<td>• Number of media hits in target languages / countries • Number of media hits in first tier media outlet • Number of Op-eds placed, etc.</td>
<td>This can be monitored by a media agency for a fee or with free tools such as Google Alerts.</td>
</tr>
<tr>
<td>Are Parties to the Barcelona, Stockholm, Minamata, and Basel Conventions VI) aware of the MedProgramme outputs / outcomes? VII) using the MedProgrammes outputs?</td>
<td>Number of briefing organized with Parties to the Barcelona Convention Number of countries attending the briefing Number of countries using MedProgramme outputs</td>
<td>This will be monitored by the MedPCU and country representatives can be surveyed through face-to-face interviews, etc.</td>
</tr>
</tbody>
</table>

### 4.2 General Public Level

Civil society, media, and representatives of non-scientific community are informed about MedProgramme’s results and engaged in knowledge sharing activities both as brokers and beneficiaries.

### 4.2.1 Communicating progress and results

The KM strategy foresees a large component on communications and outreach aimed at ensuring that results are properly shared with the intended audiences to maximize, replicate and scale up best practices and lessons learned.

A number of traditional communications activities (such as newsletters, brochures, etc.) will be blended with innovative and creative approaches (graphic novels, documentaries, podcasts, etc.) to ensure visibility of the Programme.

#### 4.2.1.1 Knowledge Management Platform

The engine of the KM strategy is enshrined in a powerful web-based knowledge hub comprised of a
data and information management system (with both public and restricted access) and a combination of visualization tools to serve the portfolio’s needs.

The platform will serve as central repository of all the data generated by the Child Projects and will be designed with a view to the following strategic knowledge management objectives:

- Facilitate information sharing and promotion of the Programme achievements among the partners and the regional stakeholders.

- Reflect the indicators of all Child Projects in the establishment of the relevant tools and frameworks, and seek coherence with efforts underway in the GEF’s Chemicals and Waste Focal Area to create a platform to assist countries in meeting the reporting requirements of the Stockholm and Basel Conventions.

- Support policy development through its data collection and management tools.

- Strengthen the science-policy interface, incorporating relevant data already generated by the countries, with the clear understanding that no data would be disseminated without the permission of its owner.

- In the long term, become a tool of the Contracting Parties of the Barcelona Convention.

- Assist countries in meeting their IMAP reporting requirements.

- Ensure that the highly valuable legacy of the MedPartnership, which produced a substantial volume of knowledge and information as well as a number of tools and guidelines, lessons, and experiences, is carefully preserved and easily accessible, including translations of key documents.

Such an integrated platform should host: 1) a project management tool; 2) a public/outward-facing portal, including sub-webpages for each CP; 3) visualization tool(s) to display a digitalized representation of data through GIS and other suitable means; and 4) a database for raw/primary data.

1. The project management tool was described previously (page 33)

2. The outward-facing MedProgramme portal will be populated with key information showcasing progress towards impact and the contribution of the MedProgramme to global and regional environmental goals. The portal will serve as a gateway for information related to international waters, coastal zones, biodiversity and climate resilience in the Mediterranean sea basin, bringing together information from GEF and non-GEF projects (for example results from the MedPartnership project will be made available and possibly re-packaged in new material) for broad dissemination and cross-fertilization (several platforms identified in the Baseline can be cross-referenced from the MedProgramme platform to reach out to vaster audience and stakeholders). It will closely dialogue with the GEF’s new portal (corporate database for projects, reports, and documentation) and the IW:LEARN website. The MedProgramme portal will feature a highly user-friendly interface including effective search functions, filters (such as drop-down menus) and analytical capabilities. Each Child Project will have dedicated sub-pages about their specific activities. CPs are expected to provide regular information (in different multimedia formats) to generate content for their respective project sub-pages and the overall programme portal. The MedPCU will be responsible for curating the information provided and packaging them for the intended audiences.
3. Visualization tools\textsuperscript{39} will be used to display spatial and non-spatial data (be they quantitative or qualitative) generated by the projects. Data need to be stored and mined in a way that makes them readily available not only to track progress but also to support decision making by the different stakeholders. GIS (geographic information system)\textsuperscript{30} will be largely used as well as textual information, photos, story maps, pie charts, graph charts, infographics, map dashboards, trend line charts, among others (see examples in Table 5). Users can build a query based on specific criteria such as geographic area, data layer or specific indicators. Alternatively, users can simply browse for information using the icons provided. There are a number of visualization software tools available both as open source and commercial options. A number of products (with license or open access) could be suitable for integration in the MedProgramme knowledge platform, such as Esri ArcMap and ArcGis, Geonode, QGIS, MapX\textsuperscript{31} and Google Earth Outreach\textsuperscript{32}. The final selection will be made during the inception phase.

4. Raw/primary data will be stored in a database with flexible restricted/public access. A shared data model/protocol should be agreed at the beginning of the Programme to ensure that projects will compile relevant data with a standardized approach and enable a harmonized data entry system (the INSPIRE directive\textsuperscript{33} could be taken as reference to harmonize the process). Issues related to open data, ownership, quality and review of data will be addressed in this exercise; a mapping of voluntary standards can help to evaluate feasible options. Contributors of data are all stakeholders of the MedProgramme, including the Executing Partners. Child Projects are responsible for producing their own data.

4.2.1.2 MedProgramme identity

In terms of visibility, the MedProgramme will be presented in a holistic and coherent way through the development of clear vision statement and positioning, visual identity, logo design, etc. showing consistency and integration across the portfolio. At the same time, each Child Project will be granted individual identities within the overall MedProgramme-branding in order to promote specific activities and benefit from ad hoc services. This will entail the design of consistent logos for each CP, creation of sub-websites within the Programme platform, organization of tailor-made trainings, preparation of specific publications, social media services, among others.

The MedPCU will develop a proposal\textsuperscript{34} in close consultation with project teams and, once adopted at the Steering Committee level, Child Projects are expected to use it consistently.

\textsuperscript{29} Data visualization is the presentation of data in a pictorial or graphical format, and a data visualization tool is the software that generates this presentation. Data visualization provides users with intuitive means to interactively explore and analyse data, enabling them to effectively identify interesting patterns, infer correlations and causalities, and supports sense-making activities.

\textsuperscript{30} The information about location associated with observation and statistical analysis is called geographic information.

\textsuperscript{31} MapX was developed by UN Environment, the World Bank and the Global Resource Information Database (GRID-Geneva) to capitalize on the use of new digital technologies and cloud computing in the sustainable management of natural resources. More info: www.mapx.org

\textsuperscript{32} A recent partnership has been established between UN Environment and Google.

\textsuperscript{33} The INSPIRE Directive aims to create a European Union spatial data infrastructure for the purposes of EU environmental policies and policies or activities which may have an impact on the environment. This European Spatial Data Infrastructure will enable the sharing of environmental spatial information among public sector organisations, facilitate public access to spatial information across Europe and assist in policy-making across boundaries. INSPIRE is based on the infrastructures for spatial information established and operated by the Member States of the European Union. The Directive addresses 34 spatial data themes needed for environmental applications. The Directive came into force on 15 May 2007 and will be implemented in various stages, with full implementation required by 2021. More info: https://inspire.ec.europa.eu

\textsuperscript{34} In line with both UN Environment and GEF policies on branding and use of logos.
4.2.1.3 Newsletters (Med Bulletin)
Periodic MedProgramme Bulletins will be published (every six months or on a quarterly basis) to showcase progress of the Programme as a whole and of individual Child Projects, including highlights of results, success stories and project events, and relevant global, regional and national relevant meetings and events. It will be one of the primary tools for tracking achievement of targets and milestones for all Child Projects, based upon the corresponding results frameworks. Bulletins will feature a “journalistic” style making the content appealing for a wide range of audiences. Therefore, all CPs are expected to contribute to these Bulletins with different types of inputs in order to document their activities and progress, such as high-quality pictures, articles, statistics, quotes, interviews, footage, among others.

4.2.1.4 Storytelling for advocacy
A number of traditional storytelling instruments will be blended with innovative and creative approaches to increase dissemination and advocacy efforts. Particular emphasis will be given to the preparation of high-quality short movies, animations and documentaries, graphic novels\textsuperscript{35}, documentaries, podcasts\textsuperscript{36}/radio programmes, infographics, art exhibitions, digital interactive stories/articles/interviews, professional photos, microblogging, e-books, art exhibits, among others. The MedPCU will collect different multimedia material from the CPs necessary to prepare these products. Translations of key communications outputs will be carried out in English, French and Arabic to ensure ample dissemination in the participating countries. Specific translations in other national languages will be sought pending budget constraints and upon due consideration of stakeholders’ needs.

4.2.1.5 Social Media
Facebook, Instagram, YouTube and Twitter are four social media tools suggested for use by the MedProgramme. Development of timely and appropriate content and material to populate these channels is indispensable to achieve the desired impact. CPs will be prompted to contribute with relevant and ad-hoc information, pictures, statistics and other data to enrich the social media campaign. The use of hashtags will be coordinated with the GEF IAs and EAs and project and country representatives of the Programme in support also of other related initiatives and campaigns. The registration on the above-mentioned channels (or a selection of them) will take place at the beginning of the Programme and content population will start as soon as data and information from the projects becomes available.

4.2.1.6 Participation to global campaigns, events and processes
Experiences and lessons learned from the MedProgramme will be of relevance for a number of global processes shaping policies related to the sustainable management of natural resources in coastal areas. In turn, global processes are important for the MedProgramme to align with national, regional and global priorities and be receptive to new “waves” (policies, socio-economic trends, tech advances, etc). MedProgramme activities in this sense will build on existing successful campaigns, for example the “ICZM Mediterranean awareness-raising Strategy (MARS)”. Contribution to these events will take different forms, ranging from physical attendance, production of specific products, content and multimedia material to be packaged in suitable products, among others. Examples of processes and events that could be relevant for the MedProgramme include the Agenda 2030 and SDGs conferences, the United Nations Environment Assembly (UNEA), Mediterranean-wide policy-dialogues, the UN Environment campaigns against chemical and plastic pollution, the EU Development Days.

\textsuperscript{35} Graphic novel or graphic journalism” is an increasingly popular literary genre that uses comics and poignant texts to explain complex matters. It is a compelling way of storytelling for scientific dissemination.

\textsuperscript{36} A mix of radio and audiobooks, podcasts are a very incisive and entertaining way of sending messages across and inform and spark debate on pressing issues. They are easy to share and can reach a vast and varied audience.
and other key gatherings at the EU level, International Days (such as Coast Day, Environment Day, World Water Day, Health Day, etc), among others.

4.2.1.7 Engagement with media and testimonials
The MedPCU will reach out to a different number of media outlets and journalists with a view to establish long-lasting collaborations. To this end, CPs will be asked to liaise with national and local media of the project countries (for instance, by providing the MedPCU with a list of relevant contacts). A series of direct interactions with communications specialists, media experts and social media influencers is foreseen throughout the duration of the Programme to increase mutual understanding and flow of information. The MedPCU will also reach out to renowned personalities from different realms (such as art, sports, entertainment or fashion) to invite them to serve as ambassadors for the Programme and raise awareness about the main environmental challenges (and solutions) in the coastal areas of the Mediterranean. CPs will be prompted to suggest names, and facilitate contacts when possible, of suitable and potential “goodwill ambassadors” of relevance in the region.

4.2.1.8 Launching/Closing events of the MedProgramme
The design and practical details of these events will be planned during the inception phase of the MedProgramme. Considering the staggered initiation timeframes of the different Child Projects, a launching event of the MedProgramme could be organized in the form of a press conference to coincide with the kick-off of the Support Child Project 4.1. Basic communications material about the objectives of the MedProgramme (such as visual identity, slogan, mission statement, description of Child Projects, informative brochure, short promo video, basic online pages, etc) should be prepared prior to the launching event. Participation to these events will not necessarily be open to the large public, however the information and messages emanating by these two occurrences will be relevant for a general audience as well.

4.2.2 Forging and nurturing Partnerships

*If you want to go fast, go alone. If you want to go far, go together.* –African Proverb

Opportunities to enlarge the existing partnership of the MedProgramme should not only be welcomed, but actively sought. By reaching out to different stakeholders – individuals, organizations or companies – and engaging them directly in selected MedProgramme activities, a series of distinct advantages will be produced. These include:

- Contributing to transformational change: groups that are likely to evade the radar of “usual suspects” mapping (intended as classic stakeholders for environmental projects) will be intentionally targeted, moving away from the old-fashioned top-down view of passive beneficiaries of knowledge to a new vision in which conscious citizens are regarded as source of knowledge and potential allies in the strive against environmental degradation. For example, a collaboration with Faith-Based Organizations\(^\text{37}\) to prepare a workshop or joint statements disseminated through their networks would tremendously increase the chances to inform and influence a large portion of general public that is not reached by traditional channels. Another possibility is a partnership with a fashion magazine to sensitize readers about sustainable business in coastal areas. Another possibility is a partnership with a fashion magazine to sensitize readers about sustainable business in coastal areas.

\(^{37}\text{Faith-Based Organizations could be a very important stakeholder group to engage in environmental decision-making. “Religion plays a significant role in the understanding and shaping of attitudes, opinions and behaviours including for management and use of the environment and natural resources”. UN Environment Foresight Brief 008, April 2018.}\)
• Facilitating a more rapid achievement of the Programme results: for example, a partnership with tourism institutions in the different participating countries could accelerate the adoption of more sustainable touristic habits to reduce pollution load into water bodies and increase the acceptance and reuse of treated freshwater for human consumption.

• Raising the profile of the GEF investments in the Mediterranean and of the countries and partners participating to the effort. A partnership with National Geographic for instance, or with national TVs and radio stations, could enhance the dissemination of knowledge and results generated by the MedProgramme as well as by related initiatives and policy-frameworks, like the Barcelona Convention.

• Further stimulating a sense of ownership and contributing to the sustainability of Programme results: making tight connections for example with the Bibliotheca Alexandrina to host a permanent or temporary exhibition about the MedProgramme, which could then travel around museums of the entire Mediterranean basin (starting with participating countries), and thus ensure that the legacy of the MedProgramme will continue to inspire people even after the programme closure.

• Providing additional means to further expand Programme activities: by adding ad hoc co-financing (cash or in-kind) to produce, for example, through a publication or a short movie for the general public, the MedProgramme could gain positive returns in terms of resources and reputation. Bringing together renown artists from project countries and the private sector to jointly produce a graphic novel on the MedProgramme, for instance, could be rewarding in many regards.

The MedProgramme holds the possibility to create a fertile hub for different partners to come together and share experiences and solutions to common challenges related to environmental degradation and pollution of freshwater/marine waters in the region. The private sector is a prime stakeholder in this effort and should be always engaged to cross-fertilize the MedProgramme’s interventions. As emphasized in the GEF 2020 strategy: “Coordination failures abound in environmental management, in part because of the prevalence of ‘tragedy of the commons’ issues. Moreover, the complexity of environmental challenges requires that actions be taken simultaneously by many different stakeholders to be effective; [...] Partnerships with the private sector, civil society, research groups, and indigenous and local communities are vital in this regard.”

The importance of tightening relations with the private sector is again stressed in the GEF 2020 strategy: “The IAPs (Integrated Approach Pilots) will give special attention to engaging the private sector and improving evidence-based design and implementation to enhance learning and the effectiveness of the IAP interventions.”

Furthermore, in strengthening collaboration with a vast and diverse, yet relevant, groups of stakeholders, the MedProgramme will contribute to the vision encapsulated in the Sustainable Development Goal 17: “A successful sustainable development agenda requires partnerships between governments, the private sector and civil society. These inclusive partnerships built upon principles and values, a shared vision, and shared goals that place people and the planet at the centre, are needed at the global, regional, national and local level.”

---

4.3 Policy and Decision-Making Level

The Contracting Parties of the Barcelona Convention, relevant decision makers in the region, technical practitioners as well as GEF Implementing and Executing Agencies are supported in their work through contributions to relevant regional policy processes and related GEF initiatives (particularly through the IW:LEARN project).

4.3.1 Strengthening the Science-Policy Interface (SPI) and Influencing Decision-Making

4.3.1.1 Replication Atlases
A number of highly informative National Replication Atlases, translated in relevant languages, will be produced to stimulate replication of successful practices demonstrated by the Programme and encourage regional and global dialogue. Broader adoption and replication of the successful policies, practices and technologies implemented under the Programme will be promoted through these means, highlighting areas and situations where replication of the Programme’s demonstrations should preferentially occur.

Relevant results of Child Projects will be featured in the Atlases and the MedPCU will inform about the participatory process to collect and present the inputs.

4.3.1.2 Agenda 2030 and the Sustainable Development Goals
The MedProgramme will produce regional environmental benefits contributing to the Sustainable Development Goals, in particular the goals on responsible consumption and production (SDG 12), climate action (SDG 13), life below water (SDG 14), and life on land (SDG 15), which reflect to a large extent the GEF’s core mission. By fighting environmental degradation in coastal areas and improving livelihoods, the MedProgramme is supporting beneficiary countries, and all populations living in the Mediterranean basin, to increase their capacity to build climate resilience, reduce pollution from nutrients and persistent toxic substances (POPs and Mercury), sustainably manage coastal freshwater and marine resources, protect biodiversity, and restore coastal ecosystems. Moreover, its focus on improving freshwater quality and quantity will directly contribute to SDG 6 on water and sanitation, while a dedicated gender strategy will ensure compliance with the SDG 5 on gender equality and women’s empowerment.

4.3.1.3 Supporting countries to implement IMAP
Since the 2005 Mediterranean TDA, the situation in the Mediterranean in terms of transboundary issues in the marine and coastal areas has evolved. In terms of monitoring, the adoption in 2008 of the EU Marine Strategic Framework Directive (MSFD) led to the development in EU countries of national monitoring plans based on a set of detailed common criteria and indicators. UN Environment/MAP initiated the Ecosystem Approach in 2008, which led to the adoption of 11 Ecological Objectives, 61 indicators and definition of GES and targets in 2012 at the COP17of the Barcelona Convention. This led to the Integrated Monitoring and Assessment Programme (IMAP) for the Mediterranean, which was adopted in 2016 at the Barcelona Convention COP19. IMAP is the best available common set of tools for informing the science-policy interface (SPI) which is critical to achieve meaningful progress on stress reduction. Now the challenge is for countries, especially the non-EU countries, to redesign their national monitoring programs in line with IMAP and the 23 common indicators covering also the areas beyond national jurisdiction. Regarding monitoring of pollution, countries will build upon their MED POL monitoring program and database that has been in existence since 1999, with agreed parameters and stations in key hotspots and coastal areas. However, very few data exist for the majority of the common indicators, other than some contaminants, nutrients and chlorophyll data, particularly in the GEF eligible countries of the Mediterranean.
4.3.2 Contributing to the GEF knowledge base

The results produced by the MedProgramme (hot spots of coastal/marine pollution and habitat degradation, implementing ICZM and nexus planning, conjunctive surface water and groundwater management, protecting coastal groundwater-related ecosystems and coastal/marine biodiversity) will substantially contribute to the GEF knowledge base and to relevant GEF process, events and activities involving the four focal areas of International Waters, Chemicals and Waste, Biodiversity, Climate Change. Technical practitioners and scientists are also addressed as direct consumers of technical reports and assessments, and they are key agents to strengthen the science-policy interface.

4.3.2.1 Technical reports and scientific publications

The MedPCU will ensure that relevant scientific reports and scientific peer-reviewed publications are prepared by the various CPs providing technical information about the achievements of the Programme.

4.3.2.2 Synergies with the GEF IW:LEARN and LME:LEARN Projects

The MedProgramme will closely collaborate with the GEF International Waters Learning and Resource Exchange Network (IW:LEARN) Project\(^{40}\) to facilitate uptake of lessons learned and knowledge exchange from/to the MedProgramme portfolio.

Cooperation in the following activities will be particularly addressed:

- Participation to the GEF International Waters Conferences (landmark biannual events of the IW portfolio). The first MedProgramme contribution is expected for the 10th edition of the IWC in 2020.
- Production of Experience Notes (short case studies) produced by Child Projects to showcase worthy results and disseminated through IW:LEARN channels and the MedProgramme KM platform. The format of Experience Notes is standard (https://iwlearn.net/documents/experience-notes)
- Participation to IW:LEARN Twinnings with other GEF relevant projects and programs.
- Contribution to IW:LEARN.net with specific content (i.e. data visualization).
- Participation to social media, news, events, etc.
- Participation to GEF Communities of Practice (CoPs) on IW, CW, when relevant.

4.4 Governance

Both the strategy and its implementation are critical to successful exploitation of knowledge. Many KM strategies fail not because there is something intrinsically wrong with them, but because they are not well implemented.

There must be a good strategy, but also appropriate organizational structure, systems, resources and the right people to execute it.

It is crucial to create teams that are centers of excellence for their specific knowledge skills and experience. Also, the appropriate technical equipment (hardware and software) and adequate expertise are key ingredients to ensure expected results. The GEF STAP concurs with the need for adequate resources noting that “KM delivers cost-efficiency and savings, for example, reduced failure of projects, and it needs upfront resourcing to cover for additional time, specific tools and database needs. [...] KM professionals are essential in applying the discipline, including creating tools and products that help establish KM as a standard practice throughout the organization\(^{41}\).”

\(^{40}\) More info at www.iwlearn.net

\(^{41}\)
The KM strategy of the MedProgramme will require different sets of expertise for its execution. It is anticipated that the following professional profiles will be required throughout the duration of the programme (either full-time and/or part-time):

- Knowledge Management Specialist (to coordinate the implementation of the KM strategy)
- Communications assistant (to support the execution of the communications plan)
- Data Analyst (to help harmonize data produced by Child Projects and maintain the database)
- Web Developer (to develop the KM platform)
- IT Specialist (to administer the IT-based platform and systems)
- Experts in copy-editing, video-making, graphic design, translations, etc. to be contracted as needed.

These and other services will be provided by the staff of the MedPCU, consultants hired to carry out specific tasks and by outsourcing the work to companies (such as for the project management tool, hosting providers, licenses, etc).

“Knowledge-sharing is at the crossroads of core and support functions.” Knowledge-sharing tasks and responsibilities should be as much as possible integrated in the jobs descriptions and terms of reference of projects’ executing teams.

As efforts leading to an effective knowledge management system can be seen as time-consuming and not immediately benefitting the project outputs, there must be a good system in place to incentivize project teams to dedicate time and resources to KM. As noted by the GEF Strategic Technical Advisory Panel (STAP):

“there needs to be better recognition for KM inputs, achievements and publicity. Rewarding projects at mid-term, for example, for demonstrating the use of knowledge to improve and/or adapt the project to meet project objectives may be an effective incentive”. The form of these rewards can vary, but in the case of the MedProgramme they can range for instance from prizes announced at the Annual Stocktaking Meetings, to public recognition mentions (internally or externally the portfolio, such as in the Med Bulletins), among others.

---

5. Legacy and Sustainability

“Share your knowledge. It is a way to achieve immortality.” – Dalai Lama XIV

The benefits arising from managing knowledge properly are both far reaching and hard to measure. This strategy represents one of the first attempts to manage knowledge holistically within a GEF-financed program with multi-focal areas Child Projects, and the role played by the Support Child Project 4.1 in implementing the programme-wide KM strategy is innovative yet challenging. The envisaged result is to effectively support portfolio coordination, provide beneficiary countries with long-lasting capacity and tools to improve national and transboundary coastal ecosystems, and enrich the GEF Partnership with replicable solutions and lessons learned for future interventions in the Mediterranean region. Its success will be determined by the commitment and ownership of all executing partners and stakeholders, in addition to adequate resources and means in place. Its sustainability will translate into reinforced capacity (information, expertise, awareness...) of MedProgramme stakeholders to address environmental challenges making use of a modular knowledge hub which will continue to evolve after the programme ending.

The contracting parties of the Barcelona Convention will be the custodians of the KM structure implemented for the MedProgramme and will carry forward the legacy of the MedProgramme by supporting informed decision-making, paving the way for more investments and interventions, and encouraging broader adoption and knowledge transfer to improve environmental security in the coastal areas of the Mediterranean.

1. Introduction

1.1 Defining Gender Mainstreaming – from 1997 to 2017

In 2017, shortly after the 23rd Conference of the Parties (COP) in Bonn concluded with the ‘Fiji Momentum for Implementation’, the United Nations Framework Convention on Climate Change (UNFCCC) announced its pioneering Gender Action Plan. The COP23 Presidency underscored the priority of the Plan1 to increase awareness of, and generate support for the development and effective implementation for, gender-responsive climate and environmental action. Showcasing not only the consensus of the State Parties on these key issues, this critical achievement encapsulates the growing international efforts towards gender mainstreaming and the integration of gender equality perspectives in sectoral policies and programs, since articulated by the UN Economic and Social Council (ECOSOC) twenty years ago.

