Written Consultation Submission: GAPROFFA (Action Group for Promotion and Protection of Fauna and Flora)

UNEP's Call for Written Inputs on Issues of Concern: Priorities for further work and potential further international action

Introduction

UNEP is undertaking a consultation on priorities for further work and potential further international on action on 19 Issues of concern. This call for written inputs is being conducted to gather relevant information from stakeholders and views about the next steps that should be taken on issues of concern.

The call for inputs will address 19 issues of concern and you may wish to only provide answers for issues of concern that are of relevance to your organization/ country. At the start of each section, you will be asked whether you would like to provide responses on each specific issue. If you choose "No" on the introduction page of each issue you may proceed to the next issue of concern.

Please be aware that the submitted responses will be made available on the UNEP website indicating the stakeholder affiliation/ government. The names and contact details of the respondents will not be published on the UNEP website. Further information on UNEPs consultation process can be found here.

We highly recommend coordinating responses within your stakeholder affiliation/ government. Please complete this form for collecting written inputs by **15/08/2023** COB Central European time (CET).

For those using this MS word version, kindly return the completed word version of the call for written inputs to. Please remember to save your work often, due to the addition of ActiveX controls below (such as option buttons and checkboxes), the autosave feature is not available on this form.

Please enter your email details.

Background

In 2020, UNEP developed an Assessment Report on Issues of Concern, to inform the international community about the current situation of specific chemicals and waste issues. It was based on a review of published evidence. It was intended to support discussion at the fifth session of the UN Environment Assembly (UNEA 5) and other international forums working towards sound management of chemicals and waste. The Assessment Report assessed the ability of existing actions to address current environmental and human exposure to individual chemicals and groups of chemicals. It looked at 11 issues with emerging evidence of risks identified by the Global Chemicals Outlook-II and the 6 Emerging Policy Issues (EPIs) and two other Issues of Concern identified under the Strategic Approach to International Chemicals Management (SAICM). The report concluded that concerted international action by all stakeholders at all levels is urgently required.

GCO-II issues	SAICM Issues
1) <u>Arsenic</u>	1) <u>Chemicals in products</u> (CiP)
2) <u>Bisphenol A</u> (BPA)	2) <u>Endocrine-disrupting chemicals</u> (EDCs)
3) <u>Cadmium</u>	3) Environmentally Persistent Pharmaceutical Pollutants
4) <u>Glyphosate</u>	(EPPPs)
5) <u>Lead</u>	4) Hazardous substances within the life cycle of electrical
6) <u>Microplastics</u>	and electronic products (HSLEEP)
7) <u>Neonicotinoids</u>	5) <u>Highly hazardous pesticides</u> (HHPs)
8) <u>Organotins</u>	6) <u>Lead in paint</u>
9) <u>Phthalates</u>	7) Nanotechnology and manufactured nanomaterials
10) Polycyclic Aromatic Hydrocarbons (PAHs)	8) Per- and polyfluoroalkyl substances (PFASs) and the
11) <u>Triclosan</u>	transition to safer alternatives

In March 2022, at UNEA 5.2, UNEP was requested through <u>resolution 5/7</u> to seek views from Member States and other stakeholders on priorities for further work, building on existing measures and initiatives, and on potential further international action on the issues discussed in the Assessment Report on Issues of Concern. The resolution also requests the preparation of a summary analysis, taking into account the views received.

Through this call for inputs, UNEP intends to respond to UNEA's request by gathering information from stakeholders about the priorities for future work and potential further international action. The findings from this call for written inputs will inform the writing of the Summary Analysis. The Summary Analysis is expected to build upon the <u>SAICM Survey</u> which considered the 8 EPIs and other issues of concern.

Available resources to support your responses:

All 19 issues of concern will be covered in this call for written inputs. A recording from an information webinar held on 27 April 2023, on the Assessment Report on Issues of Concern is <u>available here</u> for your reference. Further background information can be found below:

- Assessment report <u>here>></u>
- Annexes <u>here>></u>
- Factsheets on Issues of concern <u>here>></u>
- Catalogue of International Actions on Chemicals and Waste here>
- Survey from SAICM Sec on EPIs <u>here>></u>

The form for submitting written inputs will remain open until **15/08/2023** COB Central European time (CET).

