

The Global Manual on Economy-Wide Material Flow Accounts (EW-MFA)

Session 4: Domestic Material Consumption as an indicator of economic pressure on the environment

Global Webinar on Geospatial and Other Data Sources for Environment Statistics: Assessing the Impact of the Economy on the Environment

Introduction (1/3)

Where to find it

"*UNEP (2021). The use of natural resources in the economy: A Global Manual on Economy-Wide Material Flow Accounting*"

Introduction (2/3)

Content

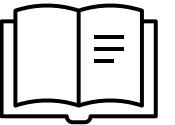

- Guidance for national statistical offices and other relevant organizations for the compilation of simple material flow data sets (direct material flow accounts)
- Builds on the experience of the Eurostat accounting guidelines and extends them to a global level

Introduction (2/3)

Content

- Guidance for national statistical offices for the compilation of simple material flow data sets (direct material flow accounts)
- Builds on the experience of the Eurostat accounting guidelines and extends them to a global level

Introduction (3/3)

Objectives

- Build capacity for EW-MFA at the national level
- Report progress towards SDG targets 8.4 and 12.2

Introduction (3/3)

Objectives

- Build capacity for EW-MFA at the national level
- Report progress towards SDG targets 8.4 and 12.2

8 DECENT WORK AND
ECONOMIC GROWTH

12 RESPONSIBLE
CONSUMPTION
AND PRODUCTION

Table of Contents

Acknowledgements	ix	Acronyms	xi
1 Introduction			2
1.1 Purpose and policy applications of economy-wide material flow accounts established at the national level	2	1.3.1 The SEEA Central Framework and EW-MFA	6
1.2 Structure and coverage of the global EW-MFA manual	3	1.3.2 First national MFA's and international harmonisation of accounting standards	8
1.3 Main accounting principles and relationship to other accounting systems	6	1.3.3 Fundamentals	8
		1.4 Common data sources for national EW-MFA	15
2 Domestic Extraction			19
2.1 Biomass	19	2.3.2 Decision tree, data sources and availability	56
2.1.1 Introduction	19	2.3.3 Accounting methods and practical guidelines for data compilation	58
2.1.2 Data sources and availability	21	2.3.4 Specific issue: crushed rock	70
2.1.3 Accounting methods and practical guidelines for data compilation	23	2.4 Fossil fuels	70
2.2 Metal ores	33	2.4.1 Introduction	70
2.2.1 Concepts and classification	33	2.4.2 Data sources and availability	72
2.2.2 Data sources and availability	42	2.4.3 Fossil fuels classification in EW-MFA versus UNSD SIEC	76
2.2.3 Accounting methods and practical guidelines for data compilation	44	2.4.4 Accounting methods and practical guidelines for data compilation	77
2.2.4 Specific issues of developing countries	53		
2.3 Non-metallic minerals	54		
2.3.1 Concepts and classification	54		
3 Trade of Materials			82
3.1 Concepts and classification	82	3.3 Accounting methods and practical guidelines for data compilation	88
3.1.1 Concepts	82	3.3.1 Traded biomass	89
3.1.2 Classification – detail	83	3.3.2 Traded metal ores	90
3.2 Data sources	87	3.3.3 Traded non-metallic minerals	92
		3.3.4 Traded fossil fuels	92

4 Material outflows			95
4.1 Concepts and classification	95	4.3.3 Data compilation	105
4.1.1 Bottom-up accounts and full balancing	97	4.4 Emissions to water	106
4.2 Emissions to air	97	4.4.1 Introduction	106
4.2.1 Concepts and classifications	97	4.4.2 Conventions and system boundaries	107
4.2.2 Typical data sources and assessment of data availability	98	4.4.3 Data compilation	107
4.2.3 Existing reporting	99	4.5 Dissipative use of products	108
4.2.4 Accounting methods and practical guidelines for data compilation	101	4.5.1 Introduction	108
4.2.5 Specific issues of developing countries	104	4.5.2 Conventions and system boundaries	109
4.3 Waste landfilled	104	4.5.3 Data compilation	109
4.3.1 Introduction	104	4.6 Dissipative losses	112
4.3.2 Conventions and system boundaries	105	4.6.1 Introduction	112
		4.6.2 Data compilation	112
5 Material balance			115
6 Headline indicators			117
6.1 Background	117	6.3 Indicators including indirect and unused material flows	121
6.2 Indicators on direct material flows	118	6.4 Strengths and limitations of indicators with different scope	122
6.2.1 Technical description	118		
6.2.2 Policy questions	119		
7 Material footprint of consumption			125
7.1 Introduction	125	7.2.2 Bottom-up approach: material intensity coefficients	127
7.2 Summary of available methods	126	7.2.3 Hybrid approaches: complementing input-output analysis with coefficients	127
7.2.1 Top-down approach: input-output analysis	126	7.3 Outlook	128
8 Accounting for stocks			130
8.1 Introduction	130	8.2.2 Stock accounting	131
8.2 Methods to quantify stocks	130	8.2.3 Dynamic stock modelling	132
8.2.1 Overview	130		
9 References	134	Annex 1	143

Time for a live