In July 1997, the Group of Specialists on Mainstreaming, appointed by the ECOSOC, laid out the tenets of gender mainstreaming, which continue to spur and inform UN action:
“Gender Mainstreaming is the process of assessing the implications for women and men of any planned action, including legislation, policies or programs, in all areas and at all levels. It is a strategy for making women’s as well as men’s concerns and experiences an integral dimension of the design, implementation, monitoring and evaluation of policies and programs in all political, economic and social spheres so that women and men benefit equally, and inequality is not perpetuated. The ultimate goal is to achieve gender equality”2.

Elaborating upon this definition, the Division for the Advancement of Women on Gender Mainstreaming, added:
“Gender Mainstreaming requires more than a quantitative change in numbers of women and men participating in, or benefiting from, policies and programs. It requires a transformation of all sectoral policies at all levels, and of institutions, organizational practices, attitudes and systems that shape them so that they fully consider the realities, needs, and views of women.”3

The conceptualization and definition of Gender Mainstreaming, as presented above, derives from, and builds on, the preceding conversation of inclusion of women and gendered considerations in development policy. To elucidate, it does not represent a ‘totally’ new approach – but rather, a unique take on gender and developmental policy antecedents dating back to the early 1970s. Functioning as a pivot, gender mainstreaming builds on the Gender and Development (GAD) approach, which differentiates itself from the preceding Women in Development (WID) and Women and Development (WAD) approach, by discarding the notion that gender perspectives should automatically entail the demarcation of women as a target group. The image below4 visualizes the timeline of these different approached leading up to gender mainstreaming, the approach chosen for the Mediterranean Sea Program (MedProgramme): Enhancing Environmental Security Gender Strategy towards

incorporating gender-responsive project outcomes, gender-sensitive policy formulations, and gender-aware decision-making.

![Figure 1: Timeline towards present-day Gender Mainstreaming approach.](adapted from Rathgeber [1988] by author)

### 1.2 Global Environment Facility (GEF) and UN Environment

Keeping with the above mandate of gender mainstreaming and promoting women’s empowerment, both the GEF and UN Environment have prioritized delivering inclusive and gender-responsive environmental results, and adaptation and mitigation solutions towards climate risks.

Having launched its initial gender policy in 2011, the GEF approved a reinforced policy in November 2017 at the 53rd Council Meeting, shifting the focus from a ‘gender-aware, do no harm’ approach to a ‘gender-responsive, do good’ approach. This requires robust standards in the design, implementation and evaluation of GEF activities, and introducing measures that will allow the GEF, over time, to better leverage strategic opportunities to address gender gaps critical to the achievement of global environment benefits. More recently, the GEF-7 Programming Directions, prepared by the Secretariat in the April 2018 Stockholm meeting further clarifies the GEF’s evolving and progressive gender strategy – by providing action points for each GEF focal point. It lays out clear gender standards for each domain under the GEF, and for the MedProgramme, gender directives of the:

- **Biodiversity focal area** (such as: assessments to understand gender-disaggregated biological resource, providing women and other natural resource-dependent groups equal partnership in protection management);
- **Climate Change focal area** (such as: incorporating action points to address the different climate risks faced by men, women, boys and girls and providing adaptation alternatives that improve the status quo);

---

5. See here for the latest GEF Gender Mainstreaming guide (EN). GEF. (2017) (publication)
c. Chemicals and Waste focal area (such as: understanding the socioeconomic dynamics that expose men and women to different chemicals, as well as their biological implications),

d. IW focal area (such as: gender assessments and social analysis during project preparation, and differentiated reporting of output indicators and additional measures based on the GEF’s Gender Action Plan\(^8\)) are particularly relevant and have been incorporated as action points for the operationalization for this Strategy.

UN Environment recognizes the role of gender equality as a ‘driver of sustainable environment development’\(^9\), particularly to enhance environmental security and climate resilience; to assuage the stresses on natural resources and dependent communities, including unsustainable management of coastal resources; and to preserve the health of large marine ecosystems (like the Mediterranean) which provide environmental and economic services to coastal populations. Overall, the organization focuses on the increased visibility and capacity of vulnerable groups in sustainable development policy- and decision-making. To that end, the agency has produced a lessons-learnt report\(^10\), through gender case study compilation, on issues homologous with the overall MedProgramme agenda: gender integration in Integrated Coastal Zone Management (ICZM) and Integrated Water Resources Management (IWRM), marine and coastal pollution, coastal disaster risk reduction and climate change adaptation, coastal developmental planning, and advocacy for gender-inclusive marine ecosystem management and research.

### 1.3 The MedProgramme Gender Mainstreaming Strategy

The MedProgramme represents a pioneering effort, being the first GEF programmatic multi-focal initiative in the Mediterranean region, aiming to operationalize agreed-upon priority actions to reduce major transboundary environmental stresses in its coastal areas, while strengthening climate resilience and water security, as well as improving the health and livelihoods of coastal populations. The MedProgramme will be implemented in nine beneficiary countries sharing the Mediterranean basin: Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro, Morocco and Tunisia. The Lead GEF Agency is UN Environment\(^11\). Its eight Child Projects\(^12\) cut across four different Focal Areas of the GEF (Biodiversity, Chemicals and Waste, Climate Change, and International Waters), and involve a wide spectrum of developmental and societal sectors, ranging from banking institutions, the private sector, government and non-government bodies, industry, research, media, and various other organizations.

---

\(^8\) Ibid, p. 55.

\(^12\) At the time of its approval in 2016, the MedProgramme comprised of seven Child Projects. Subsequently, UN Environment/MAP developed a Mediterranean-focused climate change adaptation project, for financing through the Special Climate Change Fund (SCCF). It was agreed by the UN Environment/MAP, UN Environment and the GEF that this SCCF project would be managed, for all intents and purposes, as an additional Child Project of the MedProgramme. Hence, the number of Child Projects now stands at eight.
Seeking to maintain funding agency (GEF) and lead agency (UN Environment) organizational priorities outlined above, as well as preparing for a proactive GEF-7 ready portfolio, this Gender Mainstreaming Strategy, developed in the Project Preparation Grant (PPG – between June to September, finalized in October) phase, will provide tailored action points to improve the gender status quo in the countries; place gender-responsive activities and gender-aware policy-making at the core of the MedProgramme agenda; and partake as well as further the existing efforts on gender equality, to leverage opportunities for inclusive and accessible environmental and social co-benefits.

2. Methodology

This Gender Mainstreaming Strategy (GMS), as contextualized above, has been tailored for the MedProgramme. Developed with a two-fold framework, the Strategy is informed by: (a) political ecology and gender studies literature\(^3\) (presented below) to establish a mixed methodology, and (b) Program component- and country-level diagnostics to identify the baseline scenario (Section 3), which the Strategy expects to positively impact with strategic, selective and appropriate mainstreaming measures in project-specific contexts.

At the outset, this Strategy adopts a political ecology lens, which aims to influence policy development, environmental action and investment programs by ‘offering chains of explanations’ rather than single and disjointed root causes. This perspective, when combined with a gender-lens, highlights the socio-political dimensions of coastal and natural resource access, control, distribution and agency, which further govern issues such as environmental degradation, climate risks and resource management policies.

In the words of Rocheleau (1996), gender is relevant to a political ecology perspective as:

“A critical variable in shaping resource access and control, interacting with class, caste, race, culture and ethnicity, to shape process of ecological change, the struggle of men and women to sustain ecologically viable livelihoods, and the prospects of community for sustainable development.”\(^4\)

Thus, as the Gender Mainstreaming Strategy for the MedProgramme, this Strategy will espouse and embed the use of a combined political ecology- and gender-lens for the constituent projects. This will create a Program-wide focus (albeit, in different site-specific contexts) on understanding the spatially and temporally contingent ways in which gender issues, social relations, and the environment interact. This programmatic approach will, then, be able to consider the gamut of gendered dimensions present in the Mediterranean, such as: gender division of labor, male and female participation in labor, gendered environmental rights and responsibilities, environmental politics and governance, and collective action and resilience.

Secondly, the importance of gender-relevant and vetted data to provide empirical evidence to the policy and program needs is prioritized. Thus, available data indicators (particularly,  

from the World Bank Gender Data Portal and UNDP indices) and country-specific (and where available, local site-specific) statistics have been extensively used to justify the concerns raised by the Strategy. The data on each country has been collated through gender diagnostics of desk-reviewed literature and secondary statistics, which has further revealed the existing inconsistency and low relevance accorded to gender considerations and corresponding statistics within on-going environmental projects, programs and policies.

Thus, by using gender-relevant data to contextualize its priorities, the Strategy will attempt to set an example and highlight both the need to incorporate targeted and selective gender actions based on empirical data within the MedProgramme, as well as the urgency to bolster internal and country-level monitoring systems for the collection and reporting of sex-disaggregated, environmentally-related data from project, sub-national and national levels.

3. Baseline Scenario for MedProgramme Components

The MedProgramme builds on the significant achievements of the MedPartnership\textsuperscript{15} and ClimVar & ICZM\textsuperscript{16} GEF Projects. The latter have enriched the knowledge on the Mediterranean environment and unraveled the implications of climate change and variability in the region; strengthened countries’ mutual trust, cooperation and common purpose; consolidated the partnership among countries, UN bodies, Civil Society Organizations, bilateral donors and the European Union; tested on the ground feasibility and effectiveness of technical and policy instruments aimed at addressing major present and future threats to environmental sustainability and climate-related impacts. However, despite these different successes, the two projects were limited by the lack of adequate gender-responsive planning in their sectoral strategies and programs. This represents a ‘missed opportunity’, as incorporating the gender-lens from project preparation phase through to the monitoring and evaluation phase aid in the mapping of links between gender and environment, as well as identifying positive synergy and improve social/gender and environment outcomes from the outset. This Gender Mainstreaming Strategy, which has been developed as an input in the MedProgramme’s preparation phase with the scope of scaling up in parallel with the advancement of the program cycle, thus addresses the gender-blind baseline represented by earlier initiatives.

The MedProgramme represents a comprehensive and powerful response to the environmental and socioeconomic challenges faced by the Mediterranean, in light of continued degradation of coastal zones, growing impacts of climate variability, and loss of livelihoods and deterioration of social conditions. Its objective is to kick-start the implementation of agreed-upon priority actions to reduce the major transboundary environmental stresses affecting the Mediterranean Sea and its coastal areas, while

\textsuperscript{15} Strategic Partnership for the Mediterranean Large Marine Ecosystem-Regional Component: Implementation of Agreed Actions for the Protection of the Environmental Resources of the Mediterranean Sea and its Coastal Areas (MedPartnership) – GED ID 2600

\textsuperscript{16} Integration of climatic variability and change into national strategies to implement the ICZM protocol in the Mediterranean (ClimVar & ICZM) – GED IF 3990.
strengthening climate resilience and water security, and improving the health and livelihoods of coastal populations. The focus will be primarily on hotspots of land-based pollution, harmful chemicals and wastes (POPs and mercury), and excess nutrients; critical sections of the coastal zone particularly affected by climatic variability, freshwater stress and habitat degradation the efficient and sustainable management of priority marine protected areas; measuring progress to impacts and overall Program coherence. Dedicated Child Projects (eight) will prioritize each of these key issues. The Child Projects will be entry points for gender mainstreaming actions through gender assessments and action plans that determine targeted gender-responsive action through project objectives and outcomes at the project, local and national level.

The following table posits the hypothetical effects of a gender-blind approach to the MedProgramme components (the tentative child project – CP – is mentioned alongside), as opposed to mainstreaming robust gender outcomes within the same:

### TABLE I: GENDER-BLIND v. GENDER-RESPONSIVE APPROACH

<tbody>
<tr>
<td>Reduction of land-based pollution in priority coastal hotspots, and measuring progress to impacts</td>
<td>1.1</td>
<td>Top sources of land-based pollution, contaminating marine and coastal hotspots, result out of anthropogenic activities such as usage of heavy metals and untreated dumping in river systems, sewage, litter, plastic pollution, usage of pesticides and fertilizers and synthetic organic compounds.</td>
<td>Oxfam’s <em>Handbook of Development and Relief</em> provides one of the pioneering accounts of the connections between poverty and environmental degradation, noting a ‘downward spiral of cause and effect’ – ‘poverty can cause environmental degradation, as poor people over-exploit already strained resources, and environmental degradation causes further poverty as people are unable to find the resources to meet their daily needs.’ Environmental change, climate disruptions and damage to marine systems and coastal zones have gendered impacts, and women and men shoulder these burdens differently. In what is identified as the ‘feminization of poverty’ or women’s increasing burden of and share in global poverty, economists and development analysts have observed that ‘women constitute an estimated 70% of the world’s poor people, and households headed by women are more vulnerable to poverty.’</td>
</tr>
</tbody>
</table>

---

1.2 land-based pollutants, and therefore, marine pollutants, both in health and livelihood indicators.

For example, environmental degradation-induced livelihood impacts are differentiated in coastal areas – fishing communities, based on local gender norms and informal nature of work, relegate remunerative activities (which often tend to be associated with risk, like ‘going out to the waters) to the men, while women perform post-harvest work, which may not always be remunerated properly, if at all. The gendered allocation of remuneration, thus, creates a disparity in economic capital, and in turn impedes the capacity to adapt to environmental change and climate disruptions. Marine contaminants threaten both human health and the health of marine organisms. However, health impacts are gender-differentiated as well. Many marine and coastal contaminants are particularly dangerous for pregnant women and lactating mothers, as well as for fetal development.

1.3 women alone…. are the world’s poorest households as a general trend.\(^{19}\) For example, environmental degradation-induced livelihood impacts are differentiated in coastal areas – fishing communities, based on local gender norms and informal nature of work, relegate remunerative activities (which often tend to be associated with risk, like ‘going out to the waters) to the men, while women perform post-harvest work, which may not always be remunerated properly, if at all. The gendered allocation of remuneration, thus, creates a disparity in economic capital, and in turn impedes the capacity to adapt to environmental change and climate disruptions. Marine contaminants threaten both human health and the health of marine organisms. However, health impacts are gender-differentiated as well. Many marine and coastal contaminants are particularly dangerous for pregnant women and lactating mothers, as well as for fetal development.\(^{20}\)

\(^{19}\) Ibid.

\(^{20}\) See Global Gender Environment Outlook, Section 2.5 for more. UN Environment. (2016)
According to a recent report\textsuperscript{21}, ocean-related activities in the Mediterranean Sea generate an annual economic value of 450 billion dollars with economic assets for coastal economies and communities amounting to 5.6 trillion dollars. The need for enhancing sustainability and climate resilience in the region is crucial, as the Mediterranean is experiencing a number of immediate coastal problems, which require both short-term and long-term coastal management. Regional scale studies indicate that the Mediterranean is particularly vulnerable to increased flooding and saltwater intrusion as sea levels rise.\textsuperscript{22} The region has also been marked out as a ‘hot spot of climate change’, with an increase in air temperature range of 2.2°C to 5.1°C predicted over the period of 2080 – 2099.\textsuperscript{23}

While impacts of environmental degradation and climate risks are undoubtedly severe for the entire coastal populaces, men and women, privileged and vulnerable communities, young and the elderly shoulder burdens unequally. Often the vulnerable and marginalized groups are limited by the exclusion of their needs and perspectives from regional negotiations and management policies. The immediate and long-term coastal problems being faced by the Mediterranean have implications for complex gender relations in the region, which are a kaleidoscope\textsuperscript{24} of overlapping social, economic and cultural roles, spread across a diverse multitude of countries and communities. The European Mediterranean countries have distinct social patterns and gender norms, which differ from the Middle East and North Africa (MENA) Mediterranean countries, for example. Additionally, the varying political situations in the region also determine how women and men are able to access and leverage sustainable development opportunities to be able to cope with environmental degradation, pressures on natural resources and coastal and marine ecosystems, and climate risks.

For the northern Mediterranean countries (the Western Balkan nations), labor market dynamics exhibit a significant gender gap: women’s employment rates (especially for marginalized communities such as Romas) are lower, along with an existing gender wage gap. Since economic capital is among the important determinants of coping capacities to external shocks (in this case, water stress, degradation of coastal aquifers, loss of

\textsuperscript{21} See Reviving the Economy of the Mediterranean Sea: Actions for a Sustainable Future for more. WWF and The Boston Consulting Group. (2017)

\textsuperscript{23} See Climate Change and Energy in the Mediterranean for more. European Investment Bank. (2008)

\textsuperscript{24} See this report by the Union for the Mediterranean (UfM) regarding an action plan towards investing in gender equality in the region.
coastal livelihoods, climate impacts et al), women (and other marginalized groups, including ethnic minorities) are more likely to be vulnerable. The ‘double disadvantage’ of the situation should also be reckoned with: due to lack of viable economic capital, vulnerable groups are often excluded from socio-political control over coastal zone and water resources (coastal aquifers, particularly) management policies – increasing the possibilities of exposure to the threats looming in the Mediterranean region. For MENA countries, coupled with barriers to the labor market and employment opportunities, women face institutionalized exclusion from civil society and political spheres. Decision-making power within the household and the polity is limited, reducing women’s capacities to engage in the public sphere and gear development opportunities to safeguard their interests. In recent years, however, women have been capitalizing on opportunities presented by pluralistic interpretations of traditional gender norms and entering both the work force and the public space. The gains achieved through social change in this region may not keep pace with the risks and threats arising from the lack of proper management policies for natural resources and the coastal zone, and growing threats of climate change and environmental degradation in the region. As with the European Mediterranean countries, burdens of emerging risks and shocks may fall on the vulnerable groups.

(Refer to footnote 12, for more information on the SCCF Project – and why it is a Child Project under the MedProgramme)

| Protecting marine biodiversity | 3.1 | The Mediterranean’s biodiversity underpins the ability of ecosystems | Until recently, there was a lacuna in the empirical and normative literature on gender and marine biodiversity. However, |
to provide humans with the services they require to survive – although as Hooper shows, delineating the role of biodiversity in ecosystem services and relative roles of difference functional groups has been extremely complex. The Mediterranean’s predominantly coastal population is increasingly threatened by the loss of biodiversity, due to mismanagement and unsustainable use, and this situation is projected to worsen with the coupled effects of human-induced climate impacts, such as warming sea surface temperatures, altering ocean chemistry and increasing run-off of land-based pollutants and sediments.25 Resuscitating and protecting these marine ecosystems, which form the resource base for coastal economic and social activities, requires all possible expedition.

Robust coordination and knowledge management strategies panning the MedProgramme have to be operationalized to ensure its success. Given the breadth and value of the initiative, as well as the numerous partners and focus points, these strategies will ensure: stakeholder representation

Knowledge management and program coordination

| 4.1 | Knowledge management and program coordination, if carried out with a top-down approach and without a stakeholder-facing participatory approach, risks excluding the needs with reviewed studies on the role of gender with respect to conservation, particularly that of mangroves and their ecological significance, brought to light the clear link between gender and biodiversity and conservation outcomes. According to the Convention on Biological Diversity, considering gender issues in relation to biodiversity involves identifying the gender roles and relations have on the use, management and conservation of biodiversity. To begin with, this MedProgramme component should address the knowledge gap regarding gendered biodiversity practices in the region, through extensive data and information collection, stakeholder consultations and focused-group discussions. This would contribute towards gender-responsive policies within marine resource management and biodiversity conservation plans that can increase the sustainability of outcomes by incorporating artisanal and traditional knowledge gathered from both women and men. Exposing gender-differentiated biodiversity practices26 will also help demarcate the different levels of harm caused by different groups (income-generating activities, traditionally relegated to men, may be more exploitative in some instances), as well as the inequalities in control of resources. Biodiversity conservation plans can be truly effective if they address poverty, inequality and resource access dynamics among coastal communities.27

---

26 See the gender tab on Convention on Biological Diversity for more.
27 The Secretariat of the Convention on Biological Diversity hosted a meeting in Bangkok (December 2017) to develop training material to advance gender inclusion in biodiversity planning in the Asia-Pacific region. See the reporting here.
and concerns of beneficiaries. Additionally, procedural and red tape hurdles tend to disproportionately affect those with limited resources and access to governing mechanisms, support organizations and implementing agencies.

and engagement, technical and administrative coordination of the program; establish a commune of practice and initiative among different stakeholders and partners; management of knowledge generated on an accessible platform (both data and normative) as well as dissemination of lessons learnt and best practices in later stages of the program cycle; high-quality and timely systems for monitoring of the Program’s progress to impacts. In tandem with a knowledge management and program coordination strategy, a gender mainstreaming strategy for the MedProgramme will be developed to provide critical gender-responsive research inputs for Programme components, as well as to espouse a gender-aware policy in the region, taking stock of the existent inequities and gender norms of the Mediterranean. Gender mainstreaming shall be pursued within the different Child Projects, with tailored gender assessments and action plans determining strategic and selective action to improve the baseline inequality within project- and country-specific dimensions. This will safeguard the interests and priorities of the vulnerable and marginalized communities among the Mediterranean coastal populaces, as well as increase the sustainability and inclusion of the MedProgramme’s priorities in the region and contribute to the regional conversation on decreasing inequality, poverty and vulnerability.

4. Baseline Scenario for MedProgramme Countries

The nine Mediterranean countries participating in the MedProgramme (Albania, Algeria, Bosnia and Herzegovina (BiH), Egypt, Lebanon, Libya, Montenegro, Morocco and Tunisia), face different developmental challenges and socioeconomic disparities, as seen from the country profiles, developed for this Gender Mainstreaming Strategy. These data profiles borrow from UNDP’s Human Development Index, Gender Inequality Index, and Gender
Development Index. Additionally, they refer to the Global Gender Gap Index (World Economic Forum) and compiles national-level poverty statistics (conducted by national authorities of the nine countries, as well as the World Bank, in some cases). These indices have differing methodologies, and are being employed, at the outset, as indicative (and not conclusive) measures of current levels of development, gender equality, and poverty and labor force participation.

As Booysen’s research shows, composite indices present both challenges and advantages. It should be noted that numerous fallacies have been identified in the methodologies employed in composite indexing. These indices are mainly quantitative, and present empirical and aggregate measures of complex development phenomena, making values apparently objective, at the cost of subjective nuances. Yet, these also remain invaluable as useful supplements to income-based development indicators, understanding relative degrees of development, simplifying complex measurement constructs as well as providing access to non-technical audiences. To balance this dichotomy, ranks have been removed in certain indices and have been linked in the footnoting, and the broader development categories (high/medium/low development) have been used.

TABLE III: GENDER INEQUALITY INDEX (GII)\(^{40}\)
(out of 159 countries – UNDP, 2018)

**Defining the GII:** This index, showing inequality in achievement between men and women in three aspects (reproductive health, empowerment and labor market), provides a useful gender baseline in terms of health equity, economic capital and financial access, speaking to the gender opportunities of men and women in the countries. This baseline has been elaborated upon using existing gender studies literature on each country.

**Relevance of the GII:** This index provides a primary understanding of the different levels of achievements on basic development indicators between men and women. This displays useful features towards the gender status quo hypotheses, which could then be derived in the context of this project.

