## IPEN submission on

# UNEP's Call for Written Inputs on Issues of Concern: Priorities for further work and potential further international action

## Introduction

UNEP is undertaking a consultation on priorities for further work and potential further international on action on 19 Issues of concern. This call for written inputs is being conducted to gather relevant information from stakeholders and views about the next steps that should be taken on issues of concern.

The call for inputs will address 19 issues of concern and you may wish to only provide answers for issues of concern that are of relevance to your organization/ country. At the start of each section, you will be asked whether you would like to provide responses on each specific issue. If you choose "No" on the introduction page of each issue you may proceed to the next issue of concern.

Please be aware that the submitted responses will be made available on the UNEP website indicating the stakeholder affiliation/ government. The names and contact details of the respondents will not be published on the UNEP website. Further information on UNEPs consultation process can be <u>found here</u>.

We highly recommend coordinating responses within your stakeholder affiliation/ government. Please complete this form for collecting written inputs by **15/08/2023** COB Central European time (CET).

For those using this MS word version, kindly return the completed word version of the call for written inputs. Please remember to save your work often, due to the addition of ActiveX controls below (such as option buttons and checkboxes), the autosave feature is not available on this form.

Please enter your email details.

Email:

#### Background

In 2020, UNEP developed an <u>Assessment Report on Issues of Concern</u>, to inform the international community about the current situation of specific chemicals and waste issues. It was based on a review of published evidence. It was intended to support discussion at the fifth session of the UN Environment Assembly (UNEA 5) and other international forums working towards sound management of chemicals and waste. The Assessment Report assessed the ability of existing actions to address current environmental and human exposure to individual chemicals and groups of chemicals. It looked at 11 issues with emerging evidence of risks identified by the Global Chemicals Outlook-II and the 6 Emerging Policy Issues (EPIs) and two other Issues of Concern identified under the Strategic Approach to International Chemicals Management (SAICM). The report concluded that concerted international action by all stakeholders at all levels is urgently required.

GCO-II issues		SAICM Issues	
1)	Arsenic	1)	<u>Chemicals in products</u> (CiP)
2)	<u>Bisphenol A</u> (BPA)	2)	Endocrine-disrupting chemicals (EDCs)
3)	<u>Cadmium</u>	3)	Environmentally Persistent Pharmaceutical Pollutants
4)	<u>Glyphosate</u>		(EPPPs)
5)	<u>Lead</u>	4)	Hazardous substances within the life cycle of electrical
6)	<u>Microplastics</u>		and electronic products (HSLEEP)
7)	<u>Neonicotinoids</u>	5)	<u>Highly hazardous pesticides</u> (HHPs)
8)	<u>Organotins</u>	6)	<u>Lead in paint</u>
9)	<u>Phthalates</u>	7)	Nanotechnology and manufactured nanomaterials
10)	Polycyclic Aromatic Hydrocarbons (PAHs)	8)	Per- and polyfluoroalkyl substances (PFASs) and the
11)	<u>Triclosan</u>		transition to safer alternatives

In March 2022, at UNEA 5.2, UNEP was requested through <u>resolution 5/7</u> to seek views from Member States and other stakeholders on priorities for further work, building on existing measures and initiatives, and on potential further international action on the issues discussed in the Assessment Report on Issues of Concern. The resolution also requests the preparation of a summary analysis, taking into account the views received.

Through this call for inputs, UNEP intends to respond to UNEA's request by gathering information from stakeholders about the priorities for future work and potential further international action. The findings from this call for written inputs will inform the writing of the Summary Analysis. The Summary Analysis is expected to build upon the <u>SAICM Survey</u> which considered the 8 EPIs and other issues of concern.

## Available resources to support your responses:

All 19 issues of concern will be covered in this call for written inputs. A recording from an information webinar held on 27 April 2023, on the Assessment Report on Issues of Concern is <u>available here</u> for your reference. Further background information can be found below:

- Assessment report <u>here>></u>
- Annexes <u>here>></u>
- Factsheets on Issues of concern <u>here>></u>
- Catalogue of International Actions on Chemicals and Waste <u>here>></u>
- Survey from SAICM Sec on EPIs <u>here>></u>

The form for submitting written inputs will remain open until **15/08/2023** COB Central European time (CET).

Thank you for your kind support with this consultation.

## Personal Information:

Institution/Organization: IPEN (International Pollutants Elimination Network)

Type of Institution: Civil Society Organization

If relevant, please describe the membership coverage, geographical coverage and area of interest of your institution: IPEN is a global network of public interest NGOs in more than 125 countries forging a healthier world where people and the environment are no longer harmed by the production, use, and disposal of toxic chemicals.

