UNEP’s Call for Written Inputs on Issues of Concern: Priorities for further work and potential further international action

Introduction

UNEP is undertaking a consultation on priorities for further work and potential further international action on 19 issues of concern. This call for written inputs is being conducted to gather relevant information from stakeholders and views about the next steps that should be taken on issues of concern.

The call for inputs will address 19 issues of concern and you may wish to only provide answers for issues of concern that are of relevance to your organization/country. At the start of each section, you will be asked whether you would like to provide responses on each specific issue. If you choose “No” on the introduction page of each issue you may proceed to the next issue of concern.

Please be aware that the submitted responses will be made available on the UNEP website indicating the stakeholder affiliation/government. The names and contact details of the respondents will not be published on the UNEP website. Further information on UNEP’s consultation process can be found here.

We highly recommend coordinating responses within your stakeholder affiliation/government. Please complete this form for collecting written inputs by 15/08/2023 COB Central European time (CET).

For those using this MS word version, kindly return the completed word version of the call for written inputs. Please remember to save your work often, due to the addition of ActiveX controls below (such as option buttons and checkboxes), the autosave feature is not available on this form.

Please enter your email details.

Email:

Background

In 2020, UNEP developed an Assessment Report on Issues of Concern, to inform the international community about the current situation of specific chemicals and waste issues. It was based on a review of published evidence. It was intended to support discussion at the fifth session of the UN Environment Assembly (UNEA 5) and other international forums working towards sound management of chemicals and waste. The Assessment Report assessed the ability of existing actions to address current environmental and human exposure to individual chemicals and groups of chemicals. It looked at 11 issues with emerging evidence of risks identified by the Global Chemicals Outlook-II and the 6 Emerging Policy Issues (EPIs) and two other Issues of Concern identified under the Strategic Approach to International Chemicals Management (SAICM). The report concluded that concerted international action by all stakeholders at all levels is urgently required.

In March 2022, at UNEA 5.2, UNEP was requested through resolution 5/7 to seek views from Member States and other stakeholders on priorities for further work, building on existing measures and initiatives, and on potential further international action on the issues discussed in the Assessment Report on Issues of Concern. The resolution also requests the preparation of a summary analysis, taking into account the views received.

Through this call for inputs, UNEP intends to respond to UNEA’s request by gathering information from stakeholders about the priorities for future work and potential further international action. The findings from this call for written inputs will inform the writing of the Summary Analysis. The Summary Analysis is expected to build upon the SAICM Survey which considered the 8 EPIs and other issues of concern.

Available resources to support your responses:
All 19 issues of concern will be covered in this call for written inputs. A recording from an information webinar held on 27 April 2023, on the Assessment Report on Issues of Concern is available here for your reference. Further background information can be found below:

- Assessment report here>>
- Annexes here>>
- Factsheets on Issues of concern here>>
- Catalogue of International Actions on Chemicals and Waste here>>
- Survey from SAICM Sec on EPIs here>>

The form for submitting written inputs will remain open until **15/08/2023** COB Central European time (CET).

Thank you for your kind support with this consultation.
Personal Information:

Institution/Organization: MINISTER OF ENVIRONMENT IN NATURAL RESOURCES

Type of Institution: (Government | Intergovernmental Organization | Civil Society Organization | Business/Private Sector | Academia | Other)

GOVERNMENT

If relevant, please describe the membership coverage, geographical coverage and area of interest of your institution:

NATIONAL

Country: EL SALVADOR
Questions

1. Arsenic

*Screening Question - Arsenic*

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth’s crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on Arsenic for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, e.g. Bisphenol A (BPA))*

   - Yes
   - No, I do not know enough about this issue
   - No, this issue is not relevant to my country or institution
   - No, other

   a. If you selected “No, other” in the previous question, please elaborate here:

   **Technical Questions - Arsenic**

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth’s crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on Arsenic for more information on the topic.