Thank you for your kind support with this consultation.

Personal Information:

<u>Institution/Organization:</u> GAPROFFA (Action Group for Promotion and Protection of Fauna and Flora)

Type of Institution:

○ Government	
O Intergovernmental Organi	izatioi
© Civil Society Organization	
Business/Private Sector	
Academia	
Other	

<u>If relevant, please describe the membership coverage, geographical coverage and area of interest</u> of your institution:

GAPROFFA has 10 members and covers all districts in Benin. GAPROFFA works in Agriculture, environment, health Bioversity and Industry. We works on the chemicals products and waste in collaboration with all focal persons of conventions of the environmental ministry as such Stockholm, Bale, Rotterdam, Minamata and Bamako conventions; We are the SAICM NGO focal point in Benin.

Country: Benin

Questions

1. Arsenic

Screening Question - Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on <u>Arsenic</u> for more information on the topic.

	1. Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, e.g. Bisphenol A (BPA))</i>
	○ Yes
	No, I do not know enough about this issue
	No, this issue is not relevant to my country or institution
	○ No, other
	a. If you selected "No, other" in the previous question, please elaborate here:
Тес	hnical Questions - Arsenic
var pre ma	enic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in ious inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood servatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy nufacturing, electronics, and semiconductor manufacturing.
Ple	ase visit the two-page factsheet on <u>Arsenic</u> for more information on the topic.
Ple	ase answer the questions below that are relevant to your organization/ country/ region:
1.	Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
	○ Yes
	○ No
	Do not know

	a. Flease provide a brief explanation for your response
2.	What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).
	 □ Legally binding □ Soft law □ Information sharing and awareness/ Voluntary initiatives □ No international actions are needed □ Other:
	a. Please explain your response, including examples if possible*
3.	Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
	 □ Regulatory control measures □ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers) □ Options / guidance for economic instruments □ Voluntary measures and approaches: (such as Guidelines, principles and strategies) □ Measures supporting science-based knowledge and research □ Other:
	a. Please explain your response, including examples if possible:
4.	What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?
	 □ Lack of technical capacity □ Lack of scientific knowledge □ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors □ Difficulty with resource mobilisation
	☐ Lack of economically feasible areen and sustainable alternatives

	effects, or prevalence of chemicals in international trade)? None, there are no factors preventing action or progress Other:
	a. Please explain your response, including examples if possible:
5.	Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6.	Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on <u>Arsenic</u> for more information on the topic. If you select "Other", please elaborate your response).
	□ Agriculture and food production □ Construction □ Electronics □ Energy □ Health □ Labour □ Pharmaceuticals □ Public, private, blended finance □ Retail □ Textiles □ Transportation □ Waste □ Other:
7.	Which international forum or instrument would be best placed to take the lead on internationa action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments).
	 a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): Agriculture and Food Biodiversity Climate Change Health

	☐ Human Rights
	☐ Sustainable Consumption and Production
	☐ World of Work
	□ Other:
	b. Please explain your response, including examples if possible. (<i>Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste</i>):
8.	What priority level do you attach to this issue for international action?
	O Very high
	○ High
	○ Medium
	○ Low
	Very low
9.	Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
10.	Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

2. Bisphenol A (BPA)

Screening Question - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on <u>Bisphenol-A</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Cadmium</i>)				
	O Yes				
	• No, I do not know enough about this issue				
	O No, this issue is not relevant to my country or institution				
	○ No, other				

a. If you selected "No, other" in the previous question, please elaborate here:

3. Cadmium

Screening Question - Cadmium

Cadmium is a toxic metal that is naturally found in the Earth's crust, generally at low levels.

Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure.

Please visit the two-page factsheet on <u>Cadmium</u> for more information on the topic.

4. Glyphosate

Screening Question - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic.

