Note from the UNEA-5 Presidency on the draft Ministerial Declaration for the resumed session of the fifth session of United Nations Environment Assembly

The aim of this note is to provide an update on the process to develop a draft ministerial declaration for the resumed fifth session of the United Nations Environment Assembly (UNEA-5), and to provide an update on the timeline for further consultations.

The UNEA-5 Presidency is very grateful to all Member States and Stakeholders who have provided written inputs to the zero draft declaration in the past weeks. Based on a thorough review of the inputs received by 2 December 2021, the Presidency has developed a first full draft declaration.

The Presidency acknowledges with appreciation that many Member States have provided inputs along similar lines. When reflecting these ideas, the Presidency has sought to consolidate similar substantive ideas into one or two paragraphs, to improve clarity and avoid duplicative messages in several different paragraphs.

The UNEA-5 Presidency initiated the preparations for the UNEA-5 Ministerial declaration already in April 2020. After two rounds of written inputs from member States and stakeholders, an initial zero draft was presented to the UNEA Bureau in October 2020. Due to the COVID 19 pandemic, and the decision to organize UNEA-5 in two segments, the consultation process for the ministerial declaration was put on hold. Instead, the online session of UNEA-5 successfully endorsed a set of important consensual messages. At the joint meeting of the UNEA and CPR Bureaux in June 2021, the UNEA President announced that a new, updated draft would be made available at the end of September.

On 29 September, the updated zero draft ministerial declaration was shared with the UNEA Bureau. The text was discussed at the UNEA Bureau Meeting on 6 October and then circulated to all member states on 8 October. The deadline for the submission of inputs to the zero draft was set to 23 November and, upon request by some Member States, was extended to 30 November.

All relevant information, including written inputs form Member States and Stakeholders, have been made available on the dedicated website for the Ministerial Declaration.

Based on the received inputs and comments from Member States and Stakeholders, the UNEA-5 Presidency is pleased to present the first full draft version of the Ministerial Declaration, as attached to this note. The vision of the document remains the same – namely, that urgent and transformative actions to halt and reverse the loss of biodiversity and ecosystem services are fundamental to achieve the Sustainable Development Goals and rebuild a resilient and sustainable post-pandemic world. We thank all Member States and Stakeholders who have contributed, and regret that it has not been possible to include all suggestions received in full. Nevertheless, efforts have been made to capture most, if not all, of the main points that have been put forward in writing, in a transparent and balanced manner. New wording compared to the zero draft have been marked in bold.
We consider the following to be the most important adjustments related to the previous zero draft:

- Some of the previous placeholders have been replaced with text suggestions, inter alia building on the outcome of UNFCCC COP 27 in Glasgow. Other placeholders, such as on plastic pollution and on the theme for UNEP@50, still remain.
- New references to the special session UNEP@50 and the Stockholm+50 meeting have been added.
- Adjustments have been made in many paragraphs to reflect enriching suggestions by various Members States and Stakeholders. This includes a few last-minute amendments that have been added to reflect inputs from a limited number of member states that had not been considered in time for the bureau meeting, due to technical issues. These amendments have been reflected in paragraphs 4, 6, 13, 17, as well as in a new para 18 on land degradation.

**Proposed timeline for the consultation process for the Ministerial Declaration**

**Annex:** Draft Ministerial declaration of the United Nations Environment Assembly at its resumed fifth session “Strengthening Actions for Nature to Achieve the Sustainable Development Goals”
1. We, the world’s Ministers for the Environment, have gathered in Nairobi, Kenya, together with international organizations, major groups and stakeholders at the fifth session of the United Nations Environment Assembly, under exceptional circumstances created by the COVID-19 pandemic, with the aim to strengthen actions for nature to achieve the Sustainable Development Goals.

2. We recall the United Nations Conference on the Human Environment held in Stockholm, Sweden, in June 1972, the United Nations Conference on Environment and Development, held in Rio de Janeiro, Brazil, in June 1992, and the United Nations Conference on Sustainable Development, held in Rio de Janeiro, Brazil, in June 2012, and its outcome document “The Future We Want”, and reaffirm our commitment to the implementation of the environmental dimension of the three dimensions of the Sustainable Development Goals in a balanced and integrated manner and General Assembly resolution 70/1 of 25 September 2015, entitled “Transforming our world: the 2030 Agenda for Sustainable Development”, and we recall that eradicating poverty in all its forms and dimensions, including extreme poverty, is the greatest global challenge and an indispensable requirement for sustainable development.