**Please answer the questions below that are relevant to your organization/ country/ region:**

1. Do you agree with the assessment report that further international action is necessary? *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)*

   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*: __________________

Arsenic is found naturally due to the violent activity of the country and it is also used in the form of salts or arsenic compounds in some activities of the national industry.
2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Legally binding
- Soft law
- Information sharing and awareness/ Voluntary initiatives
- No international actions are needed
- Other: ______.

a. Please explain your response, including examples if possible*: ______________

It is necessary to expand the technical and scientific studies that allow a better knowledge of the risk of arsenic and its different uses in the sectors, as well as the availability of alternatives for the elimination and substitution of said substance.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: ______

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilisation
- Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______
   The amount of products or goods that enter the country that have arsenic or arsenic compounds in the formulation is unknown.

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Arsenic for more information on the topic. If you select "Other", please elaborate your response).
   ✓ Agriculture and food production
   ☐ Construction
   ✓ Electronics
   ✓ Energy
   ✓ Health
   ☐ Labour
   ✓ Pharmaceuticals
   ☐ Public, private, blended finance
   ☐ Retail
   ✓ Textiles
   ☐ Transportation
   ✓ Waste
   ☐ Other: ________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

   a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
      ✓ Agriculture and Food
      ✓ Biodiversity
      ☐ Climate Change
      ✓ Health
b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

Potential cross-border affectation with effects on biotic resources, water resources and exposed populations

8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

not available

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Conduct investigations in transboundary basins for arsenic, lead and cadmium
2. Bisphenol A (BPA)

Screening Question - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on Bisphenol-A for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Cadmium)

- Yes
- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on Bisphenol-A for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - ☑ Yes
   - ☐ No
   - ☐ Do not know

   a. Please provide a brief explanation for your response*. __________________

   There are many documents with information on the risks of BPA and initiatives in the past aimed at publicizing the risks of unintentional consumption of these compounds through objects, utensils or other elements of daily use. To date, these initiatives have not managed to establish a control mechanism that allows communication and regulation of the risk to health and the environment.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - ✓ Legally binding
   - ☐ Soft law
   - ✓ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible*: ________________
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
✓ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Bisphenol A for more information on the topic. If you select "Other", please elaborate your response).

✓ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
✓ Health
☐ Labour
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Promote regional regulations that guarantee labeling, risk communication and the prohibition of the use of BPA in containers for food and cosmetic products.
Cadmium

*Screening Question - Cadmium*

Cadmium is a toxic metal that is naturally found in the Earth’s crust, generally at low levels. Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure. Please visit the two-page factsheet on Cadmium for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a ”No” option, you may move to the next issue of concern, Glyphosate)*

   - 🌿 Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

a. If you selected ”No, other” in the previous question, please elaborate here:
Cadmium is a toxic metal that is naturally found in the Earth’s crust, generally at low levels. Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure.

Please visit the two-page factsheet on Cadmium for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. ________________

   The persistence, bioaccumulation, and mobility of cadmium associated with releases and emissions are identified as potential effects in different regions.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - ✓ Legally binding
   - ☐ Soft law
   - ✓ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible*. ________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Agriculture and food production
☐ Construction
✓ Electronics
✓ Energy
✓ Health
☐ Labour
✓ Pharmaceuticals
☐ Public, private, blended finance
☐ Retail
✓ Textiles
☐ Transportation
✓ Waste
☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

The Minamata Agreement could be extended to cover other metals and metalloids with risks to human health and the environment.

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food
✓ Biodiversity
☐ Climate Change
✓ Health
✓ Human Rights
✓ Sustainable Consumption and Production
☐ World of Work
✓ Other: SAICM

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

☒ Very high
☐ High
☐ Medium
☐ Low
☐ Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Promote regional regulations (Central American technical regulations) that consider the inclusion in the labeling and registration of products that may contain cadmium and its compounds among its constituents.
3. Glyphosate

*Screening Question - Glyphosate*

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on [Glyphosate](#) for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Lead)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on Glyphosate for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

   Glyphosate, because it is organophosphate, is from a group of chemical substances widely known for its risks to health and the environment. The information related to the risk of being a category II carcinogenic agent is of concern, a situation that warrants a review of the national registration and labeling processes for products containing said substance.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*. __________________

   On the labels of commercial products that contain Glyphosate, it has been identified that it is declared as: "Carcinogenicity: It is not carcinogenic"
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- ✓ Measures supporting science-based knowledge and research
- ☐ Other: __________

  a. Please explain your response, including examples if possible: ______

   The international trade of commercial products containing Glyphosate should be a priority in its regulation.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