Entry question : Would you like to provide responses on this issue of concern? (<i>Please select</i>
only 1 option below. If you select a "No" option, you may move to the next issue of concern,
Lead)

• Yes
○ No, I do not know enough about this issue
O No, this issue is not relevant to my country or institution
○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

In Benin, the glyphosate is much used in agriculture. It is used in agro-food product. It uses in urban settings can also be a significant source of contamination. Several diagnostics in hospitals and laboratories have shown traces of this dangerous product in the blood. According to an environmental specialist, glyphosate is likely to wreak havoc in Benin. It is why it is very important.

Technical Questions - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic.

Ple	ase answer the questions below that are relevant to your organization/ country/ region:
1.	Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
	Yes
	○ No
	O Do not know
	a. Please provide a brief explanation for your response*
2.	What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options). ✓ Legally binding ☐ Soft law ✓ Information sharing and awareness/ Voluntary initiatives ☐ No international actions are needed ☐ Other:
	a. Please explain your response, including examples if possible*.
	s herbicide is used extensively in cotton growing, on which the country's economy depends. His ciatives brought him threats and intimidation.
3.	Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).

√ Regulatory control measures

	 ✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers) ✓ Options / guidance for economic instruments ✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies) ✓ Measures supporting science-based knowledge and research ✓ Other: Country engagement through government and decision makers engagement
	a. Please explain your response, including examples if possible:
	According the catalogue of international actions all approaches or measure are relevant appropriate to address this issue at the international level. Benin is a small country where the transport of the food products containing the Glyphosate from Nigeria to Benin is very easy.
4.	What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?
	 ✓ Lack of technical capacity ✓ Lack of scientific knowledge ✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors ✓ Difficulty with resource mobilisation ✓ Lack of economically feasible green and sustainable alternatives ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)? ✓ None, there are no factors preventing action or progress ✓ Other: _Corruption
	a. Please explain your response, including examples if possible: Many preventive actions are important, but the focus must be on corruption. How can we banish this scourge so that we discourage traders from bringing this dangerous product into our country? For example, a man worried about his safety confided in Géopolis this Monday September 3, 2022. He says he has been threatened and subjected to intimidation of all kinds since he launched a "Benin without pesticides" campaign in 2017. A campaign that received thousands of signatures online.
5.	Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

The existing initiative that could be replicated or scaled up is the preventive campaigns ,

research studies, capacity building through awareness raising, and advocacy.

		Other:
	The Str	rategic Approach to International Chemicals Management (SAICM) is the only stional agreement that addresses the full range of health and environmental issues or discovered, linked to the production and use of chemicals.
	a.	Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
		√ Agriculture and Food
		☐ Biodiversity
		☐ Climate Change
		√ Health
		☐ Human Rights
		☐ Sustainable Consumption and Production
		√ World of Work
		□ <i>Other</i> :

Link with the poisons centers • environment and health monitoring and surveillance systems laboratory capacity burden of disease estimates • occupational exposure, in formal and informal settings • health impacts of pesticides and fertilizers • • management of contaminated sites • consumer exposure to chemicals in products

8.	What priority level do you attach to this issue for international action?
	Very high
	○ High
	○ Medium
	○ Low

O Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

We would like to start with a reference study to determine all the constraints and difficulties surrounding the distribution of these lead-containing materials. Then we will identify the training need for the stakeholders.

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

The same things but we will select 4 countries in the West Africa. Then We would like to start with a reference study to determine all the constraints and difficulties surrounding the distribution of these lead-containing materials. Then we will identify the training need for the stakeholders.

6. Microplastics

Screening Question - Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on Microplastics for more information on the topic.

1.	Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Neonicotinoids)		
		O Yes	
		No, I do not know enough about this issue	
		O No, this issue is not relevant to my country or institution	
		O No, other	
	a.	If you selected "No, other" in the previous question, please elaborate here:	

Technical Questions - Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

7. Neonicotinoids

Screening Question - Neonicotinoids

Neonicotinoids are a class of neuroactive insecticides chemically related to nicotine. Since the first neonicotinoid (imidacloprid) was commercialized in the 1990s, seven main compounds (acetamiprid, clothianidin, dinotefuran, imidacloprid, nitenpyram, thiamethoxam and thiacloprid) are now available on the global market. Today, neonicotinoids are used in protecting plants, livestock and pets from pest insects, as well as for malaria vector control, i.e., mosquitos, to protect humans, in more than 100 countries. Neonicotinoids are also used as biocides.