**Indicative, not conclusive:** In line with Booysen’s argument, the GII should be treated as indicative, not conclusive. Pernmayer finds that the functional form of the index could be unclear, particularly the inclusion of indicators of relative performance of women vis-à-vis men, along with absolute women-specific indicators.\(^{41}\)

<td>100th</td>
<td>In Algeria, social codes affect women’s empowerment. Since labor force participation disparity is pronounced, women lag behind on economic capital needed to combat risks arising from environmental degradation, mismanagement of water and coastal resources, and climate shocks. According to the Arab Barometer, in 2017, compared to 2013, a greater number of Algerians regarded higher education as more important for men, as well as reinforced the notion that married women should be ideally relegated to household duties.(^{43}) This also makes them dependent on the patrilocal structure of Algerian society.</td>
</tr>
<tr>
<td>Bosnia and Herzegovina (BiH)</td>
<td>37th</td>
<td>Despite progress in closing the gender gap in endowments - mainly in education among the younger generation - BiH still faces a number of gender issues, particularly in women’s access to economic and employment opportunities. Alongside improved educational outcomes, significant gaps remain in labor market participation and employment in favor of men, as women continue to face challenges in accessing economic opportunities.(^{44}) Additional obstacles continue to exist for women in exercising agency (the power to choose and decide options to preserve to act for oneself), particularly managing domestic work, lack of political representation and participation as well as widespread gender-based violence.</td>
</tr>

<tbody>
<tr>
<td>Egypt</td>
<td>101st</td>
<td>Political, social and economic capitals are not equitably distributed among Egyptian men and women. Without access to these vital resources, the risks identified by MedProgramme will only burden those at the lower echelons of society. Despite improvement of young women’s education levels in recent times (Egypt’s rank improved by 34 spots in the latest GII quoted here), the workforce participation and retention rates remain unperturbed, signaling a stagnated job market and scarce employment opportunities. Egypt also faces some particular gender-specific barriers in high numbers, such as FGM and sexual harassment, arising out of sexual inequality between men and women in the country.</td>
</tr>
<tr>
<td>Lebanon</td>
<td>85th</td>
<td>Lebanese women face the least gender disparity in the Arab world with their male counterparts. Despite this, discriminatory social codes, particularly the focus on intersectional civil and family laws, continue to impede women’s empowerment. Although the gender gaps at higher levels of education are reversing, women continue to face entry barriers to the labor market as well as time poverty due to the predominance of unpaid care work.</td>
</tr>
<tr>
<td>Libya</td>
<td>38th</td>
<td>Women in Libya have had a long history of actively participating in the economic, social and political development of the country, going back to the 1950s. Yet, with Gaddafi’s introduction of the Declaration of the Authority of the People in 1977 and the Great Green Charter of Human Rights in the Age of the Masses in 1988, these rights were compromised at a substantive level. Furthermore, traditional family laws, as a general trend in the MENA region, continue to disadvantage women and exacerbate their time poverty. The 2011 uprisings signaled that women were entering the public space, yet changes in women’s empowerment has been sluggish in the past seven years.</td>
</tr>
<tr>
<td>Montenegro</td>
<td>32nd</td>
<td>Montenegro is relatively advanced in terms of progress towards gender equality. This enhances the capacities of Montenegrin men and women to face climate-risks and capitalize on adaptation opportunities. However, gender-inequitable dynamics remain in important determinants such as access to labor markets, health equity et al, rendering certain demographics vulnerable.</td>
</tr>
<tr>
<td>Morocco</td>
<td>119th</td>
<td>Political, social and economic capitals are not equitably distributed among Moroccan men and women. Without access to these vital resources, climate risks will only burden those at the lower echelons of society. Gender equity in labor force participation is one of the lowest in the world, disadvantaging women further: women lag behind on economic capital needed to combat climate shocks and risks.</td>
</tr>
<tr>
<td>Tunisia</td>
<td>63rd</td>
<td>In Tunisia, traditional social codes affect women’s empowerment. Since labor force participation disparity is thoroughly pronounced, women lag behind on economic capital needed to combat climate shocks and risks. This also makes them dependent on the patrilocal structure of Tunisian society. However, the January 2011 uprisings signaled that women were entering the public space, leveraging opportunities for their economic empowerment, although it remains to be seen if the force of this societal shift can keep pace with climate risks.</td>
</tr>
</tbody>
</table>

Defining the GDI & GGI: The GDI (UNDP) index shows the ratio of female to male HDI values. GDI expresses values in deviation, hence, in order to facilitate understanding GDI grouped categories have been used (as grouped by UNDP) to show the absolute deviation from gender parity in HDI values. This further reiterates the results of the HDI and GII (also by UNDP), and shows the real gender gap in human development achievements.

The GGI (WEF) benchmarks 144 countries on their progress towards gender parity on four thematic dimensions – economic participation and opportunity, educational attainment, health and survival, and political empowerment. The Index benchmarks national gender gaps on economic, political, education- and health-based criteria, and provides country rankings that allow for effective comparisons across regions and income groups, over time.

Relevance of the GDI & GII: Since the GDI and GGI use different methodologies, and are conducted by different agencies, this report does not suggest a causality between the two indices. However, a correlation is undeniable, and both indices pick up similar rates of gender disparity in the MedProgramme countries.

Indicative, not conclusive: In line with Booysen’s argument, the GDI & GII should be treated as indicative, not conclusive. Geake Dijkstra and Hanmer find that although gender-related development indices have increased attention towards ‘feminization of poverty and underdevelopment’, more robust data needs and indicators are required to create aggregate indices that are sensitive to contemporary trends in gendered privation, particularly with the categorization of ‘women’.

**TABLE V: SOCIOECONOMIC FACTORS**

*Note:* This table is compiled from various sources, and determines poverty levels (according to USAID income grouping), rural-urban divide and labor force participation parity in the MedProgramme countries.

**Poverty Level:** Environmental degradation and climate change is a threat multiplier, and often its impacts combine with poverty, hence this is an important indicator, corroborating HDI ranking. To illustrate this, the Multidimensional Poverty Index has been used. (The Oxford Poverty and Human Development Institute (OPHI), and UNDP calculate the MPI, for measuring acute poverty in developing countries. It complements traditional income-based poverty measures by capturing the severe deprivations with regard to different indicators: education, health, and living standards. The index not only identifies those living in multidimensional poverty, but the extent (or intensity) of their poverty. The MPI can help the effective allocation of resources by making possible the targeting of those with the greatest intensity of poverty; it can help address some SDGs strategically and monitor impacts of policy intervention.53

**Rural-Urban Divide:** Climate risks take different forms in rural and urban areas, but lack of development and investment in rural areas (particularly in the Mediterranean) often impedes adaptive capacities of vulnerable demographics, who also derive their livelihoods (in this case, coastal livelihoods) from managed and natural resources.

**Labor force participation parity (% of working age population active)**54: In the Mediterranean, one of the prime arenas of gender disparity is labor force participation parity. The region is plagued with high unemployment rates55 (12.5% average), and this phenomenon remains a gendered one: women and youth are less likely to be employed than men, as a general trend. Additionally, the existing gap in labor force participation indicates that women possess less economic capital, and are limited to gendered (mostly unpaid care work) roles. This directly correlates to lessened participation in coastal economies and scarce or unstable livelihoods; lack of decision-making power both within the household and larger policy frameworks such as coastal resource use and water management; and, greater exposure to repercussions of marine environmental degradation, water stress and potential climate risks (which often acts as a threat multiplier, in this context).

Albania

During the socialist rule, the government policy of full employment boosted female participation and, as a consequence employment rates were higher than the average figures of the OECD countries. Policies such as investment in childcare facilities and female education stimulated women to enter and remain in the labor market. The market economy disadvantaged women by providing unstable employment opportunities, although education outcomes and employment sectoral options have improved in recent decades, leading to the widening of the gender gap in labor force participation.58

75 Find more on Lebanon on the ERF website.
76 See this AN-NAHAR coverage.
Libya 40% below the Middle-Income-Country Poverty Line.
Although economic growth is projected to rebound at around 15% in 2018, Libya’s oil-dependence does not benefit the majority of the Libyan populace. High inflation coupled with weak basic service delivery have exacerbated socioeconomic exclusion in the country. Libya continues to experience conflict and insecurity.

Libya’s population is 85% urban, concentrated particularly in Tripoli, Benghazi, Misrata and Bayda. The dynamics of urban poor show a pan-Mediterranean attribute: job creation is low, youth unemployment is high, and the vulnerable groups are trapped within the informal sector.

Female labor force participation is very low in Libya, relating to the phenomenon that the gender difference in the labor force participation of the MENA region is the widest in the world. Women often take on informal sector roles, particularly starting their own small business, despite receiving higher rates of advanced education than men (77% versus 63%). Movement in Libya for women is severely limited and is another deterrent to workforce participation.

Montenegro 8.6% below the Middle-Income-Country Poverty Line. In Montenegro, there has been sustainable reduction in poverty in the last five years.

In 2010, MONSTAT finds that not only are the rural populace at a higher poverty risk, they also face more entrenched forms of poverty.

As the country emerged from dirigisme, social property was privatized, and the economy sprouted ‘grey areas’ of undeclared or unregulated work. Post-conflict Montenegro is still reeling from the economic effects of war, which increased unemployment (17.8% in 2016) and bolstered GDP loss. The Roma populace face entry barriers to the workforce, and employment rates are far below national averages: 47% Roma male and 8% Roma female are employed.

Morocco 15.5% below the Lower-Middle-Income-Country

3 million out of the 4 million poor live in rural areas

25% female 74.1% male
In Morocco, there has been a steady decline in poverty, though the underlying factors may be remittances, deceleration of population growth and macroeconomic stability. Inequalities between rich and poor are still abounding, and poverty essentially has a rural face in the country. The MPI also reveals that an additional 12.6% of Moroccans are dangerously ‘near’ poverty. Among the 15.5% poor, 5% are in ‘severe’ multidimensional poverty.

The subjective poverty rate has increased by 15% from 2004 figures in rural Morocco. Meanwhile, the urban poverty rate is half of the national average in 2001, and in 2014, stands at one-third.

Female labor force participation is low in Morocco, relating to the phenomenon that the gender difference in the labor force participation of the MENA region is the widest in the world. However, Morocco is entering a period potential demographic dividend, with the number of working-age population, relative to below 15 and above 64 years, increasing. This could either signal a potential economic boom or an unemployment crisis, if economic activity is not encouraged and made inclusive for the marginalized.

---

**Poverty Line.**

The lower-middle-income country Poverty Line, as defined by the World Bank, stands at consumption below the standardized poverty line of $3.10/day. World Bank. (2017)

---

**Tunisia**

- **24.7%** below the National Poverty Line.

Poverty rates in Tunisia have seen a significant increase, from 15.5% (2010) to 24.7% (2018). Income disparities are high: the top 20% of Tunisians earn 46% of the national income, while the bottom 20% earn only 5.9%. Civil unrest since the 2011 revolution has increased by 15%.

Rural areas in Tunisia remain marginalized and underprivileged, leading to high rates of rural to urban migration, particularly towards Greater Tunis and its agglomeration economies.

Female labor force participation is low in Tunisia, relating to the phenomenon that the gender difference in the labor force participation of the MENA region is the widest in the world. Like Morocco, Tunisia faces crucial demographic transition in the coming years, yet barriers to the job market remain high. Young women are particularly vulnerable and face exclusion from economic activities.

- **25.1%** female
- **71.3%** male

91 Libya Women’s Demands in the Constitution (UNDP-led Cairo consultations). (2017)
Means to an End: Transformative Gender Mainstreaming Towards Gender Equality

The conversation on gender mainstreaming to mobilize efforts on gender equality and reduction of discriminatory gender practices and social norms has gained currency as an intellectual concern, technical solution and international consensus. However, the discursive landscape of gender equality has shaped and reconfigured what gender mainstreaming could potentially achieve in different contexts, particularly –

- the vision of equality as sameness, which aspires to a gender-neutral world where women are treated according to the same principles, standards and norms as men, enjoying equal rights and opportunities; and, the approach of difference or reversal, which problematizes the existence of unquestioned patriarchal norms, reconstructing the political by seeking recognition of non-hegemonic gendered identities that have been treated as different in comparison to male normative identities and cultures.92

This Gender Mainstreaming Strategy adopts the latter transformative approach ('the approach of difference or reversal'), positing a gender equality vision for the MedProgramme that questions established categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is

---

5. The MedProgramme’s Gender Approach, Target and Components

5.1 Means to an End: Transformative Gender Mainstreaming Towards Gender Equality

The conversation on gender mainstreaming to mobilize efforts on gender equality and reduction of discriminatory gender practices and social norms has gained currency as an intellectual concern, technical solution and international consensus. However, the discursive landscape of gender equality has shaped and reconfigured what gender mainstreaming could potentially achieve in different contexts, particularly – the vision of equality as sameness, which aspires to a gender-neutral world where women are treated according to the same principles, standards and norms as men, enjoying equal rights and opportunities; and, the approach of difference or reversal, which problematizes the existence of unquestioned patriarchal norms, reconstructing the political by seeking recognition of non-hegemonic gendered identities that have been treated as different in comparison to male normative identities and cultures.92

This Gender Mainstreaming Strategy adopts the latter transformative approach ('the approach of difference or reversal'), positing a gender equality vision for the MedProgramme that questions established categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is

---

therefore not an end (goal) of the MedProgramme– rather, a means (process) to an end. This approach reflects also the normative standards defined by the European Institute for Gender Equality (EIGE), which stipulates the importance of identifying gender mainstreaming as a process because it:

“Ensures that policy-making and legislative work is of higher quality and has a greater relevance for society, because it makes policies respond more effectively to the needs of all citizens – women and men, girls and boys. Gender mainstreaming makes public interventions more effective and ensures that inequalities are not perpetuated.

It does not only aim to avoid the creation or reinforcement of inequalities, which can have adverse effects on both women and men. It also implies analyzing the existing situation, with the purpose of identifying inequalities, and developing policies which aim to redress these inequalities, and undo the mechanisms that caused them.”

5.2 Targets and Components of the MedProgramme’s Gender Strategy

Based on the above conceptual hinterland, this Strategy has identified three targets, that the eight Child Projects will address through their tailored assessments and action plans (Section 6):

a. Address gender-blind hurdles with gender-differentiated consequences.

Although formal gender equality rights and guarantees are almost ubiquitous in the Mediterranean nations, this Strategy recognizes that gender-neutral policy language may not result in gender-egalitarian outcomes, when implemented in a gendered environment, influenced by gender imbalances and biases. The neutral policies and laws, which are veritably gender-blind, often work in concert with social tenets, traditional norms, constitutional interpretations, and cultural expectations in ways that may stymie the advancement of gender-responsive practices. Thus, in tandem with country partners and implementing agencies, the MedProgramme will stipulate the analysis of potential gender-neutral hurdles in project- and site-specific contexts to develop targeted action towards addressing the gender-differentiated consequences.

**BOX 1: Female entrepreneurship in Mediterranean faces gender-blind hurdles.**

The World Bank reports that seemingly gender-neutral barriers such as cumbersome and costly procedures for opening a business and uncertain chances of recovering assets from a failed venture often have gender-differentiated consequences, notably deterring women’s entrepreneurship in the Mediterranean region. Thus, gender-neutral laws, when implemented and interpreted in gendered contexts, often create ambiguities and unintended consequences for the disadvantaged. This also relates to legal inconsistencies and opaqueness afforded to gender-neutral policy language and laws by the fluid interpretation and precedence given to family law and measures, which are often derived from traditional sociocultural norms.

*Source: The Environment for Women’s Entrepreneurship in the Middle East and North Africa. The World Bank. (2008).*

---

93 See Good Practices in Gender Mainstreaming, a technical guide by EIGE.
b. **Mitigate gender-specific barriers and discriminatory norms.**

Certain barriers and discriminatory norms are framed with gender-specificity, targeting one gender or more, against normative ideals that stipulate hegemonic social identities. Gender-specific barriers have tangible and invisible discriminatory outcomes, prejudices and stigma, and are often accepted, condoned and tolerated within the larger social framework. To address these barriers, attention, awareness and resources must be accorded to address the effects of the multiplicity of social differences and gender norms to usher in enduring change and assuage the gender burdens on specific demographic groups. The MedProgramme will, hence, develop dedicated project- and country-specific gender assessments and gender action plans for each of its constituent projects and from the preparation phase through to the concluding monitoring and evaluation stage of the project cycle, with objectives (relating to broader project objectives), transformative outcomes (relating to the wider focus of the project), means of verification and indicators.

**BOX 2: Labor participation has gender-specific barriers in the Mediterranean.**

The Union for the Mediterranean, on the occasion of its Ministerial Conference in Barcelona (2015), brought the focus on the importance of fostering women’s participation in economic life and on its obstacles in the region: women’s low presence in paid labor, low wages – with lower wages of 10 – 40%, and a low level of access to positions of responsibility and decision-making. These gender-specific barriers are exacerbated by the current unequal share of care, domestic and reproductive unpaid labor performed by women in the Mediterranean. Women also face discrimination, violence and legal inequalities, which impede their ability to leverage opportunities towards empowerment and independence.

*Source: Visions and Actions to Promote Gender Equality in the Mediterranean. The Union for the Mediterranean. (2017).*

c. **Scale up gender-sensitive policies and deliver gender-responsive outcomes.**

Building on the knowledge and analysis of gender-blind and gender-specific barriers, the MedProgramme will have the imperative to use consultative and participatory tools to conduct gender-differentiated beneficiary assessments and formulate gender-sensitive policies to address the same. These gender-sensitive policies will provide the basis for gender-responsive outcomes within the results framework of the different projects, by bringing transformative change towards: promoting equitable access to goods, services, status, and decision-making power (both within policy institutions and households); expanding the subjective and objective range of legal, social and psychological choices available to both men and women; breaking gender stereotypes, norms and patterns; and, providing the conducive environment, through capacity-building in policy institutions, governance structures and local bodies and awareness-raising among communities (particularly, male sensitization), for a pan-Mediterranean gender mainstreaming effort that is verifiable on all three accounts of accountability, transparency and incentive mechanisms.

To scale up and deliver these policies and actions, the MedProgramme will stipulate gender-budget lines within the constituent projects, as dedicated resources need to be mobilized for positive impacts on the gender gap in the region.

5.3 **Visualization of the MedProgramme’s Gender Strategy**

Based their justification and review of peer examples, this Strategy has identified the following components for the MedProgramme’s gender targets, which reflect the types of actions that will be implemented by the Child Projects, visualized below:

*Please see visual from p.14.*
<table>
<thead>
<tr>

</table>

| **Mitigate Gender-Specific Barriers and Discriminatory Norms** |
| Identify gender-discriminatory barriers to programme outcomes and address them within project results |
| Provide access to policy and planning towards more inclusive environmental governance, resilience strategies |
| Liaise with local and national stakeholders on reform advocacy |

| **Scale Up Gender-Sensitive Policies & Deliver Gender-Responsive Outcomes** |
| Earmark resources (gender-budgeting) and implement tailored and targeted action points to translate gender rhetoric into verifiable outcomes |
| Build up gender-related assets and capacities (such as local women’s groups and their inclusion in policy negotiations and management strategies) |
| Dedicate resources towards monitoring and evaluation of gender results, gender-disaggregated and socioeconomic data, best practices and lessons learnt for future interventions |
Devising a gender mainstreaming strategy denotes only the very outset of a multi-stage policy cycle that requires consistent efforts of integration and consideration of gender perspectives, in each phase of the program and by all actors involved, to succeed. To operationalize the Strategy, therefore, three necessary elements (‘MED’ – 5.1) have to be present and inform the different stages of execution, even if the content changes in real time to adequately meet the necessities of project- and site-specific contexts for the different Child Projects, as described below. Further, a map (5.2) is presented of how the MED Gender Mainstreaming approach is expected to function.

6.1 Defining the MED Approach

The approach to be used to operationalize the Strategy is defined below:

a. Multidimensional.
A multidimensional approach ensures that gender is used as a principal analytical category – however not without context or functioning in a void. Linkages between gender, poverty, environmental justice, socioeconomic inclusion, ethnic diversity and customary practices must be identified, analyzed and considered in the formulation of inclusive environmental action and policy. Child Projects, hence, will have the autonomy to identify gender issues relevant to the project objectives and outcomes (gender assessments), and devise strategic as well as appropriate gender action plans to address these.

b. Empowering
Integrating empowerment as an operational imperative ensures that program objectives and technical components are geared towards environmental and socioeconomic co-benefits. This is necessary to convert gender-aware rhetoric and gender-responsive analysis into actionable points within project logframes (logical frameworks), and with dedicated resource allocation (gender-budgeting) – which have positive ramifications for the gender status quo in project-specific contexts both nationally and locally. Child Projects, hence, will ensure gender assessments and action plans dovetail with the locale of project activities, stakeholders involved, and ensure budgetary allocations to translate rhetoric towards actions with verifiable results.

c. Durable.
Durability is the hallmark of a successful strategy/ intervention/project or program. Gender-responsive actions must ensure a shelf life beyond the duration of the project cycle, with positive uptake among national and local stakeholders. Directing investment towards institutional and technical capacity-building, and ensuring ownership of project by stakeholders, will warrant exit strategies for the different Child Projects. Particularly, it will be a program-wide imperative to generate information and data on the linkages between environmental security, climate risks and gender specifically on the Mediterranean region – while, building up capacities of national and local stakeholders to address these in a holistic manner, beyond the duration of the project cycle.

Please see the visualization of the MED approach – and what it entails for Child Projects and the overall MedProgramme below on p.36.
6.2 Mapping the Programme-wide MED Approach with Child Projects

Having defined the guiding tenets of Program-wide gender mainstreaming to be devolved for each Child Project, the map (presented as a visual) of how this Strategy will tentatively be operationalized is presented below:

a. Preparation Phase – Child Projects identify gender priorities and actions through Gender Assessments

The MED approach of this Gender Mainstreaming Strategy for the MedProgramme will allow for considerable autonomy, as Child Projects will conduct their own gender assessments. The process of conducting a successful gender assessment includes: identifying the gender directives from the GEF focal point of the Child Project, as well UN Environment’s gender priorities with regard to the Child Project thematic; desk-reviews of available literature on the theme from – gender, social development, and political risk perspectives; collating relevant data for the gender considerations from international organizations, development banks, national authorities, and think tanks (economic development-focused); structuring a potential baseline upon which the Child Project can positively impact; and finally, gathering information on relevant gender stakeholders (ministries, independent activist groups, NGOs) and legal mechanisms (gender-progressive laws) who could participate during the implementation phase.

b. Preparation Phase – Child Projects develop Gender Action Plans based on assessments

The individual gender assessments conducted by each Child Project will form the basis for the development of a tailored and strategic Gender Action Plan, which will mainstream action points to positively impact upon the gender status quo under the broader project objective, outcomes and activities, as well develop means of verification indicators to measure progress to impacts at later stages. This will ensure that Child Projects are able to cater to their specific gender priorities and issues, pertaining to country- and site-specific contexts, and address them in holistic manner through their activities. Further, such an
approach will avoid the perils of establishing a ‘one-size-fits-all’ approach for the MedProgramme, and allow for a nuanced and focused mainstreaming effort spanning the different Child Projects.

c. **Inception and Implementation Phase – Child Projects will plan the execution of action points identified in the Action Plans**

   Operationalizing the Action Plans will involve meticulous planning, as well as resource allocation. As the Child Projects move into the inception phase and ground realities of project implementation take shape – the execution of the action points with dedicated gender budgeting will guarantee that the gender rhetoric moves towards practical and verifiable results within the broader project objectives and outcomes. The steady maintenance of momentum of gender mainstreaming, at this stage, is very crucial – and, will require concerted efforts from different actors within Child Projects to ensure gender stakeholders are engaged, capacity and consensus are mobilized, and resources are used to target beneficiaries to leverage both socioeconomic and environmental co-benefits.

d. **Throughout the Project Cycle – Child Project 4.1**

   This Gender Mainstreaming Strategy, intended to structure gender-responsive activities and to provide a coherent mainstreaming methodology, will be included as one of the three pillars of the Child Project 4.1 – the support project providing also the knowledge management and coordination pillars to the entire MedProgramme. This gives the Child Project 4.1 a unique position: at once, while providing a gender support structure to the pan-MedProgramme portfolio, it will also provide a platform for ‘cross-fertilization’ by pooling in gender-relevant research and data (from the different Child Projects) to facilitate Programme-wide learning and exchange.

e. **Reporting and Monitoring – Child Projects align gender results with indicators/develop gender-specific indicators**

   In keeping with the durability aspect of the MED approach – it is crucial to ensure a prolonged shelf life of the MedProgramme interventions. A step towards this begins in the inception and implementation phase by building capacity and consensus, while mobilizing adequate resources. Going into the reporting and monitoring stages, it will be important for Child Projects to measure progress to impacts against gender-specific indicators that are developed in the Gender Action Plans (in line with GEF gender indicators), to collate Programme-wide gender information and data, and report accordingly. This will also lay the ground for a potential ‘extension’ of the Gender Mainstreaming Strategy through future interventions – by ensuring these can benefit from the gender-responsive actions, policies and capacity building done in the region, and by expanding the entry points these new projects can take with the information and data generated towards cross-cutting issues such as poverty, water access, land and infrastructure etc.
7. Conclusion

This Strategy has stipulated the MedProgramme’s gender priorities, targets and components, as well as the operationalizing approach towards achieving the same. The focus has been to usher a change and/or reversal perspective and posit a gender equality vision for the MedProgramme that hopes to question established social and gendered categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is therefore not an end (goal) of the MedProgramme—rather, a means (process) to an end (greater gender equality).