- ✓ Lack of technical capacity
- ✓ Lack of scientific knowledge
- ✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- ✓ Difficulty with resource mobilisation
- ✓ Lack of economically feasible green and sustainable alternatives
- ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- ☐ None, there are no factors preventing action or progress
- ☐ Other: ______________

  a. Please explain your response, including examples if possible: ______

   The authorization for the registration of pesticides and inputs in the region should have a technical opinion on the toxicological (sanitary) and environmental aspects issued by the competent authorities in the matter, prior to the issuance of a registration or recognition of registration in any country of the region.

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

Preparation of regional regulatory documents on pesticides through the Central American Technical Regulations (RTCA, for its acronym in Spanish) through the Central American Integration Secretariat (SIECA).
6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Glyphosate for more information on the topic. If you select "Other", please elaborate your response).

- Agriculture and food production
- Construction
- Electronics
- Energy
- Health
- Labour
- Pharmaceuticals
- Public, private, blended finance
- Retail
- Textiles
- Transportation
- Waste
- Other

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Rotterdam Convention

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Include Glifosaro in Agreement No. 16 in the field of Agriculture

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Establish a list of priority pesticides because they are highly dangerous formulations, for their prohibition or restriction within the framework of the Central American technical regulations on pesticides (RTCA/COMIECO/SIECA).
4. Lead

*Screening Question - Lead*

Lead is a toxic metal that occurs naturally in the Earth’s crust. It may exist in both inorganic and organic forms. The current global uses of lead are in batteries, rolled and extruded products, pigments and other product additives (e.g. for paints, cathode ray tubes, enamels and ceramics, PVC stabilisers), ammunition, alloys, cable sheathing and other uses.

Please visit the two-page factsheet on [Lead](#) for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Microplastics)*

   - ☑ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Lead

Lead is a toxic metal that occurs naturally in the Earth’s crust. It may exist in both inorganic and organic forms. The current global uses of lead are in batteries, rolled and extruded products, pigments and other product additives (e.g. for paints, cathode ray tubes, enamels and ceramics, PVC stabilisers), ammunition, alloys, cable sheathing and other uses.

Please visit the two-page factsheet on Lead for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? *(If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)*

   - [ ] Yes
   - [ ] No
   - [ ] Do not know

   a. Please provide a brief explanation for your response*. __________________

   Lead is widely used and has the ability to be incorporated into different environmental strata, with organic lead compounds presenting the greatest risks to health and the environment.

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*

   - [✓] Legally binding
   - [ ] Soft law
   - [✓] Information sharing and awareness/ Voluntary initiatives
   - [ ] No international actions are needed
   - [ ] Other: ______.

   a. Please explain your response, including examples if possible*. __________________

   Lead has been incorporated into the list of the 10 most dangerous substances by international agencies (WHO/UNEP), which is why most countries have promoted strategies for its regulation or for products that contain it.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*
✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
✓ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

✓ Lack of technical capacity
☐ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
✓ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: __________

a. Please explain your response, including examples if possible: ______
The country presented difficulties for the regulation of lead in paints and for the final disposal of waste containing lead (ashes and slag and contaminated soil) generated by the smelting and recycling industry of lead for the manufacture of automotive batteries

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

Reactivate the project to support the implementation of the regulatory framework for lead in paints

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Lead for more information on the topic. If you select "Other", please elaborate your response).

☐ Agriculture and food production
☐ Construction
☐ Electronics
✓ Energy
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Expand the Minamata Convention for international attention to other toxic metals and metalloids of global interest.

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

☐ Agriculture and Food  ☑ Biodiversity  ☑ Climate Change  ☑ Health  ☑ Human Rights  ☑ Sustainable Consumption and Production  ☑ World of Work  ☐ Other: ___________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

☐ Very high  ☑ High  ☐ Medium  ☐ Low
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available)*.

Return to the issue of the legal framework for lead levels in paints.

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available)*.