Please visit the two-page factsheet on Neonicotinoids for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Organotins</i>)	
		○ Yes
		No, I do not know enough about this issue
		O No, this issue is not relevant to my country or institution
		○ No, other
	a.	If you selected "No, other" in the previous question, please elaborate here:

8. Organotins

Screening Question - Organotins

Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please visit the two-page factsheet on Organotins for more information on the topic.

1.	•	question: Would you like to provide responses on this issue of concern? (Please select option below. If you select a "No" option, you may move to the next issue of concern, ates)

9. Phthalates

Screening Question - Phthalates

Phthalates are a large family of semi-volatile organic compounds. They are a group of plasticizers with softening and elastic effects, and they are produced in high volumes to be used in products such as vinyl flooring, adhesives, detergents, lubricating oils, automotive plastics, plastic clothing and personal care products. Phthalates accounted for 65 per cent of global consumption of plasticizers in 2017.

Please visit the two-page factsheet on **Phthalates** for more information on the topic.

10. Polycyclic Aromatic Hydrocarbons (PAHs)

Screening Question - Polycyclic Aromatic Hydrocarbons (PAHs)

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on <u>Polycyclic Aromatic Hydrocarbons</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Triclosan</i>)
	○ Yes
	No, I do not know enough about this issue
	No, this issue is not relevant to my country or institution
	○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

11. Triclosan

Screening Question - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on <u>Triclosan</u> for more information on the topic.

1.	only 1	question: Would you like to provide responses on this issue of concern? (Please select option below. If you select a "No" option, you may move to the next issue of concern, cals in Products (CiP))
		O Yes
		O No, I do not know enough about this issue
		No, this issue is not relevant to my country or institution
		○ No, other
	a.	If you selected "No, other" in the previous question, please elaborate here:

Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

	Please answer the q	juestions below that	at are relevant to v	your organization/	country/	region:
--	---------------------	----------------------	----------------------	--------------------	----------	---------

FIE	ease answer the questions below that are relevant to your organization, country, region.
1.	Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
	O Yes
	○ No
	O Do not know
	a. Please provide a brief explanation for your response*
2.	What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).
	 □ Legally binding □ Soft law □ Information sharing and awareness/ Voluntary initiatives □ No international actions are needed □ Other:
	a. Please explain your response, including examples if possible*
3.	Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

	 □ Regulatory control measures □ Information based and enforcement tools (such as Scientific and technical and guidelines Guidelines and tools for enforcement, Awareness tools (including of consumers) □ Options / guidance for economic instruments □ Voluntary measures and approaches: (such as Guidelines, principles and strategies) □ Measures supporting science-based knowledge and research □ Other:
	a. Please explain your response, including examples if possible:
4.	What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)? Lack of technical capacity Lack of scientific knowledge Difficulties in sharing knowledge and coordinating action among different stakeholders
	and across sectors Difficulty with resource mobilisation Lack of economically feasible green and sustainable alternatives Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)? None, there are no factors preventing action or progress Other:
5.	a. Please explain your response, including examples if possible: Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6.	Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on <u>Triclosan</u> for more information on the topic. If you select "Other", please elaborate your response).
	 □ Agriculture and food production □ Construction □ Electronics □ Energy □ Health □ Labour

		Pharmaceuticals
		Public, private, blended finance
		Retail
		Textiles
		Transportation
		Waste
		Other:
7.	action intergo	international forum or instrument would be best placed to take the lead on international on this issue? (Open space to elaborate. Please provide specific examples of e.g., overnmental bodies, multilateral agreements within or outside the chemicals and waste, international instruments).
	a.	Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
		☐ Agriculture and Food
		☐ Biodiversity
		☐ Climate Change
		☐ Health
		☐ Human Rights
		☐ Sustainable Consumption and Production
		☐ World of Work
		□ <i>Other</i> :
	b.	Please explain your response, including examples if possible. (Open space question. For
		more information, please see the <u>UNEP assessment paper on linkages with other clusters</u>
		related to chemicals and waste):
8.	What p	priority level do you attach to this issue for international action?
		○ Very high
		O High
		© Medium
		O Low
		© Very low