2. We recall the 30th anniversary of the Rio Declaration on Environment and Development and we reaffirm its principles and their important role in guiding our efforts towards sustainable development.

3. We are deeply concerned about the devastating impacts of the COVID-19 pandemic on human lives and health, economies and societies, in particular in developing countries, further threatening our ability to achieve the 2030 Agenda for Sustainable Development and the Sustainable Development Goals and are aware that we face heightened risks of future pandemics and other health threats if we maintain the current patterns of interaction with nature and do not take a One Health approach moving forwards and if we fail to address the social, environmental and economic challenges of our societies and enhance international cooperation, and we recognize the potential benefits of One Health approaches, amongst other holistic approaches, to improve several aspects of human health and well-being alongside animal and plant health.

4. We recognize that a healthy nature, the conservation and sustainable use of natural resources and the adequate provision of ecosystem services are required for sustainable development in all its dimensions, and that the wellbeing of humanity depends on nature, and on the services it provides for poverty eradication, resilience, our health, economy and ultimately our existence, while the achievement of the 2030 Agenda for Sustainable Development and its Sustainable Development Goals, including by addressing our social and economic challenges, such as eradicating poverty, addressing social and economic inequalities and tackling food insecurity, is essential to strengthen conservation and sustainable use policies.

5. We note therefore with profound concern that nature is facing severe pressures from unsustainable human activities, and stress the urgent need to halt the global decline and fragmentation of biodiversity and habitats, the loss of biodiversity, which is unprecedented in human history, its main indirect and direct drivers being changes in land and sea use, direct exploitation of organisms, unsustainable consumption and production patterns, climate change, invasive alien species and pollution of ocean and fresh water, air, and soil.

6. We note with further grave concern that the 2020 goal for the sound management of chemicals, agreed under the Strategic Approach to international Chemicals Management
SAICM), has not been achieved with pollution and adverse effects of chemicals and waste thus remaining a threat to the environment and our health, and has been further aggravated by the COVID-19 pandemic due to increased demand for single-use plastics related to health protection. We also take note of the main findings of the Global Chemicals Outlook II, including on the need to match to scale-up financial and technical support for developing countries and economies in transition for building basic chemicals and waste management systems.

7. We recognize the need for transformative and systemic changes and for policies that address several environmental, social and economic and societal challenges simultaneously, rechanneling financial flows through innovative holistic approaches that truly value nature, ecosystem services, and we acknowledge the need for innovative financial mechanisms to stimulate the conservation and sustainable use of biodiversity and the adequate provision of ecosystem services, such as payments for ecosystem services schemes.

8. We are encouraged by the strength of innovation, knowledge building, and investment in green and sustainable technologies and in bioeconomy currently taking place which indicate that solutions exist or can be found that can benefit all countries and we recognize the need of enhanced international cooperation to support developing countries and enable those countries to access capacity building, technical and scientific cooperation and technology transfer initiatives and partnerships.

9. We welcome the outcomes of COP 26, including adoption of the Glasgow Climate Pact, which recognized the need to urgently curb emissions from fossil fuels, as well as the critical role of protecting, conserving and restoring nature and ecosystems in delivering benefits for climate adaptation and mitigation while ensuring social and environmental safeguards.

10. We welcome the outcomes of COP 26, including adoption of the Glasgow Climate Pact, that recognized the critical role of protecting, conserving and restoring nature and ecosystems in delivering benefits for climate adaptation and mitigation, while ensuring social and environmental safeguards.

11. We welcome the outcomes of the Kunming Declaration from the High-Level Segment of the UN Biodiversity Conference 2020 (part 1) first part of the XV Conference of the Parties to the Convention on Biological Diversity, held in October, 2021, under the theme “Ecological Civilization: Building a Shared Future for All Life on Earth”.

12. We welcome and express our support for the upcoming Special Session of the United Nations Environment Assembly [PLACEHOLDER under the theme...] to commemorate the 50th anniversary of the creation of UNEP by the United Nations Conference on the Human Environment, to be held in Nairobi, Kenya on 3-4 March 2022.

13. We commit to supporting an inclusive and sustainable recovery, promoting a green and just transition, accelerating a just transition towards the achievement of the 2030 Agenda for Sustainable Development and its SDGs and the implementation of MEAs and promoting green jobs, with the goal of revitalizing our economies and livelihoods, redressing persistent inequalities between developed and developing countries, contributing to poverty eradication, by mainstreaming biodiversity, climate and pollution concerns into all policies and tools; making use of green-sustainable economy pathways that emphasize ecosystem and knowledge-based management and the key role of the sustainable use of biodiversity for innovation, and by reducing carbon and non-carbon greenhouse gas emissions while adapting to climate change in line with the UNFCCC and the Paris Agreement.

