

Motivating Career Opportunities in Managing Refrigerants

UNEP OzonAction Webinar
At 2021 World Refrigeration Day
(WRD-21)

28th June 2021
2:00-3:30 pm (CET, Paris Time)

Programme

Opening

- **James Curlin**
Acting Head, OzonAction – Law Division (UNEP)
- **Stephan Gill**
Director, World Refrigeration Day (WRD) Secretariat

Careers offered through enacting standards/codes

- **Marco Buoni**
President, European Association of RACHP Contractors (AREA)
- **Alaa Olama**
Head of Refrigerant Code Committee, Egypt

Opportunities through managing refrigerants in the field

- **Hasan Mubarak**
National Ozone Officer, Bahrain
- **Ronald Viskil**
International Expert, The Netherlands

Advancing careers through training and certification

- **Ade Awujoola**
Refrigeration and Air-Conditioning Expert, Nigeria
- **Manuel Azucena**
Refrigeration and Air-Conditioning Expert, Philippines

Plenary Discussion

Webinar Moderator
Ayman Eltalouny

International Partnership Coordinator, OzonAction - UNEP

Over the last three decades, the Montreal Protocol promoted the concept of refrigerant management as an integrated approach for controlling and minimizing unwanted emissions and consumption of refrigerants especially when servicing refrigeration and air conditioning applications and systems. The concept, as supported and funded by the Multilateral Fund of the Montreal Protocol, offered new businesses and areas that require professional and competent personnel to ensure the efficient operation of the relevant refrigerant management schemes and strategies being implemented by countries or industry.

Within the celebrations of the 2021 World Refrigeration Day (WRD); UNEP OzonAction is organizing this event to share experiences and success stories from different regions about how the management of refrigerants can offer opportunities for industry and individuals.

This session will offer details about opportunities for individuals and industry in creating jobs and new business lines associated with the areas of enacting relevant codes and standards, refrigerant management operations while servicing HVACR applications including recovery/recycling/reclamation, and the training/certification programs for the servicing technicians and practitioners.