9.	Is there any priority further work you would like to suggest at the national level*? (Open space
	to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

12. Chemicals in products (CiP)

Screening Question - Chemicals in products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, "with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle". SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on Chemicals in Products for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (Please select
	only 1 option below. If you select a "No" option, you may move to the next issue of concern,
	Endocrine-disrupting chemicals (EDCs))

○ No, I do not know enough about this issue
O No, this issue is not relevant to my country or institution
○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

Technical Questions - Chemicals in products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, "with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle". SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on **Chemicals in Products** for more information on the topic.

1.	•	agree with the assessment report that further international action is necessary*? (If you 'No", you are welcome to answer the questions below or you may proceed directly to on 9)
		Yes
		○ No
		O Do not know
	a.	Please provide a brief explanation for your response*.
ex	osure c	n product (CIP) has a negative effect on the health of human and the environment. The of CIP through the children and pregnancy women. That is why that further international ery necessary.
2.		ypes of international actions should be taken? (Multiple answers based on the catalogue
	inform	on, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more ation on available options).
	inform	
	inform	ation on available options). ✓ Legally binding □ Soft law
	inform	ation on available options). ✓ Legally binding □ Soft law ✓ Information sharing and awareness/ Voluntary initiatives
	inform	ation on available options). ✓ Legally binding □ Soft law ✓ Information sharing and awareness/ Voluntary initiatives □ No international actions are needed
	inform	ation on available options). ✓ Legally binding □ Soft law ✓ Information sharing and awareness/ Voluntary initiatives
	inform	ation on available options). ✓ Legally binding □ Soft law ✓ Information sharing and awareness/ Voluntary initiatives □ No international actions are needed

But in addition, the decision makers (government, local and regional authorities) engagement should be effective.

3.	Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to		
	the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).		
	 ✓ Regulatory control measures ✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers) □ Options / guidance for economic instruments ✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies) ✓ Measures supporting science-based knowledge and research □ Other: a. Please explain your response, including examples if possible:		
4.	What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?		
	√ Lack of technical capacity		
	✓ Lack of scientific knowledge		
	\checkmark Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors		
	✓ Difficulty with resource mobilisation		
	√ Lack of economically feasible green and sustainable alternatives		
	\checkmark Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?		
	☐ None, there are no factors preventing action or progress		
	□ <i>Other:</i>		
	a. Please explain your response, including examples if possible:		
	The listed factors prevent action or progress on addressing the issue in your country are very important because there is no strict control of our porous borders. And then there's corruption, because the economic stakes of these distributors are enormous.		
5.	Can you point to existing initiatives that could be replicated or scaled up at the international		

level? (Open space answer. Please share a weblink to the initiative(s) if available).

6.	Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on <u>Chemicals in Products</u> for more information on the topic. If you select "Other", please elaborate your response).
	topic. If you select "Other", please elaborate your response). ✓ Agriculture and food production ✓ Construction ✓ Electronics ✓ Energy ✓ Health ✓ Labour ✓ Pharmaceuticals ✓ Public, private, blended finance ✓ Retail ✓ Textiles ✓ Transportation ✓ Waste □ Other:
7.	Which international forum or instrument would be best placed to take the lead on internation action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments).
agı	Strategic Approach to International Chemicals Management (SAICM) is the only international eement that addresses the full range of health and environmental issues or newly discovered, ed to the production and use of chemicals.
ch	micals.
All	nstruments
	a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
	 □ Agriculture and Food □ Biodiversity □ Climate Change □ Health □ Human Rights □ Sustainable Consumption and Production □ World of Work □ Other:

b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste*):</u>

Link with clusters: poisons centers • environment and health monitoring and surveillance systems • safety guidelines and norms regarding water, air, soil, food etc. • laboratory capacity • residential exposure to industrial chemicals and consumer products • use of chemicals in healthcare and health care waste management • occupational exposure, in formal and informal settings • health impacts of pesticides and fertilizers • management of contaminated sites • consumer exposure to chemicals in products

8.	What priority level do you attach to this issue for international action?
	Very high
	○ High
	○ Medium
	○ Low
	O Very low
9.	Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate, Please share a weblink to the suggestion(s) if available).