Country: Global

## Questions

1. Arsenic Screening Question - Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on <u>Arsenic</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, e.g. Bisphenol A (BPA))

Yes
 No, I do not know enough about this issue
 No, this issue is not relevant to my country or institution
 No, other

a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on <u>Arsenic</u> for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

• Yes

⊖ No

- O Do not know
- a. Please provide a brief explanation for your response\*. Mining processes and intentional use of arsenic has led to widespread pollution of food, drinking water and air, causing human and environmental health impacts.

- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed

✓ Other: Mandatory disclosure of arsenic in products; remediation of contaminated environments financed through the polluter pays principle

- a. Please explain your response, including examples if possible\*. Arsenic containing products are exported over the whole world but no current international instrument controls and prohibits the use of arsenic. Also, the widespread contamination of drinking water, soil etc needs to be addressed.
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

✓ *Regulatory control measures* 

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)

- □ Options / guidance for economic instruments
- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: \_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge
  - Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives

✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

- □ None, there are no factors preventing action or progress
- ✓ Other: International action must lead to national and regional action, and vice versa
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (*Open space answer. Please share a weblink to the initiative(s) if available).*
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Arsenic</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - $\checkmark\,$  Agriculture and food production
  - $\checkmark$  Construction
  - ✓ Electronics
  - Energy
  - ✓ Health
  - √ Labour
  - ✓ Pharmaceuticals
  - Device private, blended finance
  - √ Retail
  - ✓ Textiles
  - □ Transportation
  - √ Waste
  - □ Other: chemicals and pesticide producers, mining sector
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...*).

Depending on the focus, multilateral agreements under UNEP, ILO, FAO and WHO could all be relevant for international action. Also, a new Convention on metals could include arsenic in its scope.

- a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
  - ✓ Agriculture and Food

- ✓ Biodiversity
- □ Climate Change
- ✓ Health
- ✓ Human Rights
- $\checkmark~$  Sustainable Consumption and Production
- ✓ World of Work
- □ *Other:*\_\_\_\_\_
- b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the* <u>UNEP assessment paper on linkages with other clusters</u> <u>related to chemicals and waste</u>):
- 8. What priority level do you attach to this issue for international action?
  - Very high
    High
    Medium
    Low
    Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of arsenic.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of arsenic.

## 2. Bisphenol A (BPA)

Screening Question - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on <u>Bisphenol-A</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Cadmium*)

• Yes

○ No, I do not know enough about this issue

○ No, this issue is not relevant to my country or institution

○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on <u>Bisphenol-A</u> for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

Yes

⊖ No

🔿 Do not know

- a. Please provide a brief explanation for your response\*. BPA is a known EDC used extensively in various food contact materials, in addition to many other applications causing human exposure and environmental pollution. However, action needs to be taken on all bisphenols to avoid regrettable substitution, not only BPA.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed

✓ Other: Mandatory disclosure of bisphenols in products; regulatory financial control measures that moves the market away from bisphenols

a. Please explain your response, including examples if possible\*. Bisphenol-containing products are exported over the whole world but no current international instrument controls and prohibits the use of bisphenols. In addition, no international instrument requires mandatory labelling and information sharing of bisphenol containing products.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

✓ *Regulatory control measures* 

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
 □ Options / guidance for economic instruments

- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge
  - Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives
  - $\checkmark$  Only coordinated international action can address the issue (e.g., due to transboundary
  - effects, or prevalence of chemicals in international trade)?

- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Bisphenol A</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production
  - ✓ Construction
  - ✓ Electronics
  - ✓ Energy
  - ✓ Health
  - √ Labour
  - Pharmaceuticals
  - □ Public, private, blended finance
  - √ Retail
  - ✓ Textiles
  - □ Transportation
  - √ Waste
  - □ Other: Chemicals and plastics industry
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? *The Plastics Treaty could address plastics containing bisphenols. In addition, depending on the focus, other multilateral agreements under UNEP, ILO, FAO and WHO could all be relevant for international action.* 
  - a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
    - ✓ Agriculture and Food
    - □ Biodiversity
    - Climate Change
    - ✓ Health
    - ✓ Human Rights
    - ✓ Sustainable Consumption and Production
    - ✓ World of Work
    - Other: \_\_\_\_\_
  - b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters</u> <u>related to chemicals and waste</u>):*
- 8. What priority level do you attach to this issue for international action?

- Very high
  High
  Medium
  Low
  Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of bisphenols.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of bisphenols.

## 3. Cadmium

#### Screening Question - Cadmium

Cadmium is a toxic metal that is naturally found in the Earth's crust, generally at low levels. Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure.

Please visit the two-page factsheet on <u>Cadmium</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Glyphosate*)

• Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution

○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Cadmium

Cadmium is a toxic metal that is naturally found in the Earth's crust, generally at low levels.   - I High
  - O Medium
  - Low

## O Very low

- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of cadmium.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of cadmium.