Return to the issue of the legal framework for lead levels in paints, as a regional activity under SIECA. It could be based on existing regulations in the Central American region.
5. Microplastics

*Screening Question - Microplastics*

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on Microplastics for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Neonicotinoids)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on Microplastics for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)
   - ☑ Yes
   - ☐ No
   - ☐ Do not know

   a. Please provide a brief explanation for your response*. __________________

   The use of microplastics is widely disseminated in different products and the risk of these materials is not known in many countries, nor are there studies on the subject in them.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - ✓ Legally binding
   - ☐ Soft law
   - ✓ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible*. __________________

   It is necessary to have more technical and scientific information on the risk levels posed by microplastics and their existence in many components, supplies and consumer products that may contain them.
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*.

- ✓ Regulatory control measures
- ✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- ✓ Options / guidance for economic instruments
- □ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- ✓ Measures supporting science-based knowledge and research
- □ Other: __________

a. Please explain your response, including examples if possible: ______

Voluntary measures are not sufficient or feasible for developing countries, where often there are no mechanisms for monitoring or mitigation of risks associated with new technologies and specific studies on contamination generated by microplastics need to be carried out.

4. What factors prevent action/progress on addressing the issue in your country/ organization *(Multiple answers based on list below)*?

- ✓ Lack of technical capacity
- ✓ Lack of scientific knowledge
- ✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- ✓ Difficulty with resource mobilisation
- □ Lack of economically feasible green and sustainable alternatives
- ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- □ None, there are no factors preventing action or progress
- □ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? *(Open space answer. Please share a weblink to the initiative(s) if available)*.

6. Which sectors/value chains need to be closely involved in developing solutions? *(Multi-choice. Please visit the two-page factsheet on Microplastics for more information on the topic. If you select "Other", please elaborate your response)*.

- ✓ Agriculture and food production
- □ Construction
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Regulation Forum for Latin America (LARFC)

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food
✓ Biodiversity
✓ Climate Change
✓ Health
✓ Human Rights
✓ Sustainable Consumption and Production
☐ World of Work
☐ Other: __________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

✓ Very high
☐ High
☐ Medium
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Establish microplastic analysis laboratories in the Latin American and Caribbean region that facilitate research and baseline establishment for the presence of microplastics, especially in bodies of water.
6. Neonicotinoids

Screening Question - Neonicotinoids

Neonicotinoids are a class of neuroactive insecticides chemically related to nicotine. Since the first neonicotinoid (imidacloprid) was commercialized in the 1990s, seven main compounds (acetamiprid, clothianidin, dinotefuran, imidacloprid, nitenpyram, thiamethoxam and thiacloprid) are now available on the global market. Today, neonicotinoids are used in protecting plants, livestock and pets from pest insects, as well as for malaria vector control, i.e., mosquitos, to protect humans, in more than 100 countries. Neonicotinoids are also used as biocides.

Please visit the two-page factsheet on Neonicotinoids for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Organotins)

- Yes
- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Neonicotinoids

b. Please explain your response, including examples if possible. *(Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):*

8. What priority level do you attach to this issue for international action?

☐ Very high  
☐ High  
☐ Medium  
☐ Low  
☐ Very low

9. Is there any priority further work you would like to suggest at the national level? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
7. Organotins

Screening Question - Organotins

Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please visit the two-page factsheet on Organotins for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Phthalates)

☐ Yes
☐ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

   Tin compounds could be causing serious damage to health, which should be addressed globally.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*: __________________

   It is necessary to disseminate risk studies and prevent exposure to tin and its compounds, especially in food or food packaging.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to
the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
✓ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

✓ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

Regulations on issues of regional Central American interest in food matters, with health and commercial interests.

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Organotins for more information on the topic. If you select "Other", please elaborate your response).

✓ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

United Nations Food Organization and World Health Organization through the Codex Alimentarius

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food
☐ Biodiversity
☐ Climate Change
✓ Health
✓ Human Rights
✓ Sustainable Consumption and Production
☐ World of Work
☐ Other: ___________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

✓ Very high
☐ High
☐ Medium
☐ Low
☐ Very low
9. Is there any priority further work you would like to suggest at the national level*? (*Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Conduct a study on the uses of organic tin compounds in the country's food industry.

10. Is there any priority further work you would like to suggest at the regional level*? (*Open space to elaborate. Please share a weblink to the suggestion(s) if available).

address the issue of organic tin compounds in the regional groups that review the regulations associated with the food industry in the Central American region.

