

MALAYSIA'S WRITTEN STATEMENT FOR AHEG4
11 November 2020

Statement at AHEG for Agenda Item 4 (b) Identification of technical and financial resources or mechanisms

Technical resources and mechanisms are meaningful input for policy formulation and implementation. Guidelines, best practices, forecasting and monitoring models, and sharable database will be extremely useful in strategizing efficient actions and collaborations at both regional and global level in addressing marine plastic litter and microplastics,

Malaysia agrees that financial resources and mechanisms are important as adoption of policy instruments and technology will require huge financial commitments.