14. We commit to working across sectors and levels of government, and between governments, to halt the loss of biodiversity, enhancing measures to address the, degradation, and fragmentation of all ecosystems, focusing on areas of particular importance for biodiversity; sustainable land, sea and water use, effectively managing and designating protected areas and parks, safeguarding especially vulnerable habitats, types of nature and ecosystems,
stimulating the sustainable use of biodiversity, ensuring and increasing benefit-sharing from the utilization of genetic resources, and addressing the drivers of illegal deforestation, wildlife trafficking, illegal mining, illegal, unreported and unregulated fishing, and other unsustainable activities, crimes and conflicts that have serious impacts on the environment.

43.14. We commit to promoting conservation and sustainable use and management of nature and its resources, to advance sustainable consumption and production patterns, including, as appropriate, through resource efficiency and circular economy and bioeconomy policy approaches, and by applying appropriate valuation of promoting the fair payment for nature ecosystem services and applying, as appropriate, assessment methods of nature-related risks in policymaking, in line with national circumstances and priorities and consistent with international obligations.

44.15. We commit to promoting and strengthening ecosystem based approaches and nature-based solutions, including by actively reducing deforestation and forest degradation, and by protecting, actively conserving, sustainably managing, and restoring degraded land and ecosystems that provide us with food, water, and energy, are habitats for biodiversity and provide carbon storage and sequestration, climate change adaptation and disaster risk reduction, that provide us with a wide range of ecosystem services, and by supporting and stimulating the sustainable use of biodiversity, including by fostering bioeconomy activities and innovation, for example natural forests, wetlands, peatlands, mangroves and coral reefs, thus underpinning our efforts to achieve the Sustainable Development Goals, in line with national circumstances and priorities, highlighting that such ecosystem-based approaches do not replace the priority actions needed to urgently reduce greenhouse gas emissions in a way that is consistent with the objectives of the UNFCCC and the goals of the Paris Agreement.

45.16. We recognize the importance of the best available science for effective climate action and policymaking and stress the urgency of enhancing ambition and action in relation to mitigation, adaptation and finance in this critical decade.

46.17. We will promote comprehensive land and water use planning backed up by robust national enforcement as an important tool for sustainable development, taking into account the specific challenges faced by developing countries, and encourage international cooperation to help create a conducive business environment that stimulates investments in sustainable production and value chains and in biodiversity-based innovation and bioeconomy, consistent with relevant international obligations.

47.18. We are deeply concerned about the impact of land degradation and droughts, especially in the most vulnerable countries developing countries, and recognize that practices that restore land and soil and achieving land degradation neutrality has the potential to bring about positive socioeconomic change, protect ecosystems, and act as an accelerator for achieving several Sustainable Development Goals.

48.19. We commit to safeguarding life under water, and restoring a clean, healthy, resilient and productive ocean capable of providing food, sustainable livelihoods, and storing carbon, a wide range of ecosystem services to support sustainable livelihoods, through strengthening efforts to protect, conserve, and sustainably manage our oceans, seas and coastal ecosystems, while acting to prevent pollution, including nitrogen pollution, and increase resilience to climate change, and prevent marine temperature rise, sea level rise and ocean acidification, by keeping our efforts in line with the UNFCCC and the Paris Agreement and the Agenda 2030.

49.20. We maintain our dedication to act in line with the implementation plan towards a pollution-free planet to protect nature and human health from adverse impacts from chemicals and waste and support an ambitious framework for the sound management of chemicals and waste beyond 2020, building from the lessons learned from the SAICM, its Johannesburg Plan of Implementation, and the UNEP Global Chemicals Outlook II. We also commit to harnessing the potential of sustainable materials management, innovative business models, knowledge-
sharing and capacity-building on chemical management instruments, as well as to further addressing alternatives to legislation and capacity gaps in developing countries, including through scaling up new and innovative financing, for the sound management of chemicals and waste.