8. Phthalates

Screening Question - Phthalates

Phthalates are a large family of semi-volatile organic compounds. They are a group of plasticizers with softening and elastic effects, and they are produced in high volumes to be used in products such as vinyl flooring, adhesives, detergents, lubricating oils, automotive plastics, plastic clothing and personal care products. Phthalates accounted for 65 per cent of global consumption of plasticizers in 2017.

Please visit the two-page factsheet on Phthalates for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (*Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Polycyclic Aromatic Hydrocarbons (PAHs))

☐ Yes
☐ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

Very high
High
Medium
Low
Very low
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Prepare a diagnosis on the use and amounts of phthalates used by national industries

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Conduct population studies of the harmful effects associated with phthalates used in Latin America and the Caribbean
9. Polycyclic Aromatic Hydrocarbons (PAHs)

Screening Question - Polycyclic Aromatic Hydrocarbons (PAHs)

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on Polycyclic Aromatic Hydrocarbons for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Triclosan)*

   ☑ Yes
   ○ No, I do not know enough about this issue
   ○ No, this issue is not relevant to my country or institution
   ○ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on Polycyclic Aromatic Hydrocarbons for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

Polycyclic aromatic hydrocarbons are associated with multiple damages to health, among them, the formation of cancer and mutagenicity, which are already common and increasing pathologies in the countries

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).  

   - [✓] Legally binding
   - [ ] Soft law
   - [✓] Information sharing and awareness/ Voluntary initiatives
   - [ ] No international actions are needed
   - [ ] Other: ______.

   a. Please explain your response, including examples if possible*. ________________
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilisation
- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: __________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Conduct studies to assess the link between disease and exposure to polycyclic aromatic hydrocarbons.

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Increase regional capacities for the analysis of polycyclic aromatic hydrocarbons and the evaluation of their risks to health and the environment.
10. Triclosan

Screening Question - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on Triclosan for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Chemicals in Products (CiP))*

   - ☑ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on Triclosan for more information on the topic.

Please answer the questions below that are relevant to your organization/country/region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

The substance triclosan is widely used in different industries and products, a situation that poses a possible high exposure to the substances, both in the manufacture and use of hygiene and cosmetic products, as well as in other products for commercial and industrial use.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - ✓ Legally binding
   - ☐ Soft law
   - ✓ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible*. __________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to
the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
✓ Options / guidance for economic instruments
✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

✓ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
✓ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Triclosan for more information on the topic. If you select “Other”, please elaborate your response).

✓ Agriculture and food production
☐ Construction
☐ Electronics
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: ____________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Carry out an inventory of products containing triclosan and uses of the substance, including finished products for domestic, commercial and industrial use.

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Conduct population studies of the health effects of exposure to triclosan and its products.
11. Chemicals in products (CiP)

Screening Question - Chemicals in products (CiP)

Chemicals may be released at any stage of a product’s life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, “with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle”. SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on Chemicals in Products for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Endocrine-disrupting chemicals (EDCs))

☐ Yes
☐ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
**Technical Questions - Chemicals in products (CiP)**

Chemicals may be released at any stage of a product’s life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, “with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle”. SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on [Chemicals in Products](#) for more information on the topic.

**Please answer the questions below that are relevant to your organization/ country/ region:**

1. **Do you agree with the assessment report that further international action is necessary?** *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)*
   - ☑ Yes
   - ☐ No
   - ☐ Do not know

   a. Please provide a brief explanation for your response. ________________

   There is a large number of chemical substances and products for which an initiative to regulate their use and prevent exposures and releases is not envisioned.

2. **What types of international actions should be taken?** *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).*
   - ☑ Legally binding
   - ☐ Soft law
   - ☑ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible. ________________
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilisation

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Chemicals in Products for more information on the topic. If you select "Other", please elaborate your response).

- Agriculture and food production
- Construction
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

A new global framework should be considered

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food
☐ Biodiversity
☐ Climate Change
✓ Health
✓ Human Rights
✓ Sustainable Consumption and Production
✓ World of Work
☐ Other: __________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

☐ Very high
☒ High
☐ Medium
9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Not all the information is available to establish cause-effect relationships for the different substances.