## 4. Glyphosate

#### Screening Question - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Lead*)

• Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- 🔿 No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

Yes
No
Do not know

- a. Please provide a brief explanation for your response\*. Glyphosate is one of the most widely used pesticides and causes harm to human health and the environment
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - □ *Other*:\_\_\_\_\_.
  - a. Please explain your response, including examples if possible\*. Glyphosate is used extensively globally and is exported globally.
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to*

the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).

✓ *Regulatory control measures* 

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)

- □ Options / guidance for economic instruments
- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- □ Measures supporting science-based knowledge and research

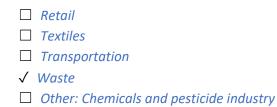

□ Other: PIC procedures for export

- a. Please explain your response, including examples if possible:
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge

Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors

- Difficulty with resource mobilisation
- □ Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary
- effects, or prevalence of chemicals in international trade)?
- □ None, there are no factors preventing action or progress
- Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- Can you point to existing initiatives that could be replicated or scaled up at the international level? The work to phase out of highly hazardous pesticides https://www.pan-uk.org/site/wp-content/uploads/PAN-HHP-List-2021.pdf
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production

  - Electronics
  - **Energy**
  - □ Health
  - □ Labour
  - □ Pharmaceuticals
  - Device private, blended finance

- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? Glyphosate could be included in the work to phase out HHPs under SAICM, in addition to other instruments
  - a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
    - ✓ Agriculture and Food
    - ✓ Biodiversity
    - ✓ Climate Change
    - ✓ Health
    - ✓ Human Rights
    - $\checkmark$  Sustainable Consumption and Production
    - ✓ World of Work
    - Other:\_\_\_\_\_

- 8. What priority level do you attach to this issue for international action?
  - O Very high
  - High
  - O Medium
  - Low
  - O Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of glyphosate

10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of glyphosate.

#### 5. Lead

#### Screening Question - Lead

Lead is a toxic metal that occurs naturally in the Earth's crust. It may exist in both inorganic and organic forms. The current global uses of lead are in batteries, rolled and extruded products, pigments and other product additives (e.g. for paints, cathode ray tubes, enamels and ceramics, PVC stabilisers), ammunition, alloys, cable sheathing and other uses

Please visit the two-page factsheet on <u>Lead</u> for more information on the topic.

- 1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Microplastics*)
  - Yes
  - No, I do not know enough about this issue
  - No, this issue is not relevant to my country or institution
  - O No, other
  - a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Lead

Lead is a toxic metal that occurs naturally in the Earth's crust. It may exist in both inorganic and organic forms. The current global uses of lead are in batteries, rolled and extruded products, pigments and other product additives (e.g. for paints, cathode ray tubes, enamels and ceramics, PVC stabilisers), ammunition, alloys, cable sheathing and other uses

Please visit the two-page factsheet on <u>Lead</u> for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (*If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9*)

Yes
No

- O Do not know
- a. Please provide a brief explanation for your response\*. The mining and intentional use of lead has led to widespread pollution of food, drinking water and air, causing human and environmental health impacts. No safe level of exposure can be determined.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ *Legally binding*
  - □ Soft law
  - ✓ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - □ *Other*:\_\_\_\_\_.
  - a. Please explain your response, including examples if possible\*. Depending on the source of lead pollution, different international approaches may be applicable. For example, export of lead acid batteries are covered by the legally binding Basel Convention, whereas important progress to eliminate lead paint has been achieved through the voluntary Global Alliance to Eliminate Lead Paint under SAICM.

- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).
  - ✓ *Regulatory control measures*

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)

- $\checkmark$  Options / guidance for economic instruments
- ✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- □ Measures supporting science-based knowledge and research

□ Other: Mandatory disclosure of lead in products; remediation of contaminated environments financed through the polluter pays principle

- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - ✓ Lack of technical capacity
  - □ Lack of scientific knowledge
  - ✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - ✓ Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives
  - □ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
  - □ None, there are no factors preventing action or progress
  - □ Other International action must lead to national and regional action, and vice versa
  - a. Please explain your response, including examples if possible:
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level?
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Lead</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - □ Agriculture and food production
  - ✓ Construction
  - ✓ Electronics
  - ✓ Energy
  - ✓ Health
  - √ Labour

- Pharmaceuticals
- Device private, blended finance
- √ Retail
- **Textiles**
- ✓ Transportation
- √ Waste
- □ Other: chemical producers
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue?

Depending on the focus, multilateral agreements under UNEP, ILO, and WHO could all be relevant for international action. Also, a new Convention on metals could include arsenic in its scope.

- a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
  - □ Agriculture and Food
  - ✓ Biodiversity
  - ✓ Climate Change
  - ✓ Health
  - ✓ Human Rights
  - ✓ Sustainable Consumption and Production
  - ✓ World of Work
  - Other:\_\_\_\_\_
- b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters</u> <u>related to chemicals and waste</u>):*
- 8. What priority level do you attach to this issue for international action?
  - O Very high
  - High
  - O Medium
  - Low
  - O Very low

- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of lead
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of lead.