With international consensus, national priorities and organizational efforts (of the GEF and UN Environment – see 1.2) prioritizing gender mainstreaming as a solution to greater stakeholder involvement, improved environmental results and social outcomes of projects, and ensure inclusivity. In this milieu, this Strategy will generate regional cooperation and contribute to the pan-Mediterranean conversation on the importance of greater gender equality for the overall progress of society, improvement of economy and functioning of a healthy polity.
ANNEX R

Reports of the stakeholder consultations

(ATTACHED HEREWITH)
The Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security

Report of the First Regional Consultation

Athens, Greece
7 – 8 March 2018

Final version 20 April 2018
Conclusions

1. The GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia took note of the progress achieved on the preparation of the Child Projects and validated the proposed activities, the sites chosen for their execution at national level and the timelines for the submission of the Child Projects to the GEF Secretariat for CEO endorsement.

2. The implementing and executing partners agreed to evaluate the feasibility of the specific requests of the countries for additional activities (namely those of Algeria under Child Project 2.1 and Bosnia and Herzegovina and Montenegro under Child Projects 1.1 and 1.3).

3. UN Environment/MAP committed to keep the GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia fully informed of the progress on the development of the Child Projects and to provide the advanced versions of the project documents for comments at the appropriate time to the GEF Operational Focal Points and the country’s nominated national thematic experts, if any.

4. The GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia committed to coordinate the gathering of comments from competent national institutions and thematic experts, and to provide UN Environment/MAP with a single set of official comments.

5. Regarding the letters of co-financing, the GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia expressed their preference for a single letter detailing the co-financing contributions for each of the Child Projects of the MedProgramme. The UN Environment / GEF Task Managers for International Waters (IW) and Chemicals and Waste (CW) agreed to seek guidance from the GEF Secretariat and to inform them about how to proceed.

6. The implementing and executing partners and the GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia agreed to take the necessary steps to ensure effective coordination with their respective counterparts in the programme (interministerial bodies, stakeholder groups, etc).

7. UN Environment/MAP took due note of the countries’ call to ensure effective coordination among all Child Projects and to consider as much as possible cross-cutting issues like climate change and biodiversity.
Next steps

1. UN Environment/MAP will provide the GEF Operational Focal Points with:
   a. an overview of the national and regional activities of the MedProgramme foreseen in each of the participating countries.
   b. a responsibility matrix indicating the executing structure for each Child Project, including the implementing and executing partners and their respective roles.
   c. the contact information for each of the implementing and executing partners.
   d. clear indications about how to proceed with the preparation of co-financing letters including a template.
   e. an overview of the national stakeholders engaged during the development of the project documents.

   (Note: Items a, b and c will be submitted with the final meeting report of the First Regional Consultation. Items d and e will be provided in due course.)

2. The GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia will provide UN Environment/MAP with:
   a. a list of national thematic experts including specific focal points for IW and CW to whom the advanced draft of the project documents will be sent for comments.
   b. co-financing letters from any relevant national partners, including supporting coordination for combined letters across different child projects as needed.

3. The technical execution partners will support the GEF Operational Focal Points and national focal points in the identification of relevant initiatives which can contribute to the co-financing support by countries. They will also provide UN Environment/ MAP with their own organizational co-financing letters.
**Background information**

1. The objective of the MedProgramme is to accelerate the implementation of agreed upon priority actions to reduce the major transboundary environmental stresses affecting the Mediterranean Sea and its coastal areas while strengthening climate resilience and water security, and improving the health and livelihoods of coastal populations. The MedProgramme was endorsed by the GEF Council in October 2016 and is comprised of seven Child Projects which will contribute to the GEF’s focal areas of International Waters (IW), Chemicals and Waste (CW), and Biodiversity (BD) (Table 1). Nine countries have endorsed the MedProgramme: Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro, Morocco, and Tunisia. It will be executed over a period of six years starting in 2019.

2. The First Regional Consultation for the MedProgramme was convened by UN Environment/MAP to bring together the participating countries and the implementing and executing agencies to: (i) take stock of progress on the development of the Child Projects; (ii) discuss next steps for completion of the submission package, including letters of co-financing; and (iii) agree upon a timeline for the submission of documents to the GEF Secretariat. The agenda of the consultation is provided in Annex 1.

Attendance

3. The regional consultation brought together 40 participants, including representatives from eight of the nine countries that endorsed the MedProgramme and all seven of the implementing and executing agencies. The complete list of participants is set forth in Annex 2.

4. The names, titles and affiliations of the GEF Operational Focal Points of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Montenegro, Morocco and Tunisia and their nominated representatives that participated in the regional consultation are provided in Table 2. It should be noted that the GEF Operational Focal Point of Libya, Mr. Mustafa Soliman, confirmed his wish to attend the consultation, but was unable to do so as a result of difficulties encountered in the organization of his travel by UN Environment/MAP.

* GEF Operational Focal Point
Presentations

5. Presentations were delivered for each of the MedProgramme’s seven Child Projects and the GEF Special Climate Change Fund (SCCF) Project, in addition to three presentations on the development process for the MedProgramme. The present report does not attempt to summarize these presentations, but focuses rather on the discussions they prompted.

6. All of the presentations delivered during the regional consultation are available at: https://www.dropbox.com/sh/zp1kqx6jl9ss8jk/AAD-1U2ik3rfHt5RK0kKza6Za?dl=0.

Welcoming remarks and initial discussions

7. Mr. Lorenzo Galbiati, UN Environment/MAP Secretariat (hereafter the Secretariat), welcomed the participants to Athens on behalf of the Coordinator of the Barcelona Convention Mr. Gaetano Leone. The Secretariat recalled the 40 year collaboration among the Convention’s Contracting Parties, partners and UN Environment/MAP towards a shared vision for “a healthy Mediterranean with marine and coastal ecosystems that are productive and biologically diverse contributing to sustainable development for the benefit of present and future generations.” The Secretariat observed that the assessments, diagnostics, planning and experimentation carried out during this time had led to a consensus on priority areas for further intervention, and that together, the countries, UN/Environment MAP, the European Investment Bank, UNESCO-IHP, GWP-Med, WWF MedPO and IUCN have responded to this need by developing the Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security. The MedProgramme will support countries by providing a comprehensive response to the provisions of the Barcelona Convention and its Protocols, of other legally binding agreements and other instruments and programmes, among them the Stockholm and Minamata Conventions and the UN Environment Global Programme of Action. The Secretariat reminded participants that the GEF Council approved the MedProgramme at the end of 2016 and will support its execution through grants from the International Waters, Chemicals and Waste and Biodiversity Focal Areas. In conclusion, the Secretariat stated that the focus of the regional consultation was to update the countries on the status of the development of the MedProgramme and to agree together on the next steps to complete the process.

8. Participants were also welcomed by the MedProgramme’s two implementing agencies: UN Environment and the European Bank for Reconstruction and Development (EBRD).

9. Mr. Yegor Volovic, the UN Environment GEF Task Manager for International Waters (IW), recalled the longstanding collaboration among GEF and the countries in the region, through the Barcelona Convention (for the Mediterranean Sea) and the Bucharest Convention (for the Black Sea). He also noted the forward-thinking vision of the MedProgramme (approved under GEF-6) which has environment security as its focus, a theme that is now well-established in GEF-7.

10. Ms. Eloise Touni, the UN Environment GEF Task Manager for Chemicals and Waste (CW), spoke about the multi-focal area approach of the MedProgramme and explained that this will be the GEF’s strategy going forward. She explained that the GEF’s activities on CW in the MedProgramme would support countries in efforts to meet obligations for POPs and mercury under the Stockholm, Basel and Minamata Conventions.

11. Ms. Dana Kupova, Principal of Resource Efficiency Investments at EBRD, explained EBRD’s 10 year collaboration with the GEF Secretariat, which to present has focused on climate change
adaptation and mitigation, and expressed her positive anticipation about expanding the Bank’s activities to the IW and CW focal areas.

12. The Secretariat reviewed the agenda of the consultation with participants and briefly outlined the desired outcomes of the two-day event.

13. The representatives of several countries (Bosnia and Herzegovina, Egypt and Lebanon) asked for clarification on the modality for execution of activities at the national level. The Secretariat first clarified the distinction between GEF implementing and executing agencies. Implementing agencies of the GEF are responsible for delivering project proposals to the GEF Secretariat and liaising with the Secretariat and countries at the GEF Council, in addition to providing general oversight and quality control. Executing agencies of GEF projects are responsible for carrying out project preparation and execution of the activities on the ground with national, regional and international organizations, as appropriate, to achieve the expected results of the project. For the MedProgramme, the two implementing agencies are UN Environment and EBRD, and the seven executing agencies are UN Environment/MAP, EIB, EBRD, UNESCO-IHP, GWP-Med, IUCN and WWF-Med.

14. The Secretariat added that activities would be executed at the national level through a variety of arrangements, including through UN Environment’s Regional Activity Centres (RACs), through international organizations like UNESCO, WWF and GWP-Med, and through other execution modalities. The Secretariat informed the participants that consultations organized with the countries to date on individual Child Projects (Annex 3) had clarified these arrangements in a number of cases and that future consultations would provide further opportunities to do so. Ultimately, it is up to the participating countries to express their wishes on the best approach to executing activities at the national level, in a manner that is compatible with the rules and regulations of the GEF Secretariat and the executing UN agencies, as well as the available resources for each Child Project.

15. In response to a question about the need to reflect emerging issues in the MedProgramme, the partners explained that GEF funds are earmarked for specific priority areas. For example, the issue of marine litter was not eligible under GEF-6 and was therefore not reflected in the MedProgramme. The issue of marine litter nevertheless will be tackled in the region thanks to complementary initiatives of the MAP system, and will furthermore be eligible under GEF-7. The UN Environment GEF Task Manager for IW reminded the participants that Mediterranean countries express their priorities on environmental issues via three consultative bodies (the UN Environment Assembly, the GEF Council and the Barcelona Convention) and on chemical-specific issues via their participation as Contracting Parties to the Stockholm and Minamata Conventions.

16. Mr. Esef Husic, Acting General Director for Climate Change and Mediterranean Affairs of Montenegro, also intervened to greet the participants of the meeting on behalf of the Ministry of Sustainable Development and Tourism of Montenegro and Mr. Igor Gradjevic, the GEF Operational Focal Point of Montenegro. He pointed out the positive experience of Montenegro during implementation of the MedPartnership and reminded of the exceptional results achieved in that process such as the preparation and adoption of the National Strategy for Integrated Coastal Zone Management (NS ICZM), preparation of the Integrated Resources Management Plan (IRMP) for the Buna/Bojana Area, vulnerability assessment of the coastal area to climate change including the sea-level rise, and the mapping of the valuable coastal habitats, etc. On the basis of these results and in line with NS ICZM, and the National Action Plan (NAP) for the implementation of the LBS Protocol and NAP for protection of the coastal biodiversity, Montenegro reiterated its priorities for the MedProgramme, including:

- Disposal of harmful waste containing PCBs and remediation of the hotspots, in the framework of the Child project 1.1 and in synergy, if possible, with Child project 1.2;
- Preparation of the local plans which mainstream the adaptation measures to climate change as part of the SCCF Project;
- Realization of priorities determined in the IRMP for the Buna/Bojana Area related to mapping of vulnerability of groundwater, identification of the level of pollution of the groundwater in aquifers, and establishment of the regular monitoring of groundwater together with their baseline assessment.

Day 1 Agenda Item 1: Setting the scene and objectives of the consultation

17. The Secretariat emphasized that the MedProgramme was designed to accelerate the implementation of agreed actions identified from a series of transboundary diagnostic analyses of the Mediterranean Sea and subsequent strategic action programmes (SAP-MED and SAP-BIO) elaborated in the context of the Barcelona Convention at the request of its Contracting Parties. The MedProgramme is a direct contribution to the implementation of the UN Environment/MAP’s Mid-term Strategy 2016 – 2021.

Day 1 Agenda Item 2: Report on progress for preparation of the MedProgramme documents

18. The Secretariat provided an update on the status of the logframes and project documents for each of the Child Projects and the SCCF Project (Table 3)

Table 3 Status of the logframes and project documents for the MedProgramme and the SCCF Project

20. The representative from Egypt congratulated the partners on the progress achieved towards preparation of the MedProgramme, and expressed his view that biodiversity and climate change were not adequately addressed in the planned activities. The Secretariat explained that the MedProgramme reflected the GEF Council’s priorities and was funded primarily with earmarked funds from the IW and CW focal areas, but that these issues were being addressed through complementary activities in the region. For biodiversity, this includes the MED MPA Project, the 2020 MPA Roadmap, and the technical support activities of SPA/RAC; and for climate change, this includes a variety of GEF interventions, including the Special Climate
Change Fund Project that will address climate change adaptation in six Mediterranean countries. The Secretariat acknowledged that the MedProgramme cannot address every issue, and for this reason it was better to focus on priority areas to achieve greater impacts. The UN Environment GEF Task Manager for IW offered to work with the countries to develop medium-sized projects to address other priorities, as this type of project can be approved faster than full-size projects or programmes.

21. The representative of SPA/RAC thanked the representative of Egypt for drawing attention to the need to strengthen efforts to protect biodiversity in the region, and noted that many other countries have raised this point in other contexts. In the opinion of the representative of SPA/RAC, this is a sign that the GEF Secretariat needs to consider including a regional biodiversity component in all regional projects/programmes, in view of its link to other areas including pollution and coastal zone management. The representative of SPA/RAC asked UN Environment to consider approaching the GEF Secretariat on this issue. The UN Environment GEF Task Manager for IW indicated that there were good opportunities for this in GEF-7 since its priorities include the blue economy and marine biodiversity, and that IW was a good entry point for transboundary MPAs, for example.

22. The representative of Morocco, speaking about her experience in the preparation of the Child Projects of the MedProgramme and the SCCF Project, pointed out that there is a need for the country to nominate a specific focal point for each of the projects, since the GEF Operational Focal Point and the MAP Focal Point (the same person in this case) cannot manage the entire portfolio of projects. The Secretariat suggested that each country could have a national focal point for each specific technical issue and that these focal points could be consulted (along with the GEF Operational Focal Point) when needed and invited to attend steering committee meetings for the projects that fall under their area of expertise. The UN Environment GEF Task Manager for IW agreed that each country needed specific focal points for the various projects.

**Day 1 Agenda Item 3: Next steps and timeline for submission of documents to the GEF Secretariat**

23. The Secretariat described the next steps for completion of the project documents, including the gathering of additional baseline information, organization of national consultations, preparation of co-financing letters, and validation of project documents by the GEF Operational Focal Points.

24. The Secretariat then presented the tentative timeline for submission of the project documents to the GEF Secretariat (Table 4).

<table>

25. The Secretariat recalled that each country would need to indicate clearly the different co-financing contributions for each of the relevant Child Projects, and that these contributions would be monitored on an annual basis. Furthermore, the modality for the preparation of co-financing letters in the context of a programmatic approach needs to be discussed with the GEF Secretariat, considering that normally one co-financing letter would be required per project per country (the MedProgramme would require more than 50 co-financing letters under this arrangement). There is clearly a need to simplify this process for the MedProgramme. The UN Environment IW Task Manager agreed to liaise with the GEF Secretariat to clarify this issue and propose an acceptable solution.

Day 1 Agenda Item 4: Child Project 1.1

26. Child Project 1.1 will be executed by UN Environment/MAP, in coordination between MED POL and two of UN Environment/MAP’s Regional Activities Centres – SCP/RAC and Plan Bleu. The project is expected to deliver the following main outcomes:

- In coastal hot spots, measurable reduction of wastes and hazardous chemicals (POPs, mercury) impacting human health and coastal habitats is achieved;
- Update of the baseline situation (TDA), harmonization of monitoring protocols, methodologies and procedures in compliance with Integrated Monitoring and Assessment Programme (IMAP) of the Barcelona Convention, including design of offshore reference network and gender assessment.

27. The discussion ensuing the project’s presentation by the representatives of MED POL and SCP/RAC touched upon various aspects, including requests for clarifications on the selection of countries, sites and options prioritized in the preliminary proposal for disposal (POPs/PCBs and mercury) activities. Another important question raised by the participating countries was about coordination between various implementing/executing agencies within MedProgramme as well as with other implementing agencies of related (GEF-funded or not) projects.

28. The representative from Montenegro highlighted the need for cooperation and coordination between Child Projects 1.1 and 1.3 to address national priorities, including contaminated sediments at the former shipyard Bijela (categorized as the hot spot B in the Barcelona Convention National Action Plan – NAP) and provision of incentives to phase out in use PCBs in the aluminum plant in Podgorica. Furthermore, country missions were called for in order to discuss matters in greater detail. The need for coordination with the GEF-UNDP project for safe removal of PCBs was also highlighted.

29. The Secretariat explained that a partner coordination meeting would follow the two-day country consultations to address, among other things, specific issues raised by Montenegro. Missions to countries would be planned based on the partners’ meeting discussions. The Secretariat emphasized the need for cooperation within the MedProgramme and with sister agencies, while avoiding double-counting and overlapping between different activities. The representative of UN Environment/MAP - MED POL reminded that endorsement letters for the PCBs management were issued by Montenegrin authorities to both UN Environment/MAP and UNDP. Missions to countries (possibly joint for Child Projects 1.1 and 1.3) could take place in April 2018, to be facilitated by national authorities.

30. The representative of Bosnia and Herzegovina informed of the progress with preparation of the mercury initial assessment (MIA) and pointed out two locations where pronounced mercury contamination problems were identified. A plea was made to include Bosnia and
Herzegovina in the MedProgramme mercury removal activities. The representative of UN Environment/MAP - MED POL explained the reasons for not including Tuzla site in the preliminary plan for mercury disposal under Child Project 1.1, including its location (far outside the Mediterranean watershed) and the fact it was not addressed in the country’s NAP, as well as MED POL Focal Point’s confirmation of these facts. The representative of Bosnia and Herzegovina was invited to provide the MED POL with the MIA report.

31. The Secretariat considered that the feasibility of inclusion of the sites outside the Mediterranean watershed should be checked with the GEF Secretariat. The UN Environment GEF Task Manager for CW emphasized the importance of the national priorities (as identified in the relevant plans prepared under the Stockholm and Minamata Conventions) for the development of the MedProgramme interventions and welcomed more detailed proposals by the countries. A reference was made to Child Project 1.1 presentation on new POPs prevention opportunities and a recommendation was made to ascertain that calculations of any quantities to be offset through project interventions were acceptable to GEF Secretariat.

32. The representative of Lebanon expressed an agreement with presented criteria for preliminary selection of countries and sites for Child Project 1.1 disposal interventions and enquired about inclusion of specific locations and disposal options for Lebanon. As regards new POPs and mercury prevention, ideas were exchanged on how to validate the baseline data; working with lamps containing mercury was singled out as a viable prevention (and disposal) option.

33. The representative of Tunisia endorsed in principle the national activities included in the preliminary plan/presentation for Child 1.1 (as well as for Child Project 1.2), emphasizing at the same time the need for assistance with remediation of POPs/PCBs contaminated sites in the country.

34. The representative of Morocco pointed out the use of the PCBs management platform located in Casablanca could lower disposal costs for the proposed activities (compared to exports to the EU).

**Day 1 Agenda Item 5: Child Project 1.2**

35. European Investment Bank (EIB) is the main executing agency for the Child 1.2 project, with a contribution from UN Environment/MAP for the regional level activities (development of standards). The following main results are planned to be achieved through the project’s components that will be executed by the EIB:

- Reduction of organic pollution reaching the Mediterranean Sea causing coastal ecosystem degradation;
- Depollution and water resources management at the level of catchments which are draining into the Mediterranean, in order to improve the human, environmental and health situation and reduce the contaminants loads entering the Mediterranean Sea;
- Reduction and control of chemical and organic pollution from past and present industrial activities in coastal areas impacting human health and livelihoods, and coastal ecosystems, thereby reducing pollution discharges to the Mediterranean Sea;
- Preparation of pre-investment studies for mercury decontamination and conversion of industrial processes.
36. Under Child Project 1.2 project, a 7 million USD GEF grant\(^1\) will be utilized to support preparation of investments and strengthen capacities needed to reduce pollution in the Mediterranean hot spots. In the course of the preparation of the programme framework document (PFD), Child Project 1.2 was projected to mobilize up to 500 million USD in co-financing. The representative of EIB presented specific sites and type of interventions considered for technical assistance under the GEF grant, including three projects in Egypt (wastewater treatment plants - WWTPs - and drains depollution), upgrade of a wastewater collection and treatment system (for the city of Tripoli) in Lebanon, upgrade of 10 WWTPs in Tunisia, and mercury depollution projects in Morocco and Tunisia. Following the EIB’s presentation, the Secretariat asked whether the initially identified co-financing amount was still applicable.

37. The representative of EIB explained the background to the selection of areas of work presented at the meeting, including linkages to the Horizon 2020 goal of depolluting the Mediterranean and the pipeline of projects identified through the EU-funded Mediterranean Hot Spots Investment Programme (MeHSIP), the latter serving as the starting point for identification of specific projects to be developed through Child Project 1.2. The Barcelona Convention NAPs were also used as references, in particular for identification of hot spots (and in some instances for consideration/ cross-checking of specific projects). The representative of EIB reported that the co-financing is currently assessed at the level of 510 – 550 million USD, depending on bankability of the projects to be developed and willingness of the countries/ project promoters to borrow to implement specific interventions. Without the bankability of the selected projects, and the willingness of the countries to borrow, the co-financing would be not possible.

38. The representative of Lebanon raised a question on the possibility to add Saida WWTP and other projects (referring to reuse of treated wastewater and aquifer recharge) identified by national stakeholders to the MedProgramme/Child Project 1.2 selection process. The representative of EIB explained the selection started from the MeHSIP approved list of 24 projects and that there were delays in signing the cooperation agreement with Lebanon. Nevertheless, the Bank remains open for proposals of other projects for Lebanon (including Saida WWTP) provided that eligibility criteria are met.

39. The representative of Tunisia asked for clarification on the GEF grant funding for the MedProgramme Component 1 projects versus loans planned for specific projects implementation. UN Environment/MAP clarified the loan component (shown in the approved PFD as the Child Project 1.2 co-financing) referred to hard loans/ EIB funding to be approved for mature projects while as the in-kind portion of the total Child Project 1.2 co-financing referred to the share of the EC funds extended for the same purpose. The representative of Tunisia confirmed that the national projects (upgrade of 10 WWTPs in different regions, mercury depollution at SNCPA plant in Kasserine) considered under the Child Project 1.2 were in line with the national priorities, as outlined in the country’s NAP and mercury initial assessment/ action plan.

40. The UN Environment/MAP - MED POL presented its work on Child Project 1.2 related to the outcome on standards, i.e. development of common environmental standards for desalination, aquaculture and wastewater treatment. The intent is to develop, in the course of Child Project 1.1 implementation, a set of regional standards to enable better regulation (including eventual adoption of the new/updated Regional Plans) of activities and sectors where the gaps in the Barcelona Convention’s regional measures to achieve Good Environmental Status (GES) in the Mediterranean have been identified.

---

\(^1\) Five million USD from International Waters Focal Area and 2 million USD from Chemicals and Waste.
41. The interventions of the representatives from Lebanon and Egypt emphasized the existence of strong national standards in some of the areas that will be subject to standards development and the sensitivities/difficulties with adoption of regional ones (including the need for regional standards to be tuned with national ones). For wastewater and sludge management, preparation of guidelines was seen as more pertinent than the development of standards. The need to mobilize and use all the existing technical knowledge in the region in the course of implementing this set of regional activities was recommended.

42. The representative of UN Environment/MAP - MED POL reiterated the development of standards was planned for the areas where the existing regional/Barcelona Convention measures were assessed as insufficient to reach the GES. The outputs of the Child Project 1.2 activities will feed into the process of updating the existing and/or developing new Barcelona Convention Regional Plans, whereas the decision making process will be fully conducted in line with standard procedures of the Convention and its governing bodies. The work on the development of standards and new/updated Regional Plan is integrated in the UN Environment/MAP Programme of Work for the current biennium.

43. The representative of WWF pointed out the new INTERREG project implemented by WWF France (including work on aquaculture) should be consulted in the course of development of aquaculture standards.

Day 1 Agenda Item 6: Child Project 1.3

44. As the GEF Implementing Agency, the EBRD is leading on the preparation of Child Project 1.3 which will produce the following outcomes:

- Public/private investments enable pollution reduction in priority coastal and catchment areas through the improvement of water and waste water management systems and the introduction of modern and efficient technologies and practices;
- Prevention or elimination of POPs.

45. Compared to Child Projects 1.1 and 1.2, preparation and implementation of the Child Project 1.3 has certain specificities due to the EBRD’s different work approaches. The focus will be on municipalities and on private sector, with a dynamic project pipeline identified based on project selection criteria. The IW component of the project will focus primarily at municipal wastewater treatment projects. The areas of interest for the CW component (POPs elimination) will be electricity distribution companies, industries (where POPs/PCBs disposal and prevention activities are likely to be linked to larger modernization loans/packages) and potentially agri-business (for possible substitution and disposal of POPs pesticides that are still in use). Due to the dynamic nature of developing the project pipeline, sites and companies (potential beneficiaries of the project), will not be known at this stage, and the Bank’s internal rules limit options for their disclosure to third parties.