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided “to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders” and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on Endocrine Disrupting Chemicals for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Environmentally Persistent Pharmaceutical Pollutants (EPPPs))*

   - ☑ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

b. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Endocrine-disrupting chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided “to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders” and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)
- None, there are no factors preventing action or progress
- Other: ______________

a. Please explain your response, including examples if possible: _____

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? *(Open space answer. Please share a weblink to the initiative(s) if available).*
6. Which sectors/value chains need to be closely involved in developing solutions? *(Multi-choice. Please visit the two-page factsheet on Endocrine Disrupting Chemicals for more information on the topic. If you select "Other", please elaborate your response).*

- ✓ Agriculture and food production
- ☐ Construction
- ✓ Electronics
- ✓ Energy
- ✓ Health
- ✓ Labour
- ✓ Pharmaceuticals
- ☐ Public, private, blended finance
- ☐ Retail
- ✓ Textiles
- ☐ Transportation
- ✓ Waste
- ☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? *(Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).*

A new global framework should be considered

a. Which international agendas have important linkages with this issue of concern? *(Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):*

- ✓ Agriculture and Food
- ☐ Biodiversity
- ☐ Climate Change
- ✓ Health
- ☐ Human Rights
- ☐ Sustainable Consumption and Production
- ☐ World of Work
- ☐ Other: __________

b. Please explain your response, including examples if possible. *(Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):*

8. What priority level do you attach to this issue for international action?

- ☐ Very high
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Carry out an inventory of substances and products that are endocrine disruptors used in the country, which can be prepared from international lists of such substances.

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Establish lists of substances identified as endocrine disruptors, establishing tariff codes and their chemical identification number (CAS). Guarantee that the labels and safety data sheets of the products declare the risks to health and that the globally harmonized system of labeling of chemical products is applied in more countries of Latin America and the Caribbean.
Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution “considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority”, “recognizes the current knowledge gaps on exposure to and the effects of EPPP”, “decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders”, and “requests all interested stakeholders and organizations to provide support, including expertise, financial and in-kind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance”

Please visit the two-page factsheet on Environmentally Persistent Pharmaceutical Pollutants for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Hazardous substances within the life cycle of electrical and electronic products (HSLEEP))

- ☐ Yes
- ☐ No, I do not know enough about this issue
- ☐ No, this issue is not relevant to my country or institution
- ☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. ☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

It would be necessary to establish a new global framework and define surveillance and control criteria

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food
☐ Biodiversity
☐ Climate Change
✓ Health
✓ Human Rights
✓ Sustainable Consumption and Production
☐ World of Work
☐ Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Carry out studies on the effects of substances on the environment and strengthen environmental surveillance and monitoring laboratories (wastewater, water, native species)

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Carry out studies on the impact of EPPP on microorganisms and other species in aquatic systems.
14. Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Screening Question - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels, significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on Hazardous Substances within the Life cycle of Electrical and Electronic Products for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Highly Hazardous Pesticides (HHPs))*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*. __________________

The use of chemical substances in electrical and electronic equipment is extremely extensive and it would be practically impossible to monitor and control the substances incorporated. It must be
addressed through other mechanisms that are easier to apply and can prevent exposures and releases of toxic substances.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures  
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)  
☐ Options / guidance for economic instruments  
✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies)  
☐ Measures supporting science-based knowledge and research  
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity  
☐ Lack of scientific knowledge  
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors  
☐ Difficulty with resource mobilisation  
☐ Lack of economically feasible green and sustainable alternatives  
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?  
☐ None, there are no factors preventing action or progress  
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Hazardous Substances within the Life cycle of Electrical and Electronic Products for more information on the topic. If you select "Other", please elaborate your response).

- Agriculture and food production  
- Construction  
- Electronics  
- Energy  
- Health  
- Labour

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food  
- Biodiversity  
- Climate Change  
- Health  
- Human Rights  
- Sustainable Consumption and Production  
- World of Work  
- Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

No yet

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

No yet
15. Highly hazardous pesticides (HHPs)

Screening Question - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: “Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous”.

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported “concerted action to address HHPs in the context of SAICM” and encouraged “relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises”, and welcomed “the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC”

Please visit the two-page factsheet on Highly Hazardous Pesticides for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Lead in Paint)

☐ Yes
☒ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: “Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous”.