## 6. Microplastics

#### Screening Question - Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on <u>Microplastics</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Neonicotinoids*)

• Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on <u>Microplastics</u> for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

- Do you agree with the assessment report that further international action is necessary\*? (*If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9*)
  - Yes

○ No

O Do not know

- a. Please provide a brief explanation for your response\*. Microplastics are extremely widespread pollutants that carry toxic chemicals both from their production, but also that adsorbed to the microplastics in nature. In addition, microplastics just because of their size has the potential to cause harm to human health and the environment.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - □ *Other*:\_\_\_\_\_.
  - a. Please explain your response, including examples if possible\*.

**3.** Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).* 

Regulatory control measures
 Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
 Options / guidance for economic instruments
 Voluntary measures and approaches: (such as Guidelines, principles and strategies)
 Measures supporting science-based knowledge and research

Other: \_\_\_\_\_

- a. Please explain your response, including examples if possible: Microplastics are not limited by national borders but are spread globally. No international agreement in place today addresses microplastics
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge

Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors

- Difficulty with resource mobilisation
- □ Lack of economically feasible green and sustainable alternatives

 $\checkmark$  Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

- □ None, there are no factors preventing action or progress
- Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? The Plastics Treaty could cover microplastics in its scope.
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Microplastics for more information on the topic. If you select "Other", please elaborate your response*).</u>
  - ✓ Agriculture and food production

- $\checkmark$  Construction
- ✓ Electronics
- ✓ Energy
- ✓ Health
- ✓ Labour
- ✓ Pharmaceuticals
- □ Public, private, blended finance
- √ Retail
- ✓ Textiles
- ✓ Transportation
- √ Waste
- □ Other: plastics and chemicals industry
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...*).
  - a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
    - ✓ Agriculture and Food
    - ✓ Biodiversity
    - ✓ Climate Change
    - ✓ Health
    - ✓ Human Rights
    - $\checkmark$  Sustainable Consumption and Production
    - ✓ World of Work
    - Other: \_\_\_\_\_
  - b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the* <u>UNEP assessment paper on linkages with other clusters</u> <u>related to chemicals and waste</u>):
- 8. What priority level do you attach to this issue for international action?

Very high
 High

- MediumLowVery low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of microplastics and products that generate microplastics
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of microplastics and products that generate microplastics

## 7. Neonicotinoids

#### Screening Question - Neonicotinoids

Neonicotinoids are a class of neuroactive insecticides chemically related to nicotine. Since the first neonicotinoid (imidacloprid) was commercialized in the 1990s, seven main compounds (acetamiprid, clothianidin, dinotefuran, imidacloprid, nitenpyram, thiamethoxam and thiacloprid) are now available on the global market. Today, neonicotinoids are used in protecting plants, livestock and pets from pest insects, as well as for malaria vector control, i.e., mosquitos, to protect humans, in more than 100 countries. Neonicotinoids are also used as biocides.

Please visit the two-page factsheet on <u>Neonicotinoids</u> for more information on the topic.

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

Yes
 No
 Do not know

- a. Please provide a brief explanation for your response\*. Neonicotinoids are widely used pesticides and causes harm to human health and the environment
- 2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).
  - ✓ *Legally binding*
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - □ *Other*:\_\_\_\_\_.
  - a. Please explain your response, including examples if possible\*. Neonicotinoids is used extensively globally and is exported globally.
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).
  - ✓ *Regulatory control measures*

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)

□ Options / guidance for economic instruments

- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- □ Measures supporting science-based knowledge and research
- □ Other: PIC procedures for export

#### a. Please explain your response, including examples if possible:

- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge
  - Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives

□ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

- □ None, there are no factors preventing action or progress
- Other: \_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_\_
- Can you point to existing initiatives that could be replicated or scaled up at the international level? The work to phase out of highly hazardous pesticides https://www.pan-uk.org/site/wp-content/uploads/PAN-HHP-List-2021.pdf
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Glyphosate</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production
  - □ Construction
  - Electronics
  - Energy
  - □ Health
  - □ Labour
  - Pharmaceuticals
  - Device private, blended finance
  - Retail
  - □ Textiles
  - □ Transportation

√ Waste

- □ Other: Chemicals and pesticide industry
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? Neonicotinoids could be included in the work to phase out HHPs under SAICM, in addition to other instruments
  - a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
    - ✓ Agriculture and Food
    - ✓ Biodiversity
    - ✓ Climate Change
    - ✓ Health
    - ✓ Human Rights
    - ✓ Sustainable Consumption and Production
    - ✓ World of Work
    - Other:\_\_\_\_\_

  - High
  - O Medium
  - Low
  - O Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of Neonicotinoids
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of Neonicotinoids

## 8. Organotins

#### Screening Question - Organotins

Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please visit the two-page factsheet on <u>Organotins</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Phthalates*)

O Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

## 9. Phthalates

### Screening Question - Phthalates

Phthalates are a large family of semi-volatile organic compounds. They are a group of plasticizers with softening and elastic effects, and they are produced in high volumes to be used in products such as vinyl flooring, adhesives, detergents, lubricating oils, automotive plastics, plastic clothing and personal care products. Phthalates accounted for 65 per cent of global consumption of plasticizers in 2017.