46. The representative of Montenegro pointed out that no information on the Child Project 1.3 development activities had been received by the country so far and expressed interest/need to hold consultations and learn more about the scope of work of the consultants conducting pertinent assessments for the EBRD. A similar intervention was made by the representative of Albania, emphasizing the need to meet the consultants and discuss priorities with them. The representative of Bosnia and Herzegovina highlighted the need for more detailed discussion as regards prevention of new POPs, and suggested the Child Project 1.1 and Child Project 1.3 activities should be combined. In addressing these interventions, the representative of EBRD explained the work conducted so far was aiming to generate a
snapshot of the countries’ situation and that the National Implementation Plans (NIPs) for the Stockholm Convention have been analyzed. Based on these analyses, project selection criteria would be defined and project pipeline built.

47. The representative of EBRD explained the GEF funding would be used for technical assistance (including project preparation) and potentially for grants to overcome specific market barriers associated with the implementation of environmental technologies. Another potential use of the GEF funds is provision of technical assistance (including project preparation). For the time being, EBRD is not considering use of intermediary banks in the projects’ implementation phase.

48. The representative of Montenegro pointed out the links between Child Projects 1.1 and 1.3 and expressed interest to explore possibilities to address two priority sites (Aluminum plant and former shipyard Bijela) through the MedProgramme and in coordination with the ongoing UNDP and the World Bank projects (the former funded by the GEF, the latter through the World Bank loan). The representative of EBRD took note of the interventions, flagged the two sites as potential Child Project 1.3 project sites, and emphasized the Bank could provide loans for the larger investment interventions while using GEF funds for technical assistance and grants. Further discussions and coordination are necessary to define possible interventions.

49. The representative of Lebanon raised the question about potential overlap concerning what Child Projects 1.1 and 1.3 are aiming to deliver. The Secretariat pointed out the differences in the targets of the two projects while the representative of EBRD highlighted the difference in the funding approaches: for example, potential disposal of PCBs supported through Child Project 1.3 funding would be coupled with the Bank’s loan for new investments leading to improved management of chemicals and wastes.

50. The question of expected submission date of the Child Project 1.3 to the GEF Secretariat was raised. The representative of EBRD explained the process was challenging nevertheless the completion of project preparation phase was planned for mid-summer.

51. The representative of Albania asked for clarification on potential beneficiaries of the projects to be funded through Child Project 1.3. The representative of EBRD explained sovereign lending was not considered for the time being, while as municipal and private sectors were identified as the key potential recipients (municipalities in particular for the IW component and waste water management improvements).

52. Regarding the regional level activities, the representative of EBRD explained the strategy was to ensure that experiences with successful national interventions would be disseminated across the region and potentially replicated in partnership with participating and other companies.

53. The representative of Tunisia emphasized the necessity for coordination between different executing Agencies, since some activities concern three child projects (1.1, 1.2 and 1.3).

Day 2 Agenda Item 2: Child Project 2.1 “Mediterranean Coastal Zones Climate Resilience Water Security and Habitat Protection”

54. Child Project 2.1 will be executed jointly by UN Environment/MAP and two of its RACs (PAP/RAC and Plan Bleu) and by UNESCO-IHP and GWP-Med. The Child Project will achieve the following outcomes:
   - Coastal zone sustainability enhanced through the adoption of comprehensive ICZM strategies, coastal plans and instruments (MedProgramme Outcome 4).
Increased resilience to climate variability and change, and enhanced water security of coastal populations through improved sustainability of services provided by coastal aquifers and by groundwater related coastal habitats (MedProgramme Outcome 5).

55. The representative of Algeria expressed interest in discussing the possibility of Algeria benefitting from national level activities in the context of Child Project 2.1. The Secretariat responded that Algeria had endorsed the MedProgramme in December 2017, when the preparation of Child Project 2.1 was already well advanced. Algeria will benefit from the regional activities foreseen in this Child Project (e.g., training and capacity building including on submarine groundwater discharges, gender and conjunctive management of water resources; awareness raising; support to ICZM Protocol ratification; etc.). The executing partners agreed to evaluate the possibility of accommodating Algeria’s request. However, the representative of UNESCO-IHP expressed concerns about the constraint of the budget available for the MedProgramme Outcome 5 and the risk of jeopardizing the successful implementation of initially foreseen activities by increasing the number of national activities.

56. The representative of Egypt observed that the execution of a project with four partners would be challenging and also pointed out the need to consolidate the monitoring framework for Child Project 2.1. In response, the executing partners first recalled their successful joint execution of activities for the MedPartnership, including the development of the Integrative Methodological Framework (IMF), a practical tool to integrate considerations of integrated coastal zone management, integrated water resources management and groundwater management. This tool will guide the partners in the integration of their individual and joint activities for Child Project 2.1. Next, with respect to monitoring, the executing partners recalled that the project would benefit from an existing monitoring framework established for the Barcelona Convention, including the Integrated Monitoring and Assessment Programme (IMAP) for the achievement of good environmental status in the Mediterranean, and indicators related to implementation of the ICZM Protocol, the Mediterranean Strategy for Sustainable Development, and the ecosystem approach, amongst others. Finally, the Secretariat reminded the participants that one of the objectives of Child Project 4.1 was to ensure the effective coordination among all projects and partners, including through the organization of yearly stocktaking meetings, communication tools such as the MedProgramme website and the establishment of a Programme-wide results monitoring framework.

57. The representative of Montenegro took the opportunity to request assistance on transboundary cooperation with Albania related to Child Project 2.1 and to draw attention to some additional priorities regarding the focus of groundwater activities. First, the representative of Montenegro reminded the participants that the Buna/Bojana area had been officially confirmed as Montenegro’s priority area for Child Project 2.1 and that an integrated resource management plan had been developed for this area in the context of the MedPartnership. A framework agreement between Montenegro and Albania for the sustainable development of Skadar Lake and Buna/Bojana was subsequently drafted and is currently awaiting signature by the two countries. The plan includes the establishment of a joint commission between Montenegro and Albania to support its implementation. In view of this, the representative of Montenegro requested that efforts be made under Child Project 2.1 to support the establishment of the joint commission with Montenegro and Albania, once the agreement has been officially adopted. On a related note, the representative of Montenegro also stated that the integrated resource management plan for the Buna/Bojana area called for the preparation of vulnerability maps for the area’s aquifer as well as monitoring of groundwater parameters. The representative of UNESCO-IHP congratulated the representatives of Montenegro and Albania on their cooperation and confirmed UNESCO’s willingness to work with both countries on the joint commission, and to address the requested
aquifer vulnerability mapping within its activities for Child Project 2.1. UNESCO-IHP highlighted at the same time its concerns about the limitation of available funds.

58. The representative of Morocco recalled the country’s request to monitor hydrographic indicators in the context of Child Project 2.1 and to ensure effective coordination between the activities of Child Project 2.1 on ICZM and those of the SCCF Project on climate change adaptation in the coastal zone. The representative of Morocco also thanked the executing partners for integrating its expressed priorities into the design of the activities for Child Project 2.1.

59. The representative of Tunisia indicated that an official letter documenting the country’s priorities for Child Project 2.1 would soon be transmitted to UN Environment/MAP, and also confirmed that the priorities of Tunisia for this Child Project are: for the aquifer, it is the Ras Jebel coastal aquifer, and for ICZM, the region of coastal area of the Gulf of Monastir and the Kerkennah Archipelago.

60. As at 7 March 2018, official letters expressing priorities for activities under Child Project 2.1 have been received from the GEF Operational Focal Points of Egypt, Morocco and Lebanon.

**Day 2 Agenda Item 3: Child Project 2.2 “Mediterranean Coastal Zones: Managing the Water-Food-Energy and Ecosystem Nexus”**

61. Child Project 2.2 will be executed jointly by UN Environment/MAP and GWP-Med, and will achieve the following outcomes:

- Enhanced water, food, energy and ecosystems integrated governance, security and sharing of benefits;
- Reduced trade-offs among sectors and more balanced competing water uses;
- Sustainability of basin/aquifers and coastal and marine zones as well as supported economic activities and biodiversity.

62. Following an overview of the Child Project, the representative of GWP-Med informed the participants that two sub-regional consultations would be organized in the coming months: one in the Adriatic and one in the MENA region. These consultations will provide ample opportunities for the countries to express their priorities with respect to the planned activities, which include assessments and plans based on the nexus approach.

63. The representative of Albania expressed interest in participating in the activities of this Child Project, provided that the outputs are action-oriented and do not simply involve the elaboration of strategies. The representative of GWP-Med confirmed that the outputs include action plans, but reminded the participants that it was ultimately the country’s responsibility to ensure their implementation.

64. The representative of Lebanon inquired about the possibility of undertaking national level activities of this Child Project in Lebanon. The representative of GWP-Med indicated that this was a possibility, especially in view of the strong synergies that could be achieved with the activities foreseen in Lebanon for Child Project 2.1, including sustainable management of the Damour aquifer and the preparation of the National ICZM Strategy.

65. The representative of Morocco expressed interest in exploring the possibility of taking part in the activities of this Child Project, recalling that Morocco has many strategies for water, energy, food and ecosystems and that opportunities existed for improved integration among these domains. Furthermore, Morocco’s National Sustainable Development Strategy recognizes each of these domains as priority area, and the activities of Child Project 2.2 could
assist the country in meeting the relevant commitments under this strategy. The representative of Morocco informed the participants that the relevant institutions would be consulted about the country’s potential participation in national level activities for this Child Project.

Day 2 Agenda Item 4: Child Project 3.1 “Management Support and Expansion of Marine Protected Areas in Libya”

66. Child Project 3.1 will be executed jointly by UN Environment/MAP, SPA/RAC, IUCN, and WWF-Med, and will achieve the following outcome:

- Expansion of seascapes under protection in Libya, and improved protected area management through the implementation of the Libyan Marine Protected Areas (MPAs) National Strategy, mapping of marine key habitats, monitoring of marine megafauna (mammals, seabirds, turtles and cartilaginous fish), capacity support mechanisms and adoption of permanent solutions.

67. Following a presentation of the activities of Child Project 3.1, the representative of SPA/RAC explained that development of the project document would soon begin in earnest, with the recruitment of a national expert and the organization of an inception meeting with the relevant stakeholders in Libya. UN Environment/MAP explained that the development of this Child Project had been placed on hold for a specific reason, namely to conduct discussions with other donors about the possibility of expanding activities to countries other than Libya. Finally, however, it was decided in February 2018 to proceed with the development of the project for Libya as originally planned. UN Environment/MAP indicated that the development of the project document would proceed swiftly, in view of the fact that the project involves only one country, and that executing partners have already gathered substantial information for the baseline situation.

68. In terms of the identification of the 24 sites of conservation interest that will comprise the Libyan network of MPAs to be established under Child Project 3.1, the representative of SPA/RAC indicated that the executing partners have made a preliminary assessment based on existing data from SPA/RAC and WWF in Libya as well as through desk studies. The next step will be to conduct a rapid assessment of Libya’s coast to identify additional candidate areas and to agree upon a final list of sites to be included in the national network of MPAs.

69. The representative of Egypt cited the country’s extensive experience in the management of MPAs and invited the executing partners to consider the organization of capacity building workshops for Libyan experts at MPAs in Egypt. The representative of SPA/RAC thanked the representative of Egypt for this suggestion and explained that capacity building within Child Project 3.1 would focus on the ‘train the trainer’ approach and would provide opportunities for trainees to apply MPA management strategies in small-scale projects conducted outside of the scope of the MedProgramme. The representative of SPA/RAC observed that the design of training activities – including the possibility of travel – was subject to the available budget.

70. In view of potential synergies between Child Project 3.1 and Child Project 2.1, the representative of UNESCO-IHP recalled to the participants that UNESCO will undertake activities related to submarine groundwater discharge with Libya, in the form of regional trainings and capacity building in collaboration with the General Water Authority.

Day 2 Agenda Item 5: Child Project 4.1 “Mediterranean Sea Basin Environment and Climate Regional Support Project”
71. Child Project 4.1 will be executed by UN Environment/MAP, and will achieve the following outcomes:

- Increased uptake of lessons and of cutting-edge knowledge generated across the portfolio of interventions, and the active participation in IW LEARN activities, Communities of Practice, and events; improve the capacity of key regional stakeholders and of the global IW community to build climate resilience, maintain coastal resources, protect biodiversity and restore coastal ecosystems.

- The effective coordination and learning among all Child Projects, consistency with the Programme objectives, and synergies among projects and partners, ensured.

72. The Secretariat informed the participants that a key element of Child Project 4.1 is the Knowledge Management Strategy and associated tools that will facilitate information sharing and promotion of the Programme’s results among the partners, the region’s stakeholders and beyond. He added that a Knowledge Management Specialist would be recruited in April 2018 to provide guidance on this aspect of the Child Project, including on the requirements for the creation of an appropriate knowledge platform and for populating this platform with appropriate data from the countries and partners. A successful example of an effective knowledge platform was cited: the case of the platform for the GEF’s Caribbean Regional Fund for Wastewater Management (GEF-CREW) (http://www.gefcrew.org/).

73. With respect to the Knowledge Management Strategy and the related platform, the UN Environment GEF Task Manager for CW requested that the Knowledge Management Specialist reflect all indicators of all child projects in the establishment of the relevant tools and frameworks. It was furthermore explained that the GEF’s Chemical and Waste Focal Area has created a proof-of-concept platform to assist countries in meeting the reporting requirements of the Stockholm and Basel Conventions (https://m.youtube.com/watch?v=BMyc6alVeh0).

74. The representative of Egypt asked that special attention be given to designing data collection and management tools that support policy development, while at the same time responding to the needs of the GEF Secretariat and the Programme partners. The Secretariat confirmed that one of the aims of the Child Project 4.1 was to strengthen the science-policy interface, and that a great deal of relevant data has already been generated by the countries. Furthermore, the knowledge platform proposed under Child Project 4.1 could be used to aggregate and promote these data, with the clear understanding that no data would be disseminated without the permission of its owner. The Secretariat noted that this knowledge platform could one day become a tool of the Contracting Parties of the Barcelona Convention.

75. The representative of Albania noted that many countries lacked data and asked whether the Programme would support generation of data for the Integrated Monitoring and Assessment Programme (IMAP). The Secretariat confirmed that certain data generated from the MedProgramme could indeed assist countries in meeting the IMAP reporting requirements.

76. In response to the representative of Albania’s suggestion to employ social media tools to promote the Programme, the Secretariat confirmed that the use of modern communication tools – including social media, YouTube and thematic videos – would be fully integrated in the Programme’s communication and outreach strategy.

**Day 2 Agenda Item 6: GEF Special Climate Change Fund (SCCF) Project**

77. The SCCF Project will be executed by UN Environment/MAP and GWP-Med and will achieve the following outcomes:
• Stakeholder engagement on climate change adaptation is strengthened and partnerships are enhanced.
• Adaptation mainstreamed into IZCM strategies and coastal plans.
• Public spending relative to climate change adaptation in the coastal zone prioritized and national resources mobilized.
• Facilitated access to international climate change adaptation financing.
• Strengthened science-policy interface, accessibility of related knowledge and enhanced regional climate information.

78. The Secretariat recalled that the SCCF Project is a medium-sized project that will mainstream climate change adaptation into coastal planning using a proven approach that was successfully implemented in a past GEF intervention in the region. New funding opportunities under the GEF-7 Replenishment may provide opportunities for replication of this approach in the region.

79. Regarding the geographic scope of the national level activities foreseen in Morocco for the SCCF Project, the representative of Morocco reiterated her wish to maintain the same scope as Child Project 2.1, namely the Tangier-Tétouan-Al Hoceima region. The representative of Morocco recalled that it would be most efficient to work in this manner, as the same stakeholders would be engaged for both projects. The representative of PAP/RAC (the executing agency that will lead the ICZM activities in Child Project 2.1 and the integration of climate change adaptation in coastal plans for the SCCF Project) concurred that it would be best to work at the regional level.

80. During the discussion of execution modalities for activities foreseen at the national level in the SCCF Project, the representatives of Montenegro and Morocco reiterated their wishes to have PAP/RAC and Plan Bleu execute the planned activities in their respective countries on the preparation of recommendations for integrating climate change adaptation in local coastal planning processes.

81. The representative of Egypt recalled that his country was among the countries most vulnerable to climate change and inquired about why the country was not participating in the SCCF Project. The Secretariat recalled that Egypt had been invited to contribute to and endorse the Project Identification Form (PIF) of the GEF SCCF Project but that unfortunately this did not occur. The Secretariat recalled that an official letter was transmitted to the GEF Operational Focal Points of all GEF eligible countries on 9 September 2016 to inform about the opportunity to participate in the SCCF Project and to request inputs and advice from the countries on the development of the PIF. This communication was followed by a second letter on 30 September 2016 to formally request the endorsement of the PIF by the countries prior to the submission to the GEF Secretariat. Six countries issued letters of endorsement for the SCCF Project, namely Albania, Algeria, Libya, Montenegro, Morocco and Tunisia.

82. The representative of PAP/RAC recalled that a large project entitled “Enhancing climate change adaptation in the North coast and Nile Delta Regions in Egypt” had recently been approved by the Green Climate Fund for execution by UNDP Egypt and the Ministry of Water Resources and Irrigation. The PAP/RAC National Focal Point for Egypt has already undertaken a consultation with the Ministry of Water Resources and Irrigation and with UNDP Egypt and they agreed to build synergies with the GEF MedProgramme CP 2.1.
Day 2 Agenda Item 7: Discussion on timeline for completion of the development phase

83. Following discussions, the GEF Operational Focal Points, the nominated representatives and the implementing and executing partners agreed on the tentative timelines proposed for the completion of the project documents and their submission to the GEF Secretariat for endorsement, as set forth in Table 4 of the present report.

Day 2 Agenda Item 8: Conclusions of the first regional consultation

84. In the closing of the consultation, the GEF Operational Focal Points, the nominated representatives and the implementing and executing partners agreed on a set of conclusions and next steps, which have been reformulated for clarity and are set forth on pages 2 and 3 of the present report.
### Annex 1

Agenda of the First Regional Consultation of the MedProgramme

#### Day 1: 7 March 2018

<table>

² The SCCF Project “Enhancing Regional Climate Change Adaptation in the Mediterranean Marine and Coastal Areas” was approved after the adoption of the MedProgramme as an external intervention. However, it was agreed with the GEF Secretariat and the participating countries that the project, would be executed as part of the Programme to maximize synergies and efficient use of resources.

Child Project 1.3 "Mediterranean Sea Finance for Water Systems and Clean Coasts (FINWACC)"

Due to the dynamic nature of the potential project pipeline for this Child Project, it is not possible at this stage to identify specific sites for EBRD’s interventions. Activities will be agreed upon with the countries in due course, based on EBRD’s investment criteria and the expected results set forth in the Programme Framework Document for the MedProgramme.
Component 2. Enhancing Sustainability and Climate Resilience in the Coastal Zone

**Child Project 2.1 “Mediterranean Coastal Zones Climate Resilience, Water Security and Habitat Protection”**

### National activities

| Coastal Zone Management | National assessment to support implementation of the ICZM Protocol  
| Management of Coastal Aquifers and Related Ecosystems | For the Buna - Bojana Transboundary Coastal Aquifer (in cooperation with Montenegro):  
| | • In-depth assessment and characterization of the aquifer through the application of a multi-disciplinary indicator-based methodology  
| | • Identification and evaluation of coastal aquifer and ecosystems services  
| | • Analyses of saline intrusion processes  
| | • National Dialogues identifying potential conjunctive management solutions  
| | • Preparation of coastal aquifer management plan  
| | • Aquifer monitoring multi-purpose networks and protocols designed and field tested, and responsible personnel trained |

### Regional activities

| Coastal Zone Management | Participation in the sub-regional training in support of ICZM Protocol implementation  
| Management of Coastal Aquifers and Related Ecosystems | Groundwater submarine discharge-related activities:  
| | • Regional Assessment of Submarine Groundwater Discharges  
| | • Two regional workshops for training and capacity-building on submarine groundwater discharge (English and French speaking countries)  
| | • Joint regional training modules on conjunctive surface water and groundwater management  
| | • Gender training on sex-disaggregated water data collection |

| Programme-wide communication and knowledge management | Sharing of best practices as contribution to MedProgramme-wide Knowledge Management Strategy  
| | • Contribution of data and active use of the MedProgramme Knowledge Management Platform  
| | • Participation in IW LEARN events |
## ALBANIA - Summary of national and regional activities in the MedProgramme

**Child Project 2.2 “Mediterranean Coastal Zones: Managing the Water-Food-Energy and Ecosystem Nexus”**

### National activities

<table>
<thead>
<tr>
<th><strong>Nexus assessments, related capacity building and institutional support</strong></th>
<th>In three priority coastal areas:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Nexus assessments conducted</td>
</tr>
<tr>
<td></td>
<td>• Nexus strategies or action plans developed in collaboration with relevant stakeholders, with gender mainstreamed throughout</td>
</tr>
<tr>
<td></td>
<td>• Establishment of nexus committees (building on new or existing interministerial or cross-sectoral committees)</td>
</tr>
<tr>
<td></td>
<td>• Training events on the nexus approach delivered to national and local administrations and other key stakeholders</td>
</tr>
<tr>
<td></td>
<td>• Nexus demonstration activities designed and implemented to reduce tension among the competing water uses identified in the nexus assessment</td>
</tr>
</tbody>
</table>

| **Communication and outreach** | • Engagement in the national Information Communication and Outreach Strategy in the three priority coastal areas |

### Regional activities

| **Nexus assessments, related capacity building and institutional support** | • Three nexus regional dialogue meetings and one partnership conference organized to build countries’ capacity on the nexus approach and foster relationships with potential financiers |

| **Identification of bankable nexus interventions** | • Three project fiches prepared for priority nexus interventions and/or investments in collaboration with interested countries and submitted for consideration to governments and international financing institutions |

| **Programme-wide communication and knowledge management** | • Engagement in the Regional Information Communication and Outreach Strategy for CP 2.2 |
|  | • Engagement in the MedProgramme Knowledge Management Strategy and replication activities |
|  | • Participation in IW LEARN events, communities of practice, etc. |
### Component 4. Knowledge Management and Programme Coordination

**Child Project 4.1 “Mediterranean Sea Basin Environmental and Climate Regional Support Project”**

<table>
<thead>
<tr>
<th>Regional activities</th>
<th></th>
</tr>
</thead>
</table>
| Knowledge sharing and dissemination of results | • Cooperation in the identification and sharing of lessons learned and successful policies and practices (in support of the preparation of GEF Experience Notes, scientific publications, …)  
  • Contribution of thematic content for communications on MedProgramme results, designed for modern dissemination tools (programme website, videos, social media campaigns, international media coverage, YouTube, etc.)  
  • Regular use of the MedProgramme Bulletin (published every six months) to remain informed of the results of all Child Projects  
  • Contribution to IW LEARN website and events, as well as global IW and CW communities of practice |
| Coordination and synergies  | • Participation in yearly stocktaking meetings with all Child Projects and countries, implementing and execution agencies, GEF, and other regional stakeholders, in view of generating synergies among the Child Projects |

**Child Project 1.3** "Mediterranean Sea Finance for Water Systems and Clean Coasts (FINWACC)"

Due to the dynamic nature of the potential project pipeline for this Child Project, it is not possible at this stage to identify specific sites for EBRD’s interventions. Activities will be agreed upon with the countries in due course, based on EBRD’s investment criteria and the expected results set forth in the Programme Framework Document for the MedProgramme.