Not yet

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Not yet

13. Endocrine-disrupting chemicals (EDCs)

Screening Question - Endocrine-disrupting chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided "to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders" and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on <u>Endocrine Disrupting Chemicals</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select</i>
	only 1 option below. If you select a "No" option, you may move to the next issue of concern,
	Environmentally Persistent Pharmaceutical Pollutants (EPPPs))

Yes
No, I do not know enough about this issue
○ No, this issue is not relevant to my country or institution
○ No, other

b. If you selected "No, other" in the previous question, please elaborate here:

Technical Questions - Endocrine-disrupting chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided "to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders" and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

14. Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Screening Question - Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution "considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority", "recognizes the current knowledge gaps on exposure to and the effects of EPPP", "decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders", and "requests all interested stakeholders and organizations to provide support, including expertise, financial and inkind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance"

Please visit the two-page factsheet on <u>Environmentally Persistent Pharmaceutical Pollutants</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Hazardous substances within the life cycle of electrical and electronic products (HSLEEP))</i>
	○ Yes
	○ No, I do not know enough about this issue
	No, this issue is not relevant to my country or institution
	○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

8. What priority level do you attach to this issue for international action?

	O Very high
	○ High
	○ Medium
	○ Low
	O Very low
9.	Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
10.	Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

15. Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Screening Question - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels, significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on <u>Hazardous Substances within the Life cycle of Electrical and Electronic Products</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Highly Hazardous Pesticides (HHPs</i>))		
	O Yes

16. Highly hazardous pesticides (HHPs)

Screening Question - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous".

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported "concerted action to address HHPs in the context of SAICM" and encouraged "relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises", and welcomed "the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC"

Please visit the two-page factsheet on <u>Highly Hazardous Pesticides</u> for more information on the topic.

1.	. Entry question: Would you like to provide responses on this issue of concern? (Please selection)				
	only 1 option below. If you select a "No" option, you may move to the next issue of concern,				
	Lead in Paint)				

Yes
○ No, I do not know enough about this issue
○ No, this issue is not relevant to my country or institution
○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

HHP are the pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment.

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous".

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported "concerted action to address HHPs in the context of SAICM" and encouraged "relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises", and welcomed "the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC"

Please visit the two-page factsheet on <u>Highly Hazardous Pesticides</u> for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1.	Do you agree with the assessment report that further international action is necessary*? (If y select "No", you are welcome to answer the questions below or you may proceed directly to question 9)		
		Yes	
		○ No	
		O Do not know	
	a.	Please provide a brief explanation for your response*	
		e pesticides that are acknowledged to present particularly high levels of acute or chronic	

hazards to health or environment. This dangerous chemical is used in all sectors/value chains in Benin as such agriculture, industry, environment, ect...

In addition, these pesticides appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).

√ Legally binding

 ☐ Soft law ✓ Information sharing and awareness/ Voluntary initiatives ☐ No international actions are needed ☐ Other:

17. Lead in paint

Screening Question - Lead in paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through "lead paint", or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, "Lead in Paint" was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt "legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure" and to have all paint manufacturers eliminate "the use of added lead compounds in priority areas" by 2020.

Please visit the two-page factsheet on <u>Lead in Paint</u> for more information on the topic.