Please visit the two-page factsheet on <u>Phthalates</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Polycyclic Aromatic Hydrocarbons (PAHs)*)

• Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- 🔿 No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

### Technical Questions - Phthalates

Phthalates are a large family of semi-volatile organic compounds. They are a group of plasticizers with softening and elastic effects, and they are produced in high volumes to be used in products such as vinyl flooring, adhesives, detergents, lubricating oils, automotive plastics, plastic clothing and personal care products. Phthalates accounted for 65 per cent of global consumption of plasticizers in 2017.

### Please answer the questions below that are relevant to your organization/ country/ region:

- Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
  - Yes
     No
     Do not know
  - a. Please provide a brief explanation for your response\*. Phthalates are extremely widespread toxic plastic additives, also known as "everywhere chemicals".
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ *Legally binding*
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed

✓ Other: Mandatory disclosure of bisphenols in products; regulatory financial control measures that moves the market away from bisphenols

a. Please explain your response, including examples if possible\*. Phthalate-containing products are exported over the whole world but no current international instrument controls and prohibits the use of phthalates. In addition, no international instrument requires mandatory labelling and information sharing of bisphenol containing products.

- a. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).*
- ✓ *Regulatory control measures*

$\checkmark$	Information based and enforcement tools (such as Scientific and technical and guidelines,
Gι	uidelines and tools for enforcement, Awareness tools (including of consumers)
_

  - Very high
     High
  - O Medium
  - Low
  - O Very low
- g. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of phthalates.

Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of phthalates.

10. Polycyclic Aromatic Hydrocarbons (PAHs) Screening Question - Polycyclic Aromatic Hydrocarbons (PAHs)

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on <u>Polycyclic Aromatic Hydrocarbons</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Triclosan*)

# Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

## Technical Questions - Polycyclic Aromatic Hydrocarbons (PAHs)

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. # 11. Triclosan

## Screening Question - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on <u>Triclosan</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Chemicals in Products (CiP)*)

Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution

○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

### Technical Questions - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on <u>Triclosan</u> for more information on the topic.

### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

Yes
No
Do not know

- a. Please provide a brief explanation for your response\*. In addition to its toxicity, use of triclosan exposure increases resistance to antibiotics.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - Other:\_\_\_\_\_
  - a. Please explain your response, including examples if possible\*. Antibiotic resistance is a global problem that is not stopped by national borders and needs global solutions
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

$\checkmark$	Regu	latory	control	measures
--------------	------	--------	---------	----------

✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)

□ Options / guidance for economic instruments

- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- □ Measures supporting science-based knowledge and research
- Other: \_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge

	Difficulties in sharing	g knowledge	and c	coordinating	action	among	different	stakeholde	rs
and	d across sectors								

- Difficulty with resource mobilisation
- □ Lack of economically feasible green and sustainable alternatives
- ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- □ None, there are no factors preventing action or progress
- Other: \_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (*Open space answer. Please share a weblink to the initiative(s) if available*).
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Triclosan</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production
  - □ Construction
  - □ Electronics
  - Energy
  - √ Health
  - □ Labour
  - ✓ Pharmaceuticals

- Device private, blended finance
- √ Retail
- **Textiles**
- Transportation
- √ Waste
- Other:
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...*).

WHO would be well suited to lead this work in regards to its health impacts and the antibiotic resistance.

- 8. Which international agendas have important linkages with this issue of concern? (*Multiple* answers based on list below. For more information, please see the <u>UNEP assessment paper on</u> linkages with other clusters related to chemicals and waste):
  - ✓ Agriculture and Food
  - ✓ Biodiversity
  - □ Climate Change
  - √ Health
  - □ Human Rights
  - □ Sustainable Consumption and Production
  - U World of Work
  - Other:\_\_\_\_\_
  - a. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters</u> <u>related to chemicals and waste</u>):*
- 9. What priority level do you attach to this issue for international action?
  - O Very high
  - High
  - O Medium
  - Low
  - O Very low

- 10. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of triclosan in products.
- 11. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of triclosan in products

# 12. Chemicals in products (CiP)

## Screening Question - Chemicals in products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, "with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle". SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on <u>Chemicals in Products</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Endocrine-disrupting chemicals (EDCs)*)

Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

### Technical Questions - Chemicals in products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, "with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle". SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on <u>Chemicals in Products</u> for more information on the topic.

### Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

Yes
No
Do not know

- a. Please provide a brief explanation for your response\*. An extensive amount of chemicals know or suspected to be toxic is used in products without any mandatory requirement for disclosure. Many of these chemicals are not regulated, and not addressed by current global agreements.
- 2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).
  - ✓ *Legally binding*
  - □ Soft law
  - $\checkmark$  Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - Other: \_\_\_\_\_
  - a. Please explain your response, including examples if possible\*.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

## ✓ *Regulatory control measures*

- ✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- □ Options / guidance for economic instruments
- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- □ Measures supporting science-based knowledge and research
- Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge

Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors

Difficulty with resource mobilisation

□ Lack of economically feasible green and sustainable alternatives

✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

□ None, there are no factors preventing action or progress

□ Other: The regulatory process is far slower than the rate of development of new chemicals, and chemicals are often addressed individually instead of in a group approach

- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (*Open space answer. Please share a weblink to the initiative(s) if available*).
- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Chemicals in Products</u> for more information on the topic. If you select "Other", please elaborate your response).*

- □ Agriculture and food production
- ✓ Construction
- ✓ Electronics
- □ Energy
- ✓ Health
- √ Labour
- Pharmaceuticals
- Device Public, private, blended finance
- √ Retail
- ✓ Textiles
- □ Transportation
- √ Waste
- □ Other: Chemicals producers
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Depending on the focus, multilateral agreements under UNEP, ILO, WHO and other IOMCs could all be relevant for international action.

- a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
  - □ Agriculture and Food
  - □ Biodiversity
  - □ Climate Change
  - ✓ Health
  - ✓ Human Rights
  - $\checkmark$  Sustainable Consumption and Production
  - ✓ World of Work
  - Other: \_\_\_\_\_
- b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste</u>):*
- 8. What priority level do you attach to this issue for international action?

O Very high

- High
  Medium
  Low
  Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of toxic chemicals in products, couple with mandatory transparency measures to disclose all chemicals used in products.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of toxic chemicals in products, couple with mandatory transparency measures to disclose all chemicals used in products.

# 13. Endocrine-disrupting chemicals (EDCs)

# Screening Question - Endocrine-disrupting chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided "to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders" and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on <u>Endocrine Disrupting Chemicals</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, Environmentally Persistent Pharmaceutical Pollutants (EPPPs))

Yes

- No, I do not know enough about this issue
- $\bigcirc$  No, this issue is not relevant to my country or institution

○ No, other

b. If you selected "No, other" in the previous question, please elaborate here:

## *Technical Questions - Endocrine-disrupting chemicals (EDCs)*

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided "to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders" and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

# 14. Environmentally Persistent Pharmaceutical Pollutants (EPPPs) Screening Question - Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution "considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority", "recognizes the current knowledge gaps on exposure to and the effects of EPPP", "decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders", and "requests all interested stakeholders and organizations to provide support, including expertise, financial and in-kind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance"

Please visit the two-page factsheet on <u>Environmentally Persistent Pharmaceutical Pollutants</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, Hazardous substances within the life cycle of electrical and electronic products (HSLEEP))

O Yes

- No, I do not know enough about this issue
- O No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

15. Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

*Screening Question - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)* 

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels, significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on <u>Hazardous Substances within the Life cycle of Electrical and</u> <u>Electronic Products</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, Highly Hazardous Pesticides (HHPs))

Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- 🔿 No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...*).

The Basel Convention, SAICM, ILO, WHO, UNEP

- a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
  - □ Agriculture and Food
  - □ Biodiversity
  - ✓ Climate Change
  - ✓ Health
  - ✓ Human Rights
  - ✓ Sustainable Consumption and Production
  - ✓ World of Work
  - Other: \_\_\_\_\_
- b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste</u>):*
- 8. What priority level do you attach to this issue for international action?

- Very high
  High
  Medium
  Low
  Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of toxic chemicals in electronics and their production, coupled with

mandatory transparency measures to disclose all chemicals used in the electronics.

10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of toxic chemicals in electronics and their production, coupled with mandatory transparency measures to disclose all chemicals used in the electronics.

# 16. Highly hazardous pesticides (HHPs) Screening Question - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous".

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported "concerted action to address HHPs in the context of SAICM" and encouraged "relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises", and welcomed "the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC"

Please visit the two-page factsheet on <u>Highly Hazardous Pesticides</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, Lead in Paint)

• Yes

- No, I do not know enough about this issue
- O No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

# Technical Questions - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous".

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported "concerted action to address HHPs in the context of SAICM" and encouraged "relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises", and welcomed "the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC"

Please visit the two-page factsheet on <u>Highly Hazardous Pesticides</u> for more information on the topic.