Component 2. Enhancing Sustainability and Climate Resilience in the Coastal Zone

**Child Project 2.1** "Mediterranean Coastal Zones Climate Resilience, Water Security and Habitat Protection"
### Summary of national and regional activities in the MedProgramme

#### ALGERIA

**National activities**

| Coastal Zone Management | • National assessment to support ratification of the ICZM Protocol  
• Stakeholder consultation to support ratification of the ICZM Protocol  
• Coast Day central celebration |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Management of Coastal Aquifers and Related Ecosystems</td>
<td>None</td>
</tr>
</tbody>
</table>

**Regional activities**

| Coastal Zone Management | • Participation in the sub-regional training in support of ICZM Protocol implementation  
• Identification of national capacities, strengths and gaps regarding coastal observation, to feed into a conceptual framework and structure for a coastal observation system to support the implementation of ICZM processes at national and local levels and to monitor progress towards achievement of good environmental status of the coast  
• Access to and support for the MedOpen online training modules on ICZM, adaptation to climate change, building coastal resilience, marine spatial planning, and land use change analysis  
• Participation in annual Coast Day events |
|-------------------------|------------------------------------------------------------------|
| Management of Coastal Aquifers and Related Ecosystems | • Groundwater submarine discharge-related activities:  
  o Two regional workshops for training and capacity-building on submarine groundwater discharge (English and French speaking countries)  
  • Joint regional training modules on conjunctive surface water and groundwater management  
  • Gender training on sex-disaggregated water data collection |
| Programme-wide communication and knowledge management | • Sharing of best practices as contribution to MedProgramme-wide Knowledge Management Strategy  
• Contribution of data and active use of the MedProgramme Knowledge Management Platform  
• Participation in IW LEARN events |

#### Child Project 2.2 "Mediterranean Coastal Zones: Managing the Water-Food-Energy and Ecosystem Nexus"

**National activities** (specific countries to be identified during the 2018 consultations)

| Nexus assessments, related capacity building and institutional support | In three priority coastal areas:  
• Nexus assessments conducted  
• Nexus strategies or action plans developed in collaboration with relevant stakeholders, with gender mainstreamed throughout  
• Establishment of nexus committees (building on new or existing interministerial or cross-sectoral committees)  
• Training events on the nexus approach delivered to national and local administrations and other key stakeholders  
• Nexus demonstration activities designed and implemented to reduce tension among the competing water uses identified in the nexus assessment |
| Communication and outreach | • Engagement in the national Information Communication and Outreach Strategy in the three priority coastal areas |

**Regional activities**

**Child Project 2.2** “Mediterranean Coastal Zones: Managing the Water-Food-Energy and Ecosystem Nexus”

### National activities
**Nexus assessments, related capacity building and institutional support**
In three priority coastal areas:
- Nexus assessments conducted
- Nexus strategies or action plans developed in collaboration with relevant stakeholders, with gender mainstreamed throughout
- Establishment of nexus committees (building on new or existing interministerial or cross-sectoral committees)
- Training events on the nexus approach delivered to national and local administrations and other key stakeholders
- Nexus demonstration activities designed and implemented to reduce tension among the competing water uses identified in the nexus assessment

**Communication and outreach**
- Engagement in the national Information Communication and Outreach Strategy in the three priority coastal areas

### Regional activities
**Nexus assessments, related capacity building and institutional support**
- Three nexus regional dialogue meetings and one partnership conference organized to build countries’ capacity on the nexus approach and foster relationships with potential financiers

**Identification of bankable nexus interventions**
- Three project fiches prepared for priority nexus interventions and/or investments in collaboration with interested countries and submitted for consideration to governments and international financing institutions

**Programme-wide communication and knowledge management**
- Engagement in the Regional Information Communication and Outreach Strategy for CP 2.2
- Engagement in the MedProgramme Knowledge Management Strategy and replication activities
- Participation in IW LEARN events, communities of practice, etc.

### Component 4. Knowledge Management and Programme Coordination

**Child Project 4.1** “Mediterranean Sea Basin Environmental and Climate Regional Support Project”

### Regional activities
**Knowledge sharing and dissemination of results**
- Cooperation in the identification and sharing of lessons learned and successful policies and practices (in support of the preparation of GEF Experience Notes, scientific publications, ...)
- Contribution of thematic content for communications on MedProgramme results, designed for modern dissemination tools (programme website, videos, social media campaigns, international media coverage, YouTube, etc.)
- Regular use of the MedProgramme Bulletin (published every six months) to remain informed of the results of all Child Projects
- Contribution to IW LEARN website and events, as well as global IW and CW communities of practice
**Coordination and synergies**

- Participation in yearly stocktaking meetings with all Child Projects and countries, implementing and execution agencies, GEF, and other regional stakeholders, in view of generating synergies among the Child Projects.
LIBYA - Summary of national and regional activities in the MedProgramme

Component 1. Reduction of Land Based Pollution in Priority Coastal Hotspots, and Measuring Progress to Impacts

**Child Project 1.3 "Mediterranean Sea Finance for Water Systems and Clean Coasts (FINWACC)"**

Due to the dynamic nature of the potential project pipeline for this Child Project, it is not possible at this stage to identify specific sites for EBRD’s interventions. Activities will be agreed upon with the countries in due course, based on EBRD’s investment criteria and the expected results set forth in the Programme Framework Document for the MedProgramme.

</tr>
</tbody>
</table>
### LIBYA - Summary of national and regional activities in the MedProgramme

**Effective management of MPAs**
- MPA management unit established in at least one on-site
- MPA management plan elaborated for at least one site

**Civil society engagement**
- One CSO participatory platform established to encourage CSO participation in the management of MPAs
- At least five CSOs involved in MPA establishment and management participatory processes

**Capacity building**
- At least four training events on MPA governance, sustainable management, stakeholder engagement, and Marine megafauna monitoring organized for conservation groups, representatives of fisheries and tourism, and government stakeholders

**Awareness raising and communication**
- At least four awareness raising campaigns designed and launched, targeting the general public, fisheries, tourism, coastal management and/or urban planners
- Engagement in the MedProgramme Knowledge Strategy, including sharing of lessons learned, providing data to feed the Knowledge Management platform
- Participation in IW LEARN events, communities of practice, etc.

**Knowledge sharing and dissemination of results**
- Sharing of best practices as contribution to MedProgramme-wide Knowledge Management Strategy
- Contribution of data and active use of the MedProgramme Knowledge Management Platform
- Participation in IW LEARN events, IW communities of practice

---

**GEF Special Climate Change Fund Project (SCCF Project)**

**SCCF Project “Enhancing Regional Climate Change Adaptation in the Mediterranean Marine and Coastal Areas”**

| National activities | In the Kotor Bay area:  
| Stakeholder engagement, capacity building and cooperation | • A gender-sensitive climate risk assessment undertaken through a stakeholder-led process to provide sufficient basis for building coastal resilience to climate change and sustainability  
| | • Solutions identified for building coastal resilience and sustainability through stakeholder involvement, using the participatory approach methodology Climagine |

| Mainstreaming climate change adaptation in coastal planning | • Preparation of guidelines on mainstreaming climate change adaptation in the appropriate local coastal planning processes in the Kotor Bay area (synergy with CP 2.1 of the MedProgramme)  
| | • Evaluation of the legal, policy and institutional barriers for implementing solutions to mitigate climate risks |

| Regional activities | • Training on climate change adaptation solutions, including ecosystem-based solutions, for technical experts and decision makers  
| Stakeholder engagement, capacity building and cooperation | • Sub-regional workshops for international finance institutions, and the banking, insurance and private sectors to enhance the use of coastal climate risk and vulnerability in investment decisions |

| Access to financing mechanisms for | • Development of methodological guidelines on preparation of financing plans for climate change adaptation in coastal areas including domestic, international and private sector investments |
### Climate Change Adaptation

- Countries invited to participate in the development of a full-fledged project proposal to access international financing support for climate change adaptation in coastal zones

### Knowledge Management, Communication and Coordination

- Regional meeting to share knowledge and lessons learned, and to discuss opportunities for replication at the national level in additional countries
- Sharing of best practices as contribution to MedProgramme-wide Knowledge Management Strategy
- Contribution of data and active use of the MedProgramme Knowledge Management Platform
- Participation in IW LEARN events

MOROCCO - Summary of national and regional activities in the MedProgramme

Regional activities

| Environmental standards | - Development of regional standards on desalination, aquaculture and wastewater and sludge management, for consideration in the BC framework |
| Knowledge sharing and dissemination of results | - Sharing of best practices as contribution to MedProgramme-wide Knowledge Management Strategy |
| | - Contribution of data and active use of the MedProgramme Knowledge Management Platform |
| | - Participation in IW LEARN events, IW and CW communities of practice |

Child Project 1.3 “Mediterranean Sea Finance for Water Systems and Clean Coasts (FINWACC)”

Due to the dynamic nature of the potential project pipeline for this Child Project, it is not possible at this stage to identify specific sites for EBRD’s interventions. Activities will be agreed upon with the countries in due course, based on EBRD’s investment criteria and the expected results set forth in the Programme Framework Document for the MedProgramme.

Component 2. Enhancing Sustainability and Climate Resilience in the Coastal Zone

Child Project 2.1 “Mediterranean Coastal Zones Climate Resilience, Water Security and Habitat Protection”

National activities

| Coastal Zone Management | - Preparation of the ICZM Plan for the Tanger-Tétouan-Al Hociema Region, relying on the implementation of Climagine participatory approach (synergy with SCCF Project, where climate change adaptation will be mainstreamed into this plan) |
| | o Scoping report to describe the generally understood conditions of the plan area and to agree on priorities |
| | o Establishing governance mechanism for planning |
| | o Engaging stakeholders through Climagine |
| | o Diagnostic analysis to deeply understand the root causes of the key issues and to build argumentation for policy solutions |
| | o Validation and developing indicators with Climagine |
| | o Future scenarios and the agreement on the vision |
| | o Designing the future plan |
| | o Validating proposed measures and finalizing Climagine and the ICZM Plan |
| | - National assessment to support implementation of the ICZM Protocol |
| | - Stakeholder consultation to support implementation of the ICZM Protocol |
| | - Coast Day central celebration dedicated to coastal resilience |

| Management of Coastal Aquifers and Related Ecosystems | - For the Rhiss Nekkor Coastal Aquifer: |
| | o In-depth assessment and characterization of the aquifer through the application of a multi-disciplinary indicator-based methodology |
| | o Identification and evaluation of coastal aquifer and ecosystems services |
| | o Analyses of saline intrusion processes |

**MOROCCO - Summary of national and regional activities in the MedProgramme**

### Nexus assessments, related capacity building and institutional support

- Three nexus regional dialogue meetings and one partnership conference organized to build countries’ capacity on the nexus approach and foster relationships with potential financiers

### Identification of bankable nexus interventions

- Three project fiches prepared for priority nexus interventions and/or investments in collaboration with interested countries and submitted for consideration to governments and international financing institutions

### Programme-wide communication and knowledge management

- Engagement in the Regional Information Communication and Outreach Strategy for CP 2.2
- Engagement in the MedProgramme Knowledge Management Strategy and replication activities
- Participation in IW LEARN events, communities of practice, etc.

---

Component 4. Knowledge Management and Programme Coordination

**Child Project 4.1 “Mediterranean Sea Basin Environmental and Climate Regional Support Project”**

The Mediterranean Sea Programme (MedProgramme): Enhancing Environmental Security

Report of the Second Regional Consultation

Paris, France
20 and 21 September 2018
**Conclusions**

1. The GEF Operational Focal Points (or their representatives) of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro and Tunisia confirmed the importance of the MedProgramme for their countries and for the region, and endorsed the proposals of UN Environment/MAP on (i) the timeline for finalization of the Child Projects of the MedProgramme and their submission to the GEF Secretariat for endorsement; (ii) the development of the overarching strategies for Knowledge Management and Gender Mainstreaming; and (iii) the arrangements for execution of the MedProgramme through the MedProgramme Coordinating Unit (MedPCU).

2. Following final comments from the GEF Operational Focal Points and the UN Environment Project Review Committee (PRC), Child Project 2.1 and the SCCF Project will be submitted to the GEF for endorsement in October 2018.

3. Child Projects 1.1, 1.2, 1.3, 2.2, 3.1 and 4.1 will be submitted to the GEF for endorsement between October and December 2018.

Background information

1. The Second Regional Consultation was organized by the Coordinating Unit of the UN Environment Mediterranean Action Plan (UN Environment/MAP) and the implementing and executing agencies of the MedProgramme to update the GEF Operational Focal Points about progress on the preparation of the Child Projects, to present the main features of the MedProgramme’s overarching strategies for Knowledge Management and Gender Mainstreaming, and to agree on the next steps for the finalization of all project documents prior to their submission to the GEF for endorsement. The agenda of the Second Regional Consultation is provided in Annex 1.

2. The objective of the MedProgramme is to accelerate the implementation of agreed upon priority actions to reduce the major transboundary environmental stresses affecting the Mediterranean Sea and its coastal areas while strengthening climate resilience and water security, and improving the health and livelihoods of coastal populations. The MedProgramme was endorsed by the GEF Council in October 2016 with seven Child Projects contributing to the GEF’s focal areas of International Waters (IW), Chemicals and Waste (CW), and Biodiversity (BD) (Table 1). An additional project financed by the GEF’s Special Climate Change Fund (SCCF) was subsequently developed and is now also considered one of the Child Projects of the MedProgramme, in support of the GEF focal area on Climate Change (CC). Hence, there is a total of eight Child Projects in the MedProgramme.

3. Nine countries have endorsed the MedProgramme: Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro, Morocco, and Tunisia. It will be executed over a period of five years starting in 2019.

* GEF Operational Focal Point
Presentations

6. Presentations were delivered for the eight Child Projects of the MedProgramme, as well as a progress report on the preparation of all projects and interventions on the development of the MedProgramme’s overarching strategies for Knowledge Management and Gender Mainstreaming. The present report does not attempt to summarize these presentations, but focuses rather on the discussions they prompted.

7. All of the presentations delivered during the Second Regional Consultation are available at: https://www.dropbox.com/sh/544agsnmsbag3m/AAB9dRSpwR9Ur5qRkTzNpPO_a?dl=0.

Welcoming remarks and initial discussions

8. Ms. Alice Aureli, Chief of the Section on Groundwater Systems and Settlements at UNESCO’s International Hydrological Programme (IHP), welcomed participants on behalf of UNESCO and declared that the preparation of the MedProgramme was an excellent example of effective collaboration between countries, UN organizations, nongovernmental organizations and associations. Ms. Aureli recalled that implementing solutions to the complex environmental challenges in the Mediterranean will require a multi-sector, multi-disciplinary strategy, consistent with the programmatic approach used in the design of the MedProgramme.

9. Mr. Gaetano Leone, Coordinator of the UN Environment/MAP-Barcelona Convention Secretariat, welcomed participants and thanked UNESCO for hosting the event. Mr. Leone observed that the decision to prepare a multi-focal area programme with the GEF had been a risk, but one that was carefully considered and necessary to amplify the positive impacts of the work of the many stakeholders in the region that had joined forces in 2016 to realize a collective vision: “A healthy Mediterranean with marine and coastal ecosystems that are productive and biologically diverse contributing to sustainable development for the benefit of present and future generations”. Mr. Leone recalled that the MedProgramme builds on the work undertaken in the region by the Contracting Parties, the UN Environment/MAP Regional Activity Centres and other partners, as well as on the foundations of an important set of tools developed in the framework of the Barcelona Convention, including its Protocols, the Transboundary Diagnostic Analysis, and regional and national action plans, amongst others. Mr. Leone recognized the GEF for its twenty years of investments in the region, many of which directly supported these activities. In closing, Mr. Leone informed participants that significant progress had been made since the First Regional Consultation in March 2018, noting that two Child Projects of the MedProgramme are ready for submission to the GEF, that two additional Child Projects are nearing finalization, and that the remaining four Child Projects will be completed by the close of 2018.

10. Mr. Yegor Volovic, the UN Environment GEF Portfolio Manager for International Waters (IW), declared that the MedProgramme was one of UN Environment’s flagship initiatives due to its wide-reaching activities, its innovative programmatic approach, and its ability to convene a diverse set of stakeholders to design interventions on the ground, including international finance institutions, development banks, the MAP system with its Regional Activity Centres, and technical experts. He recalled that the implementation of actions on the ground represents one of the key comparative advantages of UN Environment and the Regional Seas Programme (RSP) that it administers. Mr. Volovic noted that the Barcelona Convention and the Mediterranean Action Plan, which form the legal and policy framework for the MedProgramme, were developed in the context of the RSP for the Mediterranean, one of the first that was established.
11. Ms. Eloise Touni, the UN Environment GEF Task Manager for Chemicals and Waste (CW), recalled that the MedProgramme’s activities on CW would support countries in efforts to meet their commitments on Persistent Organic Pollutants (POPs) and mercury under the Stockholm, Basel and Minamata Conventions and announced the corresponding targets for the MedProgramme: removal of 50 tons of mercury and 3,250 tons of POPs. In terms of progress with the development of the MedProgramme’s CW activities, Ms. Touni informed participants that quantities of wastes had been confirmed in the participating countries and that life cycle analyses had been undertaken to identify strategies for the prevention of new wastes, especially the new POPs recently added to the Stockholm Convention. Ms. Touni also highlighted a challenge concerning the mercury removal activities intended to assist countries meet obligations under the Minamata Convention: since the Convention only recently entered into force, many countries have still not ratified it, thereby affecting their ability to take part in the mercury removal activities foreseen under the MedProgramme. Ms. Touni asked the representatives of the participating countries to indicate any assistance they may require to ratify the Minamata Convention, and offered the full support of UN Environment in this regard.

Day 1 Agenda Item 1: GEF and the Mediterranean – 20 years of support, and expectations under GEF-7

12. Mr. Steffen Hansen, Environmental Specialist on International Waters for the Europe and Central Asia regional team at the GEF Secretariat (hereafter the representative of the GEF Secretariat), reconfirmed that the MedProgramme is a flagship for the GEF in the region and outlined the interventions leading up to its development that the GEF had financed in the Mediterranean over the past 20 years. These have included the preparation of the previous Transboundary Diagnostic Analyses (TDAs) and of the Strategic Action Programmes on pollution (SAP MED) and biodiversity (SAP BIO) in the Mediterranean. He noted that several factors were creating momentum that will increase the MedProgramme’s chances for success, including the update by countries of their National Action Plans (NAPs) for the prevention of land-based pollution; the scaling up of these action plans; and capacity building for institutional reforms. Responding to an earlier statement about the risk involved in developing an ambitious multi-focal area programme, the representative of the GEF Secretariat recalled that the GEF is committed to doing “what is difficult, what might fail” but to ensure that this process leads to positive results for countries.

13. In 2018, countries pledged US$ 4.1 billion for the seventh replenishment of the Global Environmental Facility (GEF) trust fund. This new four-year investment cycle (GEF-7) will provide funds to protect the planet and human wellbeing through activities in the GEF focal areas of Biodiversity, Chemicals and Waste, Climate Change, International Waters, Land Degradation, and through other programs.

14. The GEF has set three strategic objectives for the International Waters focal area under GEF-7: (i) strengthening the Blue Economy opportunities, (ii) improving management in the Areas Beyond National Jurisdiction, and (iii) enhancing water security in freshwater ecosystems. Enhancing water security is one of the primary objectives of the MedProgramme, and is reflected in the Child Projects of Component 2 and the activities to promote the sustainable management of coastal aquifers, integrated water resources management, adaptation to climate change, and the nexus approach for evaluating competing demands for water, energy, food and ecosystem goods and services.

15. Further information about the GEF-7 programming framework and the associated global environmental benefits can be found in the GEF Council Document GEF/R.7/19 GEF-7 Replenishment Programming Directions.
Day 1 Agenda Item 2: Remarks from the Permanent Delegations to UNESCO

16. The representative of UNESCO IHP opened the floor to interventions from the Permanent Delegations to UNESCO, recalling that one of the assets of UNESCO’s participation in the MedProgramme was its direct voice with the representatives of the countries, who will be able to support implementation of the programme by providing information and facilitating contacts with institutions, scientist and technicians.

17. H. E. Mr. Ferit Hoxha, Ambassador Extraordinary and Plenipotentiary, Permanent Delegate of Albania to UNESCO, thanked the partners of the MedProgramme for their work to protect the Mediterranean Sea and its coastal areas, and confirmed that the activities of the MedProgramme would assist Albania in its efforts to achieve progress through sustainable development and protection of the environment. The Ambassador recalled that Albania was facing increasing risks associated with climate change and natural hazards and that the country’s coastal zone was most vulnerable to these risks, which were affecting water supplies, agriculture and tourism in these areas. The Ambassador also cited a number of expectations for the MedProgramme, including strong coordination, effective exchange of information and opportunities for capacity building, increased resilience to climate change in coastal communities, assistance with the management of groundwater resources, and the protection of biodiversity.

18. H. E. Ms. Dragica Ponorac, Ambassador Extraordinary and Plenipotentiary of Montenegro to France, Permanent Delegate of Montenegro to UNESCO, also thanked the partners and expressed Montenegro’s satisfaction with participating in the MedProgramme. The Ambassador underlined the importance of the MedProgramme to Montenegro, which is currently working to meet its obligations under Chapter 27 (Environment) for its accession to the European Union (EU), which will require more than US$ 1.7 billion in investments. The Ambassador reminded participants that Montenegro is defined as an ecological state in its Constitution, and reiterated the country’s commitment to meet the objectives of the MedProgramme especially through the activities foreseen in the hotspot areas of the Kotor Bay and the Bijela shipyard.

19. H.E. Mr. Ghazi Gherairi, Ambassador Extraordinary and Plenipotentiary, Permanent Delegate of Tunisia to UNESCO, thanked the partners for their collaboration to implement the MedProgramme, and expressed appreciation for the fact that the programme will address the role of the environment in ensuring security. The Ambassador noted that the overarching challenge for the region is to transmit a healthy Mediterranean to the next generation, and that Tunisia is aware of the stakes at hand and has placed environmental values at the heart of its strategy of growth for the future. The Ambassador also took the opportunity to recognize the IHP for its work with the Government of Tunisia. In closing, the Ambassador pledged the willingness of the Government of Tunisia to provide the tools necessary for the success of the MedProgramme.

20. The Coordinator of the UN Environment/MAP-Barcelona Convention Secretariat thanked the ambassadors for their remarks and recalled that the MedProgramme is being prepared under the leadership of the participating countries and that their guidance is important to move the programme towards success. The Coordinator highlighted that all participating countries of the MedProgramme are Contracting Parties of the Barcelona Convention, and many are participating in the Bureau including Egypt, Montenegro and Tunisia as well as Albania which currently holds the presidency. In closing, the Coordinator expressed gratitude to all countries present and contributing to the MedProgramme.
Day 1 Agenda Item 3: Setting the scene and objectives of the consultation

21. Mr. Lorenzo Galbiati, Project Pool Manager at the UN Environment/MAP-Barcelona Convention Secretariat (hereafter the Secretariat), reviewed the agenda of the consultation with participants and outlined the main objectives of the two-day event: (i) update the GEF Operational Focal Points on the status of the development of all Child Projects; (ii) request their feedback on outstanding issues; (iii) agree on the next steps for finalization of the preparation phase of the MedProgramme; and (iv) present the main features of the Knowledge Management and Gender Mainstreaming Strategies that will be applied to all Child Projects.

22. The Secretariat recalled that the MedProgramme builds on the strong foundations established in the region from more than US$ 70 million in investments from the GEF over 20 years for activities supporting the implementation of the Barcelona Convention. These investments have led to the development of the initial Transboundary Diagnostic Analysis for the Mediterranean Large Marine Ecosystem (TDA-MED) as well as its 2005 update and 2015 supplement on coastal aquifers; Strategic Action Programmes to Address Pollution from Land-based Activities (SAP-MED) and for the Conservation of Biological Diversity (SAP-BIO), as well as their associated National Action Plans (NAPs); and the Protocol on Integrated Coastal Zone Management (ICZM).

23. The Secretariat also informed the participants about the delays encountered in the development of the Child Projects and explained that the period for submission to the GEF would be extended to December 2018. However, this should not affect the anticipated initiation of execution of the MedProgramme, which is foreseen in the first or second quarter of 2019.

Day 1 Agenda Item 4: Progress report on preparation of the MedProgramme Child Projects and their submission to the GEF

24. The Secretariat provided the milestones of the MedProgramme (Figure 1), an update on the status of action items from the First Regional Consultation in March 2018 (Table 3), the status of the development of each of the Child Projects (Table 4), the national and regional consultations foreseen between October and December 2018 (Table 5), the schedule for the completion of the preparation phase of the MedProgramme (Table 6) and the tentative timeline for the initiation of activities (Table 7).

| November – December 2018  | • Establish the legal and procedural frameworks for the Programme execution  
                              • Evaluate needs for the new legal agreements that will be established with implementing and executing partners, national institutions, etc.  
                              • Prepare terms of reference for staff that will be involved in the Programme |
| January – March 2019      | • Establish new legal agreements  
                              • Set an operative budget in the UN Environment Enterprise Resource Planning System (Umoja)  
                              • Allocate funds for each Child Project |
| April – June 2019         | • Initiate preparation of the inception report and workshop  
                              • Arrange consultations with the countries  
                              • Staff the Child Projects |

25. Ms. Olfat Hamdan, the representative of the GEF Operational Focal Point of Lebanon (hereafter the representative of Lebanon), inquired about one of the action items from the First National Consultation, namely the nomination by the GEF Operational Focal Points of national CW and IW focal points, indicating that Lebanon had not provided this information. The Secretariat informed that the selection of national focal points for CW and IW for the purposes of the MedProgramme was an internal matter for each country, and that all communications from the Secretariat regarding project development would continue to be directed to the GEF Operational Focal Point. As agreed at the First Regional Consultation, the GEF Operational Focal Point will coordinate the review of project documents with their national experts and provide a single set of comments to the executing agency that is responsible for the preparation of the Child Project.