1.	Entry question: Would you like to provide responses on this issue of concern? (Please select
	only 1 option below. If you select a "No" option, you may move to the next issue of concern,
	Nanotechnology and manufactured nanomaterials)

Yes
No, I do not know enough about this issue
○ No, this issue is not relevant to my country or institution
○ No, other

18. Nanotechnology and manufactured nanomaterials

No, other

Screening Question - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns "Nanotechnology and manufactured nanomaterials" was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

Please visit the two-page factsheet on <u>Nanotechnology and manufactured nanomaterials</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Per- and polyfluoroalkyl substances (PFASs</i>))

Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste fuster, international instruments). The Strategic Approach to International Chemicals Management (SAICM) is the only international agreement that addresses the full range of health and environmental issues or ewly discovered, linked to the production and use of chemicals.
a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u>
(Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
(Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food □ Biodiversity
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food □ Biodiversity ✓ Climate Change
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food □ Biodiversity ✓ Climate Change ✓ Health
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food □ Biodiversity ✓ Climate Change ✓ Health ✓ Human Rights
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food ☐ Biodiversity ✓ Climate Change ✓ Health ✓ Human Rights ✓ Sustainable Consumption and Production
(Multiple answers based on list below. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste</u>): ✓ Agriculture and Food □ Biodiversity ✓ Climate Change ✓ Health ✓ Human Rights ✓ Sustainable Consumption and Production ✓ World of Work
 (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste): ✓ Agriculture and Food ☐ Biodiversity ✓ Climate Change ✓ Health ✓ Human Rights ✓ Sustainable Consumption and Production
(Multiple answers based on list below. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste</u>): ✓ Agriculture and Food □ Biodiversity ✓ Climate Change ✓ Health ✓ Human Rights ✓ Sustainable Consumption and Production ✓ World of Work

7.

	O Very high
	● High
	○ Medium
	○ Low
	○ Very low
	Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
Not	t yet
10.	Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
-	Extend the baseline study on HHP in country
-	Capacity building of stakeholders at decision makers, researchers, technicians and end users

8. What priority level do you attach to this issue for international action?

Science-based knowledge and research

19. Per- and polyfluoroalkyl substances (PFASs)

Screening Question - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF2–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some "long-chain" PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified "managing PFASs and the transition to safer alternatives" as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders "to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible"

Please visit the two-page factsheet on <u>Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives</u> for more information on the topic.

1.	Entry question : Would you like to provide responses on this issue of concern? (<i>Please select</i>
	only 1 option below. If you select a "No" option, you may move to the Conclusion page)
	Yes

O No, I do not know enough about this issue

O No, other

O No, this issue is not relevant to my country or institution

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. -CF2-) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some "long-chain" PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified "managing PFASs and the transition to safer alternatives" as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders "to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible"

Ple	ease answer the questions below that are relevant to your organization/ country/ region:
1.	Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
	Yes
	○ No
	O Do not know
	a. Please provide a brief explanation for your response*
2.	What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
	√ Legally binding
	□ Soft law
	 ✓ Information sharing and awareness/ Voluntary initiatives □ No international actions are needed
	☐ Other:
	a. Please explain your response, including examples if possible*

	the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).
	 ✓ Regulatory control measures ✓ Information based and enforcement tools (such as Scientific and technical and guidelines Guidelines and tools for enforcement, Awareness tools (including of consumers) ✓ Options / guidance for economic instruments □ Voluntary measures and approaches: (such as Guidelines, principles and strategies) ✓ Measures supporting science-based knowledge and research □ Other: a. Please explain your response, including examples if possible:
4.	What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?
	 ✓ Lack of technical capacity ✓ Lack of scientific knowledge ✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors ✓ Difficulty with resource mobilisation ✓ Lack of economically feasible green and sustainable alternatives ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)? □ None, there are no factors preventing action or progress □ Other: Low partnership
5.	 a. Please explain your response, including examples if possible: Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
	Not yet
6.	Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on <u>Per- and polyfluoroalkyl substances (PFASs)</u> for more information on the topic. If you select "Other", please elaborate your response).