# Please answer the questions below that are relevant to your organization/ country/ region:

Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

• Yes

○ No

- O Do not know
- Please provide a brief explanation for your response\*. HHPs are highly toxic and cause widespread harm to human health and the environment through their intended use. They are also often produced and exported from countries where they have been prohibited to countries with weaker regulatory controls.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding

□ Soft law

□ Information sharing and awareness/ Voluntary initiatives

- □ No international actions are needed
- □ *Other*:\_\_\_\_\_.
- a. Please explain your response, including examples if possible\*. While some pesticides are controlled through the PIC procedure in the Rotterdam Convention, most HHPs are not.
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

✓ Regulatory control measures
 □ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
 □ Options / guidance for economic instruments
 □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
 □ Measures supporting science-based knowledge and research

- □ Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge
  - Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives

✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

- □ None, there are no factors preventing action or progress
- □ Other:\_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (*Open space answer. Please share a weblink to the initiative(s) if available).*

- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Highly Hazardous Pesticides</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production
  - □ Construction
  - □ Electronics
  - Energy
  - ✓ Health
  - √ Labour
  - Pharmaceuticals
  - Device Public, private, blended finance
  - 🗆 Retail
  - Textiles
  - □ Transportation
  - √ Waste
  - □ Other: chemicals and pesticide producers
- 7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...*).

The BRS Conventions, SAICM. The proposed Global Alliance on HHPs should be established at ICCM5 to further conduct work on this issue.

- a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the <u>UNEP</u> assessment paper on linkages with other clusters related to chemicals and waste):
  - ✓ Agriculture and Food
  - ✓ Biodiversity
  - ✓ Climate Change
  - √ Health
  - ✓ Human Rights
  - $\checkmark$  Sustainable Consumption and Production
  - ✓ World of Work
  - □ Other:\_\_\_\_\_

- b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the <u>UNEP assessment paper on linkages with other clusters related to chemicals and waste*):</u>
- 8. What priority level do you attach to this issue for international action?
  - Very high
    High
    Medium
    Low
    Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use and export of HHPs.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use and export of HHPs.

# 17. Lead in paint

# Screening Question - Lead in paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through "lead paint", or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, "Lead in Paint" was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt "legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure" and to have all paint manufacturers eliminate "the use of added lead compounds in priority areas" by 2020.

Please visit the two-page factsheet on <u>Lead in Paint</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, Nanotechnology and manufactured nanomaterials)

O Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

#### Technical Questions - Lead in paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through "lead paint", or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, "Lead in Paint" was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt "legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure" and to have all paint manufacturers eliminate "the use of added lead compounds in priority areas" by 2020.

- 10. Is there any priority further work you would like to suggest at the regional level\*? (*Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

# 18. Nanotechnology and manufactured nanomaterials Screening Question - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns "Nanotechnology and manufactured nanomaterials" was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

Please visit the two-page factsheet on <u>Nanotechnology and manufactured nanomaterials</u> for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the next issue of concern, *Per- and polyfluoroalkyl substances (PFASs)*)

O Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

### Technical Questions - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns "Nanotechnology and manufactured nanomaterials" was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

# 19. Per- and polyfluoroalkyl substances (PFASs) Screening Question - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF2–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some "long-chain" PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified "managing PFASs and the transition to safer alternatives" as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders "to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible"

Please visit the two-page factsheet on <u>Per- and polyfluoroalkyl substances (PFASs) and the transition</u> to safer alternatives for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select* only 1 option below. If you select a "No" option, you may move to the Conclusion page)

Yes

- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- O No, other
- a. If you selected "No, other" in the previous question, please elaborate here:

### Technical Questions - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF2–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some "long-chain" PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders "to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible"

Please visit the two-page factsheet on <u>Per- and polyfluoroalkyl substances (PFASs) and the transition</u> to safer alternatives for more information on the topic.

#### Please answer the questions below that are relevant to your organization/ country/ region:

- Do you agree with the assessment report that further international action is necessary\*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
  - Yes
    No
    Do not know
  - Please provide a brief explanation for your response\*. All PFAS needs to be regulated as a class to prevent further contamination and human and environmental health harm.
     Since they are extremely persistent, PFAS pollution must be prevented.
- 2. What types of international actions should be taken? (*Multiple answers based on the catalogue of action, Please refer to the <u>catalogue of international actions</u> prepared by UNEP for more information on available options).* 
  - ✓ Legally binding
  - □ Soft law
  - □ Information sharing and awareness/ Voluntary initiatives
  - □ No international actions are needed
  - □ *Other*:\_\_\_\_\_.

- a. Please explain your response, including examples if possible\*. Voluntary measures are clearly not enough to ban all PFAS
- 3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options*).