26. Mr. Karim Sahnoun, the representative of the GEF Operational Focal Point of Tunisia (hereafter the representative of Tunisia), asked for clarification about the national activities for Child Project 2.2 presented in the overview of national and regional activities of the Child Projects for each country. Mr. Dimitris Faloutsos, Deputy Regional Coordinator of GWP Med, the leading executing agency for this Child Project, explained that a nexus assessment for the North West Sahara aquifer was foreseen in the context of a project funded by Sida, and that this assessment would contribute to the overall results of Child Project 2.2, but that no GEF funds would be used to finance national level activities in Tunisia for this Child Project.

**Day 1 Agenda Item 5: Update on Child Project 4.1**

27. Child Project 4.1 will play a key role in the MedProgramme, as it will: (i) monitor the progress of the entire portfolio of projects towards the programme’s overarching goal of enhancing environmental security, and (ii) provide essential support functions to all Child Projects of the MedProgramme through three main lines of action: coordination and monitoring; knowledge management; and gender mainstreaming. In addition, Child Project 4.1 will produce technical activities, including the development of databases, the implementation of the Knowledge Management Strategy, as well as preparation of communication materials and the Annual Stocktaking Meetings. A conceptual overview of the objectives, benefits and structure of Child Project 4.1 is provided in Figure 2.
28. The project document and substantive annexes for Child Project 4.1 will be provided to the GEF Operational Focal Points and the partners for comments by 15 October.

**Figure 2** Infographic on the objectives, benefits and structure of Child Project 4.1 (Credit: Debasmita Boral)

29. The Secretariat emphasized that the development of programme-level strategies for knowledge management and gender mainstreaming has not been attempted before in the context of a GEF programmatic approach, and therefore represents an important innovation.
30. The representative of Lebanon confirmed that Child Project 4.1 has an important role in the MedProgramme, especially for overall coordination and to identify synergies with other initiatives and projects at the regional and international level. The representative of Lebanon then asked for clarification about the link between the MedProgramme Coordinating Unit (MedPCU) and the implementation of activities at the national level. The Secretariat explained that the national activities will be developed by the executing partners of the corresponding Child Projects and that the MedPCU – in the framework of Child Project 4.1 – will monitor progress on all Child Projects and help them to promote their knowledge tools at the level of the programme, in addition to providing other services. The specific modalities for execution of national level activities will be discussed during the inception phase of each Child Project. The Secretariat emphasized that the execution of activities with the relevant national and sub-national institutions for all countries will be coordinated by the executing partners (the approach successfully used in the MedPartnership) and that there was no expectation for the governments of the participating countries to create a national coordination structure for the MedProgramme.

31. Ms. Ivana Stojanovic, the representative of the GEF Operational Focal Point of Montenegro (hereafter the representative of Montenegro), expressed support for the cross-cutting approach proposed for the design of Child Project 4.1 and thanked the partners for reflecting the national priorities of Montenegro in the design of Child Project 2.1 and the SCCF Project. Making reference to the activities of Child Project 2.1 on coastal observation, the representative of Montenegro expressed her point of view about how these activities could be linked to Child Project 4.1. Given that the Child Project 2.1 could not address Montenegro’s priority related to the development of a coastal database and observatory with the aim of connecting relevant stakeholders and managers of coastal data, Child Project 4.1 is therefore seen as an opportunity to assist the country with this request (in the context of the execution of the Knowledge Management Strategy and its development of knowledge tools).

32. The Coordinator of the UN Environment/MAP-Barcelona Convention Secretariat declared that a centralized approach to knowledge management for the MedProgramme would be more effective and yield more positive impacts than the decentralized approach employed for the MedPartnership, and stated that the knowledge management platform foreseen under Child Project 4.1 would be important to the MAP system during and after the lifespan of the MedProgramme.

33. Mr. Mohamad Kayyal, MED POL Programme Management Officer, observed that the management function of the MedPCU in Child Project 4.1 had been underemphasized with respect to coordination services, and that this management function would require significant efforts across the various Child Projects. The Secretariat explained that this was provided for in the design of the MedPCU, which would ensure traditional management functions for the Child Projects (such as establishment of legal agreements, financial management and procurement), as well as monitoring functions to measure progress to impacts and to prepare the Project Implementation Reports (PIR) of each Child Project for the GEF. The Project Management Cost (PMC) of each Child Project will support the overall management, coordination and monitoring functions delivered by the MedPCU. It was also noted that the MedPCU will execute technical activities under the Child Projects 2.1, 2.2, 3.1 and 4.1 as well as the SCCF Project. This is not the case for the Child Projects 1.1 and 1.2 where dedicated and specific technical assistance will be identified and supported by the project grants for the execution of the activities.
34. Prof. Michael Scoullos, the Chair of GWP Med, recognized the important step taken by the designers of the MedProgramme to coordinate knowledge in the region, and noted the challenge of harnessing all the knowledge generated by activities on the ground in many countries and with many partners. Prof. Scoullos asked what could be done to facilitate the understanding of the countries about the locations of activities and the potential for synergies. The Secretariat indicated that relevant information on this point would be provided during the presentation on the MedProgramme’s Knowledge Management Strategy.

Day 1 Agenda Item 6 – Knowledge Management in the MedProgramme

35. Ms. Lucilla Minelli, the Knowledge Management Expert for the preparatory phase of the MedProgramme, recalled that the overall objective for the Knowledge Management Strategy (KM Strategy) is to “provide a structured and centralized approach to leverage and share knowledge assets generated by the Child Projects of the MedProgramme with the intended beneficiaries and audiences.” The KM Strategy was developed through analysis of the Programme Framework Document and background documentation, surveys, exchanges with project designers, desk studies, and contact with relevant technical counterparts regarding performance and functionality of information technologies.

36. The representative of Lebanon recognized that a diverse set of ideas and activities must be accounted for under the KM Strategy and that it will be important to develop indicators to track the progress towards operational objectives and targets associated with specific knowledge management activities. The Secretariat explained that objectives and activities had been established for knowledge management and that an appropriate number of indicators for these would be reflected in the design of Child Project 4.1. The Secretariat reminded the participants, however, that the decision to implement a KM Strategy represents an additional task that goes above and beyond what is required by the Programme Framework Document approved by the GEF for the MedProgramme.

37. The Chair of GWP Med urged the Secretariat to ensure that the knowledge management tools of the MedProgramme are tailored to the needs of policy makers in particular, and not only to those of the coordinating and/or executing agencies. This sentiment was reiterated by Ms. Daria Povh Skugor, Senior Programme Officer at the Priority Actions Programme Regional Activity Centre (PAP/RAC), who also inquired about the source of the human and financial resources that would be necessary to implement the KM Strategy. The Secretariat confirmed that governments and policy makers are the primary client for the knowledge tools of the MedProgramme, and that the MedProgramme will dedicate sufficient resources to operationalize the strategy, including through the recruitment of a knowledge management expert for the MedPCU and through trainings for partners on how to generate and package data. The Secretariat reminded participants that the KM Strategy is modular in nature, and will start with simple tools and expand to meet the needs of the programme.

38. The representative of the GEF Secretariat noted that the KM Strategy represents an effective tool for the GEF to distill results from the MedProgramme, and asked if the knowledge products of the MedPartnership could be further disseminated via the Knowledge Management Platform, especially to private sector stakeholders. The Knowledge Management Expert confirmed that the results of the MedPartnership would be promoted on the platform, and that the private sector was a targeted audience and beneficiary of the KM Strategy, as well as a potential provider of knowledge. The Secretariat indicated that efforts could be made under the MedProgramme to create partnerships with the private sector.

39. The Chair of GWP Med added that the private sector holds a great amount of data (sometimes of higher quality than that of governments) and recommended that efforts be taken from the
onset of the MedProgramme to clearly define the requirements for data gathering, to determine with countries what data can be shared, and with whom. The representative of UNESCO IHP recalled that in the context of the Barcelona Convention stakeholders have rights to seek data from the private sector, and that the MedProgramme could support these efforts by creating awareness and encouraging the private sector to communicate more.

40. The Secretariat informed participants that the Integrated Monitoring and Assessment Programme (IMAP) of the Barcelona Convention would be considered in the design of the Knowledge Management Platform, and that relevant data from the MedProgramme would be integrated in the IMAP platform.

41. Ms. Abir Abu Zeid, the representative of the GEF Operational Focal Point of Egypt (hereafter the representative of Egypt), expressed satisfaction with the KM Strategy and its goal to integrate all projects and share lessons across the programme, adding that this will be important for all countries. In response to her question about how data would be collected at the national level, the Secretariat explained that the executing partner of each Child Project will have resources to develop activities with the countries and to support national institutions, and that each Child Project will have a dedicated budget for knowledge management activities to produce and manage harmonized data specific to the focus of each Child Project. This includes if appropriate, the use of raw data on specific issues provided by national institutions to contribute to the MedProgramme KM Strategy. The Secretariat reassured participants that data could be shared in an aggregated manner, but that raw data belonging to the countries would not be made available unless the owners of the data agreed to this.

Day 1 Agenda Item 7: Coordination with IW:LEARN and LME:LEARN

42. Mr. Mish Hamid, Project Manager for the GEF International Waters Learning Exchange and Resources Network (IW:LEARN), recalled that the IW:LEARN platform was created to provide knowledge management services to the GEF’s International Waters project managers, since International Waters is the only GEF focal area for which an overarching convention or agreement does not exist. LME:LEARN is a cousin initiative of IW:LEARN, providing services to GEF IW projects in coastal and marine areas, with the goal of strengthening global governance of Large Marine Ecosystems (LME). Mr. Hamid outlined the main services of these initiatives, including knowledge sharing and partnership building, information management, programmatic support, and training (biennial International Waters Conferences, GEF project twinnings, …). Further information on both initiatives is available at https://iwlearn.net/.

43. The Secretariat confirmed that the outputs of the Child Projects of the MedProgramme will feed into the IW:LEARN platform, and that information exchanges with IW:LEARN and LME:LEARN are foreseen in the KM Strategy.

Day 1 Agenda Item 8: Gender Mainstreaming in the MedProgramme

44. Ms. Debasmita Boral, the Gender Expert for the preparatory phase of the MedProgramme, provided a brief history of the evolution of gender considerations in development policies and described the benefits of gender mainstreaming before presenting the MedProgramme’s Gender Mainstreaming (GM) Strategy. The GM Strategy comprises three lines of action: (i) address gender-blind hurdles with gender-differentiated consequences; (ii) mitigate gender-specific barriers and discriminatory norms; and (iii) scale up gender-sensitive policies and deliver gender-responsive outcomes. The MedProgramme is operationalizing the GM Strategy in the preparatory phase by conducting tailored gender assessments and preparing
costed gender action plans for each Child Project. Specific activities on gender will be defined and approved during the inception phase with all stakeholders.

45. The Secretariat recalled that Child Project 4.1 will ensure overall monitoring of the implementation of the GM Strategy and that executing partners will receive training on how to mainstream gender in project activities.

46. The Chair of GWP Med suggested that in some cases, project activities should also be designed to consider the specific needs of marginalized groups, in addition to considerations for gender.

Day 1 Agenda Item 9: Update on Child Project 2.1

47. Child Project 2.1 encompasses activities on Integrated Coastal Zone Management (ICZM), protection of coastal aquifers and groundwater-related ecosystems, as well as integrated management of water resources management, including conjunctive management of surface water and groundwater resources. A joint presentation on the development of the project and its activities was made by representatives of the four executing partners: PAP/RAC (Ms. Daria Povh), Plan Bleu (Mr. Antoine Lafitte), GWP Med (Mr. Dimitris Faloutsos) and UNESCO IHP (Mr. Youssef Filali-Meknassi).

48. Mr. Amr Abdallah Morsy, First Secretary of the Permanent Delegation of the Arabic Republic of Egypt to UNESCO, informed the Secretariat that the Government of Egypt will provide written comments to IHP to be reflected in the final version of the project document for Child Project 2.1.

49. The representative of Lebanon also indicated that Lebanon would provide comments on the project document and furthermore asked for clarification on the activities foreseen in the Damour area of Lebanon, including on the management approach that would be employed for the Damour area and on responsibilities for the implementation of the management that will be produced for this area. The executing partners confirmed that a river basin management approach will be used in the design of an integrated resources management plan for the Damour area (taking into account upstream activities that affect the coast) and that the implementation of the plan will be the responsibility of the country.

50. The representative of Montenegro raised a concern about one of the activities of Child Project 2.1 foreseen in Montenegro, “Preparation of the Management Plan for the Buna-Bojana Transboundary Aquifer”, noting that the title of this plan was similar to the existing plan for the Buna-Bojana area prepared under the MedPartnership. The Secretariat promised to address this concern in the final project document, based on the comments that the representative of Montenegro will provide.

51. Ms. Samira Hamidi, the GEF Operational Focal Point of Algeria (hereafter the representative of Algeria) expressed a wish to see more reference in the project document to the activities on ICZM already undertaken in Algeria (preparation of a coastal strategy and a coastal plan for the Reghaia area) and to discuss the possibility of having activities on ICZM in Algeria that were more concrete than those described in the project document (support for ratification of the ICZM Protocol). The representative of PAP/RAC recalled that the adoption of the ICZM tools already developed in Algeria would support the adoption of the ICZM Protocol, and that efforts would be made to seek additional investments to support Algeria in this work. The Secretariat clarified that no promises could be made however at this stage about the development of bankable projects and access to loans under the activities of Child Project 2.1.
Day 1 Agenda Item 10: Update on the GEF Special Climate Change Fund (SCCF) Project

52. Mr. Matthew Lagod, Consultant for UN Environment/MAP, outlined the progress achieved on the preparation of the SCCF Project and its activities. The SCCF Project will enhance regional adaptation to climate change in Mediterranean marine and coastal areas through four lines of action: (i) stakeholder engagement and capacity building; (ii) application of best practices for climate resilience in the coastal zone; (iii) access to climate financing mechanisms; and (iv) knowledge management and project coordination. The project document for the SCCF Project is complete and will be submitted to UN Environment’s Project Review Committee in October 2018.

Day 2 Agenda Item 1: Update on Child Project 1.1

53. A joint presentation on the development the Child Project 1.1 and its activities was made by representatives of the implementing and executing agencies – Ms. Eloise Touni of the Chemicals and Health Branch/ GEF Team at UN Environment and Ms. Marina Markovic of the UN Environment/ MAP – MED POL. Project activities under the CW component are designed to remove existing stockpiles of persistent organic pollutants (POPs) and mercury, and to prevent the generation of new wastes containing these pollutants. Disposal activities will be carried out in two phases. Phase 1 will target stockpiles verified during the current preparation phase of the project as being ready for immediate disposal, and Phase 2 will entail further inventories and data gathering to identify the remaining stockpiles that can be eliminated to meet the project’s disposal targets. Prevention activities will focus on strategies for avoiding further generation of wastes containing mercury and two types of new POPs (PFOS and HBCD). An additional set of activities will be undertaken under the IW project component to produce an updated TDA for the Mediterranean (including gender assessment), a report on progress to impacts, a data sharing policy and an offshore monitoring strategy. The project document for Child Project 1.1 will be submitted to the GEF for endorsement in December 2018.

54. The representative of Lebanon inquired about the modalities for implementation of the activities, whether the new POPs targeted under the project could be expanded to include other chemicals (such as SCCP, a priority chemical for Lebanon), and also about how countries had been consulted about the International Waters (IW) activities. In terms of implementation modalities, Ms. Touni explained for each Phase 1 disposal site an environmental management plan (EMP) would be developed to establish responsibilities, identify national capacities and determine the need to bring in outside assistance. Regarding the possibility of considering additional new POPs for prevention activities, Ms. Touni indicated that it could be discussed, but recalled the existing proposals for Lebanon were designed to address the POPs identified in the country’s NIP. Regarding the consultations on the IW activities, Ms. Markovic explained the meetings organized within the MAP system were used to consult the Contracting Parties of the Barcelona Convention (on, for example, national needs for IMAP – Integrated Monitoring and Assessment Programme – implementation, indicators and other relevant topics); proceedings of such meetings were used as a starting point in developing relevant sections of the project document. The Secretariat reconfirmed that the countries would have ample opportunity to review and comment on the project document prior to its submission to the GEF.

55. The representative of Egypt recalled that Egypt had expressed interest in participating in the national project activities, and had recently provided UN Environment with its NIP, the list of relevant national institutions and an indication of candidate companies for the development of prevention pilots. The representative of Egypt inquired about how the country could catch
up to the others in the project, about the possibility of reinforcing national capacities, and about the criteria for allocation of funds to the countries. She also expressed interest to receive more information on the forums used to consult the countries on the needs for the development of IW activities, in particular proceedings of the meeting held in July 2018 in Rome on the IMAP implementation. Ms. Touni, taking the questions in turn, explained that Egypt could not participate in Phase 1 for disposal but that this may be possible for Phase 2. In terms of enhancing national capacities, the EMP process for each disposal site will include an assessment of national capacities, and national experts will gain expertise by participating in execution of the EMP and inspection activities under the supervision of UN Environment consultants. Criteria for allocation of resources to priority sites is based on the presence of verified stockpiles that are ready for immediate disposal and also on the co-financing contribution that countries may bring to dispose additional quantities of waste. Priorities for disposal sites will be reviewed each year during the project’s steering committee. Finally, Ms. Markovic assured that the requested information on the Rome meeting deliberations will be shared with the Government of Egypt.

56. The representative of Algeria underlined the importance of the project to the Government of Algeria, its wish to participate in the activities on mercury disposal and its need for capacity building with respect to mercury elimination and implementation of its NAP (National Action Plan). The representative of Algeria also informed participants that experts from UN Environment were currently being hosted in Algeria for a technical mission for the project and that all necessary information would be provided.

57. The representative of Montenegro confirmed that Montenegro’s priorities for the project were well represented in the activities considered for the project, while inquiring whether the priorities for Phase 2 had been confirmed and expressing interest for hearing about possible synergies with Child Project 1.3. Ms. Touni responded that the project document would not make reference to sites for Phase 2. The first step of Phase 2 will be to confirm the presence of the chemicals reported in the national inventories/ accounted for in the project document, followed by decisions about site selection during the second or third steering committee meetings.

58. Mr. Roland Weber, Associated Expert of SCP/RAC, called on the GEF to consider activities on POPs that were not in NIPs but that were particularly dangerous, difficult and expensive to remove, and which are seriously affecting drinking water supplies.

**Day 2 Agenda Item 2: Update on Child Project 1.2**

59. Mr. Mark Pevsner, Senior Advisor – Strategy and Coordination Division Advisory Services Department/Projects Directorate of the European Investment Bank (EIB), explained that the primary objective of Child Project 1.2 is to prepare investments for physical infrastructure projects to reduce the discharges of untreated or partially treated wastewater that impact the sea. The target countries for Child Project 1.2 are Egypt, Lebanon and Tunisia, and the project document is nearly complete. The representative of UN Environment/ MAP – MED POL, Ms. Markovic, presented a component of the project that will support development of regional standards (wastewater management, sludge management, desalinization and aquaculture) for consideration and adoption by the Contracting Parties of the Barcelona Convention.

60. The representative of Tunisia recalled the country’s strong involvement in the project. He asked about developments related to his recommendation (expressed at the First Consultation meeting from March 2018) for a coordinated approach in the implementation of the activities on mercury in Child Projects 1.1 and 1.2, including how Tunisia would benefit from these. Ms. Touni explained that analysis was ongoing about whether mercury activities
originally foreseen under Child Project 1.2 would be taken up by Child Project 1.1, whereas Child Project 1.1 is not aiming to facilitate access to investments for decontamination, but rather focuses on removal of mercury from those countries that had ratified the Minamata Convention. Child Project 1.1 activities in Tunisia will thus be limited to removal of mercury stockpiles. The representative of EIB added that EIB would consider granting a loan for any well-prepared project on mercury decontamination that a country was prepared to undertake. The Secretariat recalled that the priorities of the Child Projects are set in the Programme Framework Document for the MedProgramme approved by the GEF in 2016, and that the first priority is to meet the targets set forth therein for disposal/removal and co-financing.

61. The representative of Lebanon indicated that the country has an important need for wastewater projects and capacity building in this domain, and asked for capacity building activities to be included in the project. Regarding the regional standards to be developed under the project, the representative of Lebanon emphasized the high relevance of regional wastewater and sludge management standards for her country. As regards desalination, the advice was to also take into account/address small and medium sized enterprises in Lebanon and their small-scale desalination capacities.

62. The Chair of GWP Med stated that the Mediterranean region needed active encouragement to shift towards non-conventional water resources, and considered that the regional standards to be developed under the project could contribute to this shift. Ms. Maria Diamanti, Environmental Expert of EIB, agreed that water reuse is important but noted that society’s perception of this was poor. EIB works to raise awareness about the quality of treated wastewater, but ultimately it is a country’s choice to encourage acceptance for the use of treated wastewater. As water becomes more scarce, the public’s opinion about the use of treated wastewater may change. The Chair of GWP Med noted that there has been a rapid shift in the mentality of people regarding non-conventional water resources – including through efforts of religious leaders that have expressed support for the use of these kinds of water resources – and that the partners and countries of the MedProgramme should collectively step up efforts to encourage the use of these resources.

Day 2 Agenda Item 3: Update on Child Project 1.3

63. Two representatives of European Bank for Reconstruction and Development (EBRD) – Ms. Astrid Motta, Principal, Energy Efficiency and Climate Change, and Ms. Claudia Neuschulz, Analyst – presented the progress on the development of activities for Child Project 1.3, which is designed to reduce land-based sources of pollution in hotspots through a combination of technical assistance and investment grants to rehabilitate wastewater treatment plants and increase the volume of wastewater treated in the region. Under the CW component of the project, activities are being developed aiming to reduce and prevent 1,250 t of POPs. Like UN Environment, EBRD is an accredited GEF agency and has its own modalities for project preparation. EBRD intends to submit the project document for Child Project 1.3 to the GEF by December 2018.

64. Two examples of existing on-the-ground support from EBRB were presented. The first is a technology transfer platform designed to assist countries adopt best technologies; EBRD provides a loan to the countries to finance the implementation of the technology and countries later recover up to 25% of the loan from grants. The second example is an infrastructure project preparation facility.

65. The representative of Egypt inquired about the business model for the implementation of Child Project 1.3. Ms. Motta indicated that the project will be implemented through a combination of technical assistance and investment grants. EBRD assists companies to
identify the best technologies for their needs and proposes loans to enable companies to finance implementation of these technologies (for example to shift to PBC-free production methods, to promote water efficiency, ...). Following successful implementation of the technologies, EBRD will reimburse a portion of the implementation cost. Countries are eligible for this assistance only if they are bankable (i.e., able to borrow money).

66. The representative of Lebanon asked for clarification about the specific activities foreseen in the project. The Secretariat responded that a portfolio of potential investments will be developed during the project preparation phase, but that it was not possible to commit to specific investments at present. The Secretariat also recalled that EBRD is an implementing agency of the GEF and as a development bank, has different working modalities than UN Environment regarding budgeting, reporting and execution of activities. In the MedProgramme, EBRD will also have its own project management budget which is separate from that of UN Environment. The management of projects in the UN Environment portfolio will be ensured through Child Project 4.1.

67. In response to a question from the representative of Egypt, the Secretariat clarified that the GEF funds provided for Child Project 1.3 are not for loans but rather for pre-investment studies to prepare investments. The representative of the GEF confirmed that the GEF provides seed money to institutions that can scale-up investments to deliver global environmental benefits.

68. The representative of Montenegro inquired about the consultations with countries for Child Project 1.3 that were announced during the First Regional Consultation, and indicated that the Government needed more details about activities (including on possible synergies between Child Projects 1.1 and 1.3) before preparing its letter of co-financing. The representative of EBRD explained that the consultations will take place in the coming weeks to inform the countries about the potential activities and the opportunities for investments/loans in the context of this project.

69. The representative of Tunisia asked whether the technical assistance activities of the project included pilot projects for the private sector to demonstrate the effectiveness of new technologies. The representative of EBRD confirmed that demonstration of new technologies is one of the key objectives for this work and that pilot projects could be financed.