20-21. [Placeholder for text with reference to recent developments and outcomes on Marine Litter]

24-22. We commit to pursuing and joining new and innovative partnerships across sectors, and engage all relevant stakeholders, working with youth, women, Indigenous Peoples and local communities, business, finance and science sectors to develop actions that that are nature positive and stimulate the conservation and sustainable use of biodiversity, unlock investments in innovation, promote the sound management of chemicals and waste and reverse the persistently negative long term trend for the environment described by recent scientific reports from the Intergovernmental Science Policy Platform on Biodiversity and Ecosystem Services (IPBES), the Intergovernmental Panel on Climate Change (IPCC), the Technology and Economic Assessment Panel (TEAP), the International Resource Panel (IPR) and the United Nations Environment Programme (UNEP), taking into account where appropriate reports from other relevant platforms, such as the International Resource Panel (IPR).

22-23. We commit to cooperating across sectors and levels of governments, in partnership with other governments and local actors and the private sector to transition to more sustainable food systems, in line with the 2030 Agenda for Sustainable Development, and inspired by the outcomes of the UN Food Systems Summit vision of sustainable food systems that deliver with a view to delivering enhanced food security and resilience and fostering innovation while reducing emissions, biodiversity loss and freshwater use, as an essential important solution to accelerate actions on all the Sustainable Development Goals, and we welcome the strong engagement by UNEP in the Summit follow up processes, commit to support the relevant work from UN agencies in the Summit follow up processes, under the guidance of Member States.

23-24. We reaffirm the continued need to strengthen actions for people and nature and our commitment towards the UN Decade of Action for Sustainable Development and the UN Decade on Ecosystem Restoration, and call for an ambitious, balanced, practical, effective and robust and transformational post-2020 global biodiversity framework for adoption at the 15th Conference of Parties of the UN Convention on Biological Diversity that inter alia includes a set of clear and robust goals and targets to address the direct and indirect drivers of halt biodiversity loss, as a key instrument to reach the Sustainable Development Goals, and the 2050 vision of the Convention of Biological Diversity of living in harmony with nature, including the provision of the necessary means of implementation.

24-25. We call for the urgent, adequate and coherent implementation of the actions, commitments and resolutions adopted by the fifth United Nations Environment Assembly as well as previous UNEA outcomes addressing the triple planetary three environmental crises – climate change, biodiversity loss and pollution, and further recognize our role, as Ministers of the Environment, in following up on these commitments within our own governments, contributing to coordinated action across sectors and levels of government and promoting effective implementation.
We further recognize that the effective implementation of these actions requires enabling and coherent legal and policy frameworks at all levels, good governance and law enforcement, to be supported by effective and urgently mobilized means of implementation from all sources of finance, including domestic, international, private sector and innovative sources in line with the Addis Ababa Action Agenda, as well as from relevant international environmental agreements, by further capacity building, environmentally sound technologies, dedicated development partnerships, and a renewed and strong commitment to multilateralism and international solidarity.

OP26alt. We further recognize that the effective implementation of those actions requires enabling and coherent policy frameworks at all levels, good governance and law enforcement and we highlight the urgent need to provide adequate and sufficient means of implementation to developing countries and we call for the immediate implementation of provisions on resource mobilization and means of implementation within relevant multilateral environmental agreements, in order to address the financial, capacity, technical and technological constraints faced by developing countries, including by mobilizing new, additional, sufficient and predictable multilateral financial resources to fulfill the commitments of developed countries enshrined in the Rio Conventions, the Paris Agreement and the Post-2020 Global Biodiversity Framework, to be adopted at part two of the 15th Conference of the Parties to CBD, in line with the Principle of Common, But Differentiated Responsibilities.

OP26bis. We commit to develop innovative financial mechanisms, including payment for ecosystem services schemes, to stimulate the adequate valuation of ecosystem services and of conservation, restoration, management, and sustainable use activities that support the provision of those services, and engage the private sector, local communities and other relevant stakeholders in the conservation and sustainable use of natural resources, in line with the Addis Ababa Action Agenda.

OP26ter. We commit to ensure adequate capacity building and access to environmentally sound technologies, in particular for developing countries, and stimulate the effective participation of developing countries in scientific partnerships to foster innovation based on biodiversity, reaffirming the importance of dedicated North-South, South-South and triangular development partnerships, and a renewed and strong commitment to multilateralism and international solidarity.

25.

26. We further welcome and express our support for the upcoming international meeting Stockholm+50: a healthy planet for the prosperity of all – our responsibility, our opportunity, to be held in Stockholm, Sweden, on 2-3 June 2022, to further accelerate the transformation to a sustainable future, in line with the 2030 Agenda for Sustainable Development and regard this UNEA5 declaration as our input to Stockholm +50 [ref-UNGA resolution A/RES/75/280].