✓ Regulatory control measures

□ Information based and enforcement tools (such as Scientific and technical and guideline	s,
Guidelines and tools for enforcement, Awareness tools (including of consumers)	
Options / guidance for economic instruments	

- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: \_\_\_\_\_
- a. Please explain your response, including examples if possible: \_\_\_\_\_
- 4. What factors prevent action/progress on addressing the issue in your country/ organization (*Multiple answers based on list below*)?
  - □ Lack of technical capacity
  - □ Lack of scientific knowledge
  - Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
  - Difficulty with resource mobilisation
  - □ Lack of economically feasible green and sustainable alternatives
  - ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
  - □ None, there are no factors preventing action or progress
  - □ Other: lack of political will, strong pressure form vested financial interests
  - a. Please explain your response, including examples if possible: \_\_\_\_\_
- Can you point to existing initiatives that could be replicated or scaled up at the international level? The universal PFAS restriction under discussion in the EU https://echa.europa.eu/sv/hot-topics/perfluoroalkyl-chemicals-pfas

- 6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice*. *Please visit the two-page factsheet on <u>Per- and polyfluoroalkyl substances (PFASs)</u> for more information on the topic. If you select "Other", please elaborate your response).* 
  - ✓ Agriculture and food production
  - $\checkmark$  Construction
  - ✓ *Electronics*

  - Very high
     High
     Medium
  - O Low
  - O Very low
- 9. Is there any priority further work you would like to suggest at the national level\*? Regulatory controls to prohibit the use of PFAS in products, couple with mandatory transparency measures to disclose all chemicals used in products.
- 10. Is there any priority further work you would like to suggest at the regional level\*? Regulatory controls to prohibit the use of PFAS in products, couple with mandatory transparency measures to disclose all chemicals used in products.

# Conclusion:

Thank you for having reached this point in the form. You are now on the last page. Below are a final set of questions covering all 19 issues of concern.

### GCO-II issues:

<u>Arsenic</u> | <u>Cadmium</u> | <u>Glyphosate</u> | <u>Lead</u> | <u>Microplastics</u> | <u>Neonicotinoids</u> | <u>Organotins</u> | <u>Phthalates</u> | <u>Polycyclic Aromatic Hydrocarbons</u> (PAHs) | <u>Triclosan</u> | <u>Bisphenol A</u> (BPA)

#### List of SAICM issues:

<u>Chemicals in products</u> (CiP) | <u>Endocrine-disrupting chemicals</u> (EDCs) | <u>Environmentally Persistent</u> <u>Pharmaceutical Pollutants</u> (EPPPs) | <u>Hazardous substances within the life cycle of electrical and</u> <u>electronic products</u> (HSLEEP) | <u>Highly hazardous pesticides</u> (HHPs) | <u>Lead in paint</u> | <u>Nanotechnology</u> <u>and manufactured nanomaterials</u> | <u>Per- and polyfluoroalkyl substances (PFASs) and the transition to</u> <u>safer alternatives</u>

Please submit your completed form via email by **15/08/2023** COB Central European time (CET).

- From the list of 19 issues, which issue(s) do you think is/are the most urgent? We believe that all these issues need to be addressed urgently, considering that they have been identified and prioritized in various processes.
  - Arsenic □ Bisphenol A (BPA) Cadmium □ *Glyphosate* Lead □ *Microplastics* □ Neonicotinoids □ Organotins □ Phthalates Polycyclic Aromatic Hydrocarbons (PAHs) Triclosan Chemicals in products (CiP) □ Endocrine-disrupting chemicals (EDCs) Environmentally Persistent Pharmaceutical Pollutants (EPPPs) □ Hazardous substances within the life cycle of electrical and electronic products (HSLEEP) □ Highly hazardous pesticides (HHPs) Lead in paint □ Nanotechnology and manufactured nanomaterials □ Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives a. Please explain your response. (Open space to elaborate).

From the list of 19 issues, which issue(s) is/are the most actionable?
 For the same reason as stated above, action can and needs to be taken on all these issues.

□ Arsenic
Bisphenol A (BPA)
Cadmium
□ Glyphosate
Lead
Microplastics
□ Neonicotinoids
Organotins
Phthalates
Polycyclic Aromatic Hydrocarbons (PAHs)
Triclosan
Chemicals in products (CiP)
Endocrine-disrupting chemicals (EDCs)
Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
□ Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
☐ Highly hazardous pesticides (HHPs)
Lead in paint
Nanotechnology and manufactured nanomaterials

- □ Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives
- b. Please explain your response. (Open space to elaborate).
- Are there any other observations you wish to note? Having only one category with financial control measures makes it hard to respond to this option, since there are a range of quite different options (taxes, procurement protocols, etc). Also, the aspect of especially impacted groups and countries needs to be included in the assessment of these issues and the appropriate international actions.