Day 2 Agenda Item 4: Update on Child Project 3.1

70. Mr. Atef Limam, MedMPAnet Project Officer at SPA/RAC, described the main lines of action for Child Project 3.1, a project devoted to enhancing the management of Marine Protected Areas (MPAs) in Libya. These include capacity building for managers of MPAs in Libya, the revision of Libya’s National Strategy on MPAs and its draft law on protected areas, and an inventory of marine and coastal sites of ecological importance. A consultation with Libyan stakeholders is planned for October 2018, and the project document will be submitted to the GEF in December 2018.

71. Mr. Mustafa Soliman, the GEF Operational Focal Point for Libya (hereafter the representative of Libya), indicated satisfaction with the proposed intervention in Libya and positive anticipation about the implementation of activities on the ground. Regarding the consultation with Libyan stakeholders, the representative of Libya indicated that his presence will be beneficial and that he will also extend the invitation to the Environment General Authority.

72. In response to a question raised about the possibility of MPAs imposing on navigation rights in the high seas, the representative of SPA/RAC confirmed that none of the MPAs in Libya are beyond national jurisdiction. However, efforts are underway in the context of the Barcelona
Convention to create a framework for the creation of MPAs that are beyond national jurisdiction.

**Day 2 Agenda Item 5: Update on Child Project 2.2**

73. Mr. Dimitris Faloutsos, Deputy Regional Coordinator of GWP Med, provided an overview of the design of activities for Child Project 2.2 and recalled its overarching objective: fostering water-food-energy security and the reduction of land based nutrient pollution and other pressures, through the adoption of the water-food-energy-ecosystems nexus approach. The project activities will follow four main lines of action: strengthening the capacities of institutions on the nexus approach; addressing nexus issues affecting the Mediterranean Sea LME; testing and upscaling nexus solutions; and engaging stakeholders in these processes. A consultation with the participating countries to confirm interest and priorities in the project will be organized in Beirut, Lebanon on the sidelines of the First MENA Nexus Roundtable that will take place from 26-28 November 2018.

**Day 2 Agenda Item 6: Discussion**

74. In summary, the representatives of Albania, Algeria, Bosnia and Herzegovina, Egypt, Lebanon, Libya, Montenegro and Tunisia confirmed the importance of the MedProgramme for their countries and for the region, and endorsed the proposals of UN Environment/MAP on (i) the timeline for finalization of the Child Projects of the MedProgramme and their submission to the GEF Secretariat for endorsement; (ii) the development of the overarching strategies for Knowledge Management and Gender Mainstreaming; and (iii) the arrangements for execution of the MedProgramme through the MedProgramme Coordinating Unit (Med PCU).

75. Ms. Jula Selmani, the representative of the GEF Operational Focal Point of Albania (hereafter the representative of Albania), congratulated the partners and acknowledged the excellent quality of the workshop. She also indicated that although she had not been involved in the previous meetings and the development of the MedProgramme, she now had a clear vision of the process, thanks to the organization of the consultation. In closing, the representative of Albania declared that the strategy for the implementation of the MedProgramme appeared to be effective and would serve the needs of the countries.

76. The representative of Algeria asserted that the MedProgramme is an important opportunity for the region and predicted that it would result in success for countries and partners alike. She emphasized that the effective coordination among the countries and project partners during the preparation phase of the MedProgramme represented a positive start to the process. The representative of Algeria also announced that a coordination mechanism at the national level in Algeria will be implemented to ensure effective interaction with the regional coordination mechanism of the MedProgramme. In closing, the representative of Algeria confirmed that the country is committed to involving government institutions, the private sector and the media in the MedProgramme, and thanked the partners and the GEF for their assistance in depolluting the Mediterranean Sea.

77. Mr. Senad Opravić, the GEF Operational Focal Point of Bosnia and Herzegovina (hereafter the representative of Bosnia and Herzegovina) thanked the partners for the excellent presentations and asserted that the two regional consultations had provided a solid foundation for the effective implementation of the projects of the MedProgramme. He furthermore recalled the priority that the Government of Bosnia and Herzegovina places on the alignment of all activities and results of the MedProgramme with national legislation, EU Directives and the requirements of EU acquis, as well as the SDGs. In closing, the
representative of Bosnia and Herzegovina wished success to all partners for the implementation of activities, and thanked UNESCO for hosting the meeting.

78. The representative of Egypt thanked the partners for the meeting and confirmed that the presentations had provided a clear indication of the links between the projects and how the MedProgramme is being implemented in a holistic manner. She promised to work to ensure effective communication among national partners involved in the activities, and expressed satisfaction with the fact that the countries sharing the Mediterranean were sitting around the same table and working together for the common good of the Sea. In closing, the representative of Egypt indicated her interest in the implementation of the Knowledge Management and Gender Mainstreaming Strategies and indicated her belief that these will assist countries in dealing with environmental challenges.

79. The representative of Lebanon thanked the partners for a fruitful meeting and reconfirmed the country’s commitment to contribute to the MedProgramme and to share the necessary knowledge and information to support its successful execution. She underlined the importance of involving national stakeholders, of ensuring effective coordination and management, and of seeking synergies in the MedProgramme. In closing, the representative of Lebanon expressed her satisfaction with the progress achieved to date, and her positive anticipation for the initiation of the activities of the MedProgramme.

80. The representative of Libya recognized the partners for the progress achieved on the preparation of the MedProgramme, and confirmed that the consultation had been extremely useful for gaining a deeper understanding of the activities and how they will be carried out. He furthermore expressed appreciation for the chance to cooperate with the other countries in the region on the protection of the Mediterranean Sea. At the same time, the representative of Libya shared his concern about the MedProgramme’s integrated approach to environmental challenges spanning several GEF focal areas, indicating that this can complicate activities on the ground. In closing, the representative of Libya wished all the partners success in the execution of their activities.

81. The representative of Montenegro thanked the partners for the all the work completed to date, and recalled that one of the benefits of a regional programme is the opportunity for activities covering many thematic areas at both the national and regional levels, which has great value for the countries. She recalled that Montenegro is in the stage of pre-accession to the EU and does not have the resources to finance all the corresponding obligations, and that for this reason it is important to identify additional sources of assistance. Besides the MedProgramme, the Government of Montenegro is also participating in the GEF Adriatic Project and the UN Environment Vienna biodiversity assessment in coastal and marine areas, which will lead to the establishment of three new MPAs in Montenegro. The representative of Montenegro also highlighted the synergies that were identified during the design of the MedProgramme, and notably the integration of activities between Child Project 2.1 and the SCCF Project in Montenegro, maintaining that without a programmatic approach this kind of synergy and integration would not have occurred. In closing, the representative of Montenegro acknowledged the effectiveness of the programmatic approach in terms of communication with partners on the design of activities, and her interest in the future implementation of the Knowledge Management and the Gender Mainstreaming Strategies.

82. The representative of Tunisia thanked the MedProgramme team for the progress achieved on the preparation of the projects and recalled the contributions of Tunisia throughout the process. He also underlined the importance of initiating efforts to establish the implementing modalities at the national level with the relevant institutions to avoid delays and to ensure that the objectives of the MedProgramme are achieved. In closing, the representative of Tunisia
stressed the need to identify synergies and complementarities among the activities of the MedProgramme, and more importantly, with other ongoing and future initiative in the region, such as Horizon 2020 and post-Horizon 2020 activities.

**Day 2 Agenda Item 7: Conclusions and closing of the meeting**

83. The Secretariat presented the conclusions and next steps recorded during the proceedings of the Second Regional Consultation and asked the GEF Operational Focal Points (or their representatives) for their comments and approval. The GEF Operational Focal Points (or their representatives) endorsed these conclusions and approved the next steps, which appear on page 1 of the present report.

84. The Coordinator of the UN Environment/MAP-Barcelona Convention Secretariat declared that the presentations and discussions had been illuminating and had helped to clarify for everyone once again the importance of the MedProgramme and the complex challenges that would be tackled by this ambitious and innovative joint initiative. He asserted that the overall level of buy-in and interest are high for the MedProgramme and assured that all the concerns raised by the Contracting Parties would be duly addressed in the final project documents, prior to their submission to the GEF Secretariat. The Coordinator thanked all participants for their continued commitment of energy, time and resources and expressed positive anticipation for the continued collaboration. In closing, the Coordinator recognized the contributions of the countries, the partners, the UN Environment team, the GEF and UNESCO, a gracious host for the event and an important partner of the programme.

85. The representative of UNESCO IHP expressed UNESCO’s pleasure in hosting the participants of the consultation. Recalling that 21 September is the International Day of Peace, the representative of UNESCO IHP explained that people of all cultures and beliefs were present at UNESCO on this day to discuss peace, and declared that peace can also be built on science and environmental sustainability.

86. The Second Regional Consultation for the MedProgramme was closed at 17.00 on 21 September 2018.
## Annex 1

### Agenda of the Second Regional Consultation of the MedProgramme

#### Day 1: 20 September 2018

<table>

## Annex S: Expected Program Level Outcomes at PFD Council Approval Stage vs. CEO Endorsement Stage

<table>
<thead>
<tr>
<th>Child Project</th>
<th>Outcome PFD Stage</th>
<th>Outcome GEF CEO Stage</th>
<th>Analysis</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.1 Reducing Pollution from Harmful Chemicals and Wastes in Mediterranean Hotspots and Measuring Progress to Impacts</strong></td>
<td><strong>PFD Outcome 1:</strong> In coastal hot spots and catchment areas, measurable reduction of harmful chemicals and wastes (POPs, Mercury) and of excess nutrients impacting human health and coastal habitats, achieved.</td>
<td><strong>CP1.1 Outcome 1:</strong> Reduction of wastes and hazardous chemicals (POPs and mercury) in coastal hotspots</td>
<td>CP1.1 Outcome 1 answers to the indicators (i) and (ii) of the PFD Outcome 1. These 2 indicators are related to the elimination or reduction of POPs and Hg.</td>
</tr>
<tr>
<td></td>
<td><strong>PFD Outcome 3:</strong> Littoral countries enabled to identify trends and progress to impacts.</td>
<td><strong>CP 1.1 Outcome 2:</strong> Littoral countries enabled to identify trends and progress to impacts.</td>
<td>CP1.1 Outcome 2 answers to the 4 indicators of the PFD Outcome 3.</td>
</tr>
<tr>
<td></td>
<td><strong>PFD Outcome 8:</strong> The increased uptake of lessons and of cutting-edge knowledge generated across the portfolio of interventions, and the active participation to IW LEARN activities, Communities of Practice, and events, improve the capacity of key regional stakeholders, and of the global IW community to build climate resilience, maintain coastal resources, protect biodiversity, and restore coastal ecosystems. Emphasis will be placed on fostering uptake and replication at the regional level of successful policies, practices and technologies implemented under the Programme through ad hoc awareness raising activities and tools: videos, manuals, progress reports, a MedProgramme Bulletin, a “Replication Atlas” highlighting areas and situations where replication of the Programme’s demonstrations should preferentially occur. These tools will target decision makers and practitioners in the Programme countries, IFIs active in the region, the private sector, and regional cooperation entities.</td>
<td><strong>CP 1.1 Outcome 3:</strong> Project results and knowledge are effectively disseminated and used to adaptively manage the project.</td>
<td>CP1.1 Outcome 3 answers to the indicators (i) and (ii) of the PFD Outcome 8. These 2 indicators are related to ‘Number of experience notes and scientific publications documenting the knowledge generated across the portfolio of interventions’ and to the ‘Number of awareness raising communication tools at regional and global levels on the objectives, progress and accomplishments of the Programme’</td>
</tr>
<tr>
<td><strong>1.2 Mediterranean Pollution Hot Spots Investment Project.</strong></td>
<td><strong>PFD Outcome 1:</strong> Investments in upgrading WWTPs and reusing of treated wastewater, and/or remediation of former industrial sites, and/or depollution of catchment area in Egypt, Lebanon and Tunisia are secured through strengthened capacity and increased country commitments.</td>
<td><strong>CP1.2 Outcome 1:</strong> In coastal hot spots and catchment areas, measurable reduction of harmful chemicals and wastes (POPs, Mercury) and of excess nutrients impacting human health and coastal habitats, achieved.</td>
<td>CP1.2 Outcome 1 answers to the indicator (iii) of the PFD Outcome 1. This indicator is related to the ‘WWTP extension and upgrade including treated wastewater reuse/reinjection and depollution of catchment areas in priority coastal hotspots’</td>
</tr>
<tr>
<td>2.1 Mediterranean Coastal Zones: Water Security, Climate Resilience and Habitat Protection.</td>
<td>CP1.2 Outcome 2: Effectiveness of environmental management by the Contracting Parties to the Barcelona Convention increased through the development of common environmental standards on desalination, aquaculture, and wastewater and sludge management.</td>
<td>CP1.2 Outcome 1 answers to the indicator (iv) of the PFD Outcome 1. This indicator is related to the ‘Common regional standards on wastewater and sludge management and reuse, developed’. PS: The standard on desalination will be developed by using NON-GEF funds.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td>PFD Outcome 4: Coastal zone sustainability enhanced through the adoption of comprehensive national ICZM strategies, coastal plans and instruments, and the introduction of sustainable consumption and production (SCP) technical, regulatory, economic and market-oriented measures and improving gender equality.</td>
<td>CP2.1 Outcome 1: Coastal zone sustainability in beneficiary countries enhanced through the expanded compliance with the ICZM Protocol and the adoption of national ICZM strategies, coastal plans and instruments, and improved gender equality.</td>
<td>CP2.1 Outcome 1 answers to the indicators (i), (ii), (iii) and (iv) of the PFD Outcome 4.</td>
<td></td>
</tr>
<tr>
<td>PFD Outcome 5: Increased resilience to climatic variability and change, and enhanced water security of coastal populations through improved sustainability of services provided by coastal aquifers and by groundwater related coastal habitats.</td>
<td>CP2.1 Outcome 2: Increased resilience to climatic variability and change, and enhanced water security of coastal populations through improved sustainability of services provided by coastal aquifers and by groundwater-related coastal habitats.</td>
<td>CP2.1 Outcome 2 answers to the indicators (i), (ii) and (iii) of the PFD Outcome 5.</td>
<td></td>
</tr>
<tr>
<td>CP2.2 Mediterranean Coastal Zones: Managing the Water-Energy-Food and Ecosystems Nexus.</td>
<td>PFD Outcome 6: Balancing of competing water uses improved through water, food, energy and ecosystems integrated governance.</td>
<td>CP2.2 Outcome 1: Enhanced regional and National capacities on the use of the nexus approach to address land-based issues. CP2.2 Outcome 2: Interlinkages among Nexus Sectors identified and strengthened through Nexus Assessments and Policy Dialogues, feeding into policy making in priority Mediterranean coastal areas. CP2.2 Outcome 3: Interventions facilitated and upscaled bringing co-benefits by maximizing on the technologies and</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td>CP2.2 Outcome 1 to 5 answer to the indicators (i), (ii) and (iii) of the PFD Outcome 6. Due to the complexity of the NEXUS process in the region, during the project preparation, choice was made to breakdown the PFD’s Outcome 6 into more detailed Outcomes which would be more easily manageable and monitored during the project execution. These outcomes will achieve exactly the same targets approved by the GEF Council.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3.1 Management Support and Expansion of Marine Protected Areas in Libya.</td>
<td><strong>PFD Outcome 7:</strong> Expansion of seascapes under protection in Libya, and improved protected area management through the implementation of the Libyan Marine Protected Areas (MPA) National Strategy, mapping of marine key habitats, monitoring of marine megafauna (mammals, seabirds, turtles and cartilaginous fishes), capacity support mechanisms and adoption of permanent solutions.</td>
<td><strong>CP2.2 Outcome 4:</strong> Priority nexus interventions agreed upon including relevant mechanisms and arrangements. <strong>CP2.2 Outcome 5:</strong> The medium and long-term sustainability of results ensured by engaging the relevant stakeholders.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>CP3.1 Outcome 1:</strong> Protection of marine biodiversity in Libya’s Marine Protected Areas is enhanced through the development of an MPA governance structure at the national level and supported through new on-site management units, sustainable management plans and monitoring programmes and networks. <strong>CP3.1 Outcome 2:</strong> The governance and sustainable management of MPAs is reinforced through the increased participation of Libyan stakeholders and strengthening of institutional capacities on MPA management and related monitoring activities. <strong>CP3.1 Outcome 3:</strong> Awareness of the value and importance of MPAs is raised at the national level, as a further means of strengthening MPA governance and management. <strong>CP3.1 Outcome 1 answers to the indicators (i), (ii), (iii), (iv) and (v) of the PFD Outcome 7.</strong> <strong>CP3.1 Outcome 2 answers to the indicators (i), (ii), (iii), (iv) and (v) of the PFD Outcome 7.</strong> <strong>CP3.1 Outcome 3 answers to the indicator (vi) of the PFD Outcome 7.</strong></td>
<td></td>
</tr>
<tr>
<td>4.1 Mediterranean Sea Large Marine Ecosystem Environment and Climate Regional Support Project</td>
<td><strong>PFD Outcome 8:</strong> The increased uptake of lessons and of cutting-edge knowledge generated across the portfolio of interventions, and the active participation to IW LEARN activities, Communities of Practice, and events, improve the capacity of key regional stakeholders, and of the global IW community to build climate resilience, maintain coastal resources, protect biodiversity, and restore coastal ecosystems. Emphasis will be placed on fostering uptake and replication at the regional level of successful policies,</td>
<td><strong>CP4.1 Outcome 1:</strong> The increased uptake of the lessons and of the cutting-edge knowledge generated across the portfolio of MedProgramme interventions, and the active participation in IW: LEARN activities, Communities of Practice, and events, improve the capacity of key regional stakeholders, and of the global IW</td>
<td></td>
</tr>
</tbody>
</table>
| | | **CP4.1 Outcome 1 answers to the indicators (i) and (ii) of the PFD Outcome 8. </tr>
<tr>
<td><strong>AQUACROSS</strong>&lt;br&gt;http:// &lt;br&gt;stationalaplacross.eu</td>
<td>Executing Partners: &lt;br&gt; IOC UNESCO</td>
<td>Activity Period: 2010 - ongoing</td>
<td>AQUACROSS Information Platform aims to provide open access to a wide range of resources related to aquatic freshwater, marine and coastal ecosystems and biodiversity management. The primary focus is on data used in the MEDWARE project. Data includes and metadata and tools.</td>
</tr>
<tr>
<td><strong>Biodiversity Information System for Europe (BISE)</strong>&lt;br&gt;<a href="http://www.europeanenvironment.org">http://www.europeanenvironment.org</a></td>
<td>Executing Partners: &lt;br&gt; UEM, EU&lt;br&gt; Commission: BB&lt;br&gt; ICM</td>
<td>Activity Period: 2014 - ongoing</td>
<td>BISE is a single entry point for data and information on biodiversity supporting the implementation of the EU strategy and the Aichi targets in Europe.</td>
</tr>
<tr>
<td><strong>Climate-ADAPT</strong>&lt;br&gt;<a href="https://climate-adapt.eea.europa.eu">https://climate-adapt.eea.europa.eu</a></td>
<td>Executing Partners: &lt;br&gt; EU Commission&lt;br&gt; Environment Agency</td>
<td>Activity Period: 2012 - ongoing</td>
<td>Climate-ADAPT aims to support Europe in adapting to climate change. It is an initiative of the European Commission and helps users to access and analyze data on climate change in Europe. Current and future impact of extreme events; EU, national and transnational adaptation strategies and actions. Adaptation case studies and potential adaptation options. Tools that support adaptation planning.</td>
</tr>
<tr>
<td><strong>COPERNICUS</strong>&lt;br&gt;Maine Environment Monitoring Service&lt;br&gt;<a href="http://www.copernicus.eu">http://www.copernicus.eu</a></td>
<td>Executing Partners: &lt;br&gt; EU Commission&lt;br&gt; Marine Environment Monitoring Service&lt;br&gt;</td>
<td>Activity Period: 2015 - ongoing</td>
<td>COPERNICUS Marine Environment Monitoring Service (CMEMS) provides regular and systematic reference information on the physical state, variability and dynamics of the oceans and marine ecosystems for the global ocean and the European regional seas.</td>
</tr>
<tr>
<td><strong>COPERNICUS Land Monitoring Service</strong>&lt;br&gt;<a href="http://www.copernicus.eu">http://www.copernicus.eu</a></td>
<td>Executing Partners: &lt;br&gt; EU Commission&lt;br&gt;</td>
<td>Activity Period: 2015 - ongoing</td>
<td>COPERNICUS Land Monitoring Service (CLMS) provides geographical information on land cover to a broad range of users in the field of environment restoration applications. This includes land use, land cover characteristics and changes, vegetation status, water cycle and earth surface energy variables.</td>
</tr>

**Executing Partners:**
- UNESCO Chair on Network for Environment, University of the Philippines
- ICZM Platform
  - http://www.iczm-institute.org
- IMPA Info Pilot System
  - Available under development as of 11/2012
- INSPIRE: Knowledge Base
  - https://inspire.ec.europa.eu
- INTEGRATED COASTAL WATER MANAGEMENT FOR MED (ICWM)
- IODE
  - http://www.iode.org

**Geographical Area:** Mediterranean Area

**Activity Period:** 2003 - 2016

**Description:** The UNESCO Chair on Network for Environment, University of the Philippines, the ICZM Platform, the IMPA Info Pilot System, the INSPIRE: Knowledge Base, the INTEGRATED COASTAL WATER MANAGEMENT FOR MED (ICWM), and IODE are implementing the Mediterranean Sea Large Marine Ecosystem Environment and Climate Regional Support Project (CP 4.1). The project aims to enhance marine research, exploitation, and development, by facilitating the exchange of oceanographic data and information between participating Member States, and by involving the needs of users for data and information products.
### Endorsement Template: Mediterranean Sea Large Marine Ecosystem Environment and Climate Support Project (CP 4.1)

**Geographical area:** Global

**Endorsement:**

**Executive Partner:** UNDP, UN Environment

**Activity Period:** 2011 - ongoing

**Description:** UNDP is a global environmental facility that supports the implementation of the GEF's Environment and Climate Support Project in the Mediterranean Sea. The project aims to address key environmental challenges, such as climate change, biodiversity loss, and sustainable use of marine resources.

**Contact Person:** [Contact Information]

Box 1 Overview of the objectives of the GEF Focal Areas addressed by the MedProgramme

**GLOBAL BENEFITS**

**International Waters Focal Area** - The goal of the International Waters Focal Area is to foster collective management for transboundary water systems and facilitate implementation of the full range of policy, legal, and institutional reforms and investments contributing to sustainable use and maintenance of water dependent ecosystem services.

**Chemicals and Waste Focal Area** - The goal of the Chemicals and Waste Focal Area is to prevent the exposure of humans and the environment to harmful chemicals and waste of global importance, including POPs, mercury and ozone depleting substances, through a significant reduction in the production, use, consumption and emissions/releases of those chemicals and waste.

**Biodiversity Focal Area** - The goal of the Biodiversity Focal Area is to maintain globally significant biodiversity and the ecosystem goods and services that it provides to society. It includes focus on the establishment and effective management of coastal and near shore protected area networks to increase the representation of globally significant marine ecosystems in protected area systems.

**Climate Change Focal Area:** The goals of the Climate Change Focal Area are to reduce the vulnerability of people, livelihoods, physical assets and natural systems to the adverse effects of climate change; strengthen institutional and technical capacities for effective climate change adaptation; and integrate climate change adaptation into relevant policies, plans and associated processes.

Box 2 The gender mainstreaming approach of the MedProgramme

The **Gender Mainstreaming Strategy of MedProgramme** adopts a transformative approach, positing a gender equality vision for the MedProgramme that questions established categories and implements positive action measures towards gender-responsive actions in the Mediterranean region. In effect, gender mainstreaming is not an end (goal) of the MedProgramme—rather, a means (process) to an end (greater gender equality). This approach reflects also the normative standards defined by the European Institute for Gender Equality (EIGE), which stipulates the importance of identifying gender mainstreaming as a process because it:

“*Ensures that policy-making and legislative work is of higher quality and has a greater relevance for society, because it makes policies respond more effectively to the needs of all citizens – women and men, girls and boys. Gender mainstreaming makes public interventions more effective and ensures that inequalities are not perpetuated. It does not only aim to avoid the creation or reinforcement of inequalities, which can have adverse effects on both women and men. It also implies analyzing the existing situation, with the purpose of identifying inequalities, and developing policies which aim to redress these inequalities, and undo the mechanisms that caused them*”.