	\checkmark	Agriculture and food production
		Construction
	\checkmark	Electronics
		Energy
	\checkmark	Health
		Labour
		Pharmaceuticals
	\checkmark	Public, private, blended finance
		Retail
		Textiles
	\checkmark	Transportation
	✓	Waste
		Other:
7.	action intergo	international forum or instrument would be best placed to take the lead on international on this issue? (Open space to elaborate. Please provide specific examples of e.g., evernmental bodies, multilateral agreements within or outside the chemicals and waste international instruments).
agı	reement	gic Approach to International Chemicals Management (SAICM) is the only international that addresses the full range of health and environmental issues or newly discovered, ne production and use of chemicals.
	a.	Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
		✓ Agriculture and Food
		✓ Aigneditate una roou ✓ Biodiversity
		☐ Climate Change
		✓ Health
		☐ Human Rights
		✓ Sustainable Consumption and Production
		☐ World of Work
		□ Other:
	b.	Please explain your response, including examples if possible. (<i>Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chamicals and waste):</i>
		related to chemicals and waste):
		Link with clusters: poisons centers • environment and health monitoring and surveillance systems • laboratory capacity • residential exposure to industrial chemicals and consumer products • use of chemicals in healthcare and health care waste management • occupational exposure, in formal and informal settings • health impacts

7.

8.	What priority level do you attach to this issue for international action?
	O Very high
	High
	○ Medium
	○ Low
	O Very low
9.	Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
Cap	acity building of the stakeholders in public and private sector and civil society
10.	Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Conclusion:

Thank you for having reached this point in the form. You are now on the last page. Below are a final set of questions covering all 19 issues of concern.

GCO-II issues:

<u>Arsenic</u> | <u>Cadmium</u> | <u>Glyphosate</u> | <u>Lead</u> | <u>Microplastics</u> | <u>Neonicotinoids</u> | <u>Organotins</u> | <u>Phthalates</u> | Polycyclic Aromatic Hydrocarbons (PAHs) | Triclosan | Bisphenol A (BPA)

List of SAICM issues:

Chemicals in products (CiP) | Endocrine-disrupting chemicals (EDCs) | Environmentally Persistent

Pharmaceutical Pollutants (EPPPs) | Hazardous substances within the life cycle of electrical and

electronic products (HSLEEP) | Highly hazardous pesticides (HHPs) | Lead in paint | Nanotechnology

and manufactured nanomaterials | Per- and polyfluoroalkyl substances (PFASs) and the transition to

safer alternatives

Please submit your completed form via email by **15/08/2023** COB Central European time (CET).

a. Please explain your response. (Open space to elaborate).

1.	From the list of 19 issues, which issue(s) do you think is/are the most urgent? (Multiple options from the list of 19 issues)
	☐ Arsenic
	☐ Bisphenol A (BPA)
	□ Cadmium
	☐ Glyphosate
	√ Lead
	☐ Microplastics
	☐ Neonicotinoids
	□ Organotins
	☐ Phthalates
	☐ Polycyclic Aromatic Hydrocarbons (PAHs)
	☐ Triclosan
	✓ Chemicals in products (CiP)
	✓ Endocrine-disrupting chemicals (EDCs)
	☐ Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
	\square Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
	√ Highly hazardous pesticides (HHPs)
	\checkmark Lead in paint
	√ Nanotechnology and manufactured nanomaterials
	\checkmark Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

2. From the list of 19 issues, which issue(s) is/are the most actionable? (Multiple options from the list of 19 issues)		
□ Arsenic □ Bisphenol A (BPA) □ Cadmium □ Glyphosate ✓ Lead □ Microplastics □ Neonicotinoids □ Organotins □ Phthalates □ Polycyclic Aromatic Hydrocarbons (PAHs) □ Triclosan ✓ Chemicals in products (CiP) ✓ Endocrine-disrupting chemicals (EDCs) □ Environmentally Persistent Pharmaceutical Pollutants (EPPPs) □ Hazardous substances within the life cycle of electrical and electronic products (HSLEEP) ✓ Highly hazardous pesticides (HHPs) ✓ Lead in paint ✓ Nanotechnology and manufactured nanomaterials ✓ Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives b. Please explain your response. (Open space to elaborate).		
3. Are there any other observations you wish to note? (Open space to elaborate).		
We would like to make the survey on the mercury (gold mines and dentistry)		
Well done!!!