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported “concerted action to address HHPs in the context of SAICM” and encouraged “relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises”, and welcomed “the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC”.

Please visit the two-page factsheet on Highly Hazardous Pesticides for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)
   - ☐ Yes
   - ✗ No
   - ☐ Do not know
   a. Please provide a brief explanation for your response*. __________________

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - ☐ Legally binding
   - ☐ Soft law
   - ☐ Information sharing and awareness/ Voluntary initiatives
   - ✓ No international actions are needed
   - ☐ Other: ______.
Substances identified as most dangerous can be addressed in the Rotterdam and Stockholm Conventions

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilisation
- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- None, there are no factors preventing action or progress
- Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on High Hazardous Pesticides for more information on the topic. If you select "Other", please elaborate your response).

✓ Agriculture and food production  
☐ Construction  
☐ Electronics  
☐ Energy  
✓ Health  
☐ Labour  
☐ Pharmaceuticals  
☐ Public, private, blended finance  
☐ Retail  
☐ Textiles  
☐ Transportation  
✓ Waste  
☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food  
☐ Biodiversity  
☐ Climate Change  
✓ Health  
☐ Human Rights  
✓ Sustainable Consumption and Production  
☐ World of Work  
☐ Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?
   - [ ] Very high
   - [ ] High
   - [ ] Medium
   - [ ] Low
   - [ ] Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

   Not yet

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

    Not yet
16. Lead in paint

Screening Question - Lead in paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through “lead paint”, or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, “Lead in Paint” was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt “legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure” and to have all paint manufacturers eliminate “the use of added lead compounds in priority areas” by 2020.

Please visit the two-page factsheet on Lead in Paint for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Nanotechnology and manufactured nanomaterials)*

   - ☑ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Lead in paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response.

   We have participated in the regional initiative for the regulation of lead in paints. Project coordinated with the support of UNEP

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: _______.
a. Please explain your response, including examples if possible*.
The regional project promoted national regulations, but in order to achieve this type of initiative, an international framework is required to achieve follow-up on commitments.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: _____

a. Please explain your response, including examples if possible:
It could be opportune to have a Central American technical regulation that regulates the maximum permitted concentrations of lead in paints and other materials of daily use that could contain lead.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

✓ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
✓ Difficulty with resource mobilisation
✓ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: _____ Difficulties in making new regulations, especially if they may have economic repercussions for the regulated sector.

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Lead in Paint for more information on the topic. If you select "Other", please elaborate your response).

- Agriculture and food production
- Construction
- Electronics
- Energy
- Health
- Labour
- Pharmaceuticals
- Public, private, blended finance
- Retail
- Textiles
- Transportation
- Waste
- Other: ______ paint factories

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Minamata Convention, for being a neurotoxic substance

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

To start in the near future the national elaboration of a regulatory framework for lead in paints and other products of daily use that contain them.

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

It would be opportune to resume the proposal for the development of a Central American regulatory instrument for lead levels in paint, as was proposed at the closing meeting of the lead in paint project held in Panama. The elaboration of a RTCA (Central American Technical Regulation) was recommended.
17. Nanotechnology and manufactured nanomaterials

*Screening Question - Nanotechnology and manufactured nanomaterials*

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns “Nanotechnology and manufactured nanomaterials” was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

Please visit the two-page factsheet on Nanotechnology and manufactured nanomaterials for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Per- and polyfluoroalkyl substances (PFASs))*

   ☐ Yes

   ☐ No, I do not know enough about this issue

   ☐ No, this issue is not relevant to my country or institution

   ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. 5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Nanotechnology and Manufactured Nanomaterials for more information on the topic. If you select "Other", please elaborate your response).
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high
- High
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
18. Per- and polyfluoroalkyl substances (PFASs)

Screening Question - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF2–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some “long-chain” PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified “managing PFASs and the transition to safer alternatives” as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders “to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible”

Please visit the two-page factsheet on Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the Conclusion page)

☐ Yes
☐ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF2–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some “long-chain” PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified “managing PFASs and the transition to safer alternatives” as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders “to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible”

Please visit the two-page factsheet on Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)*
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*.

   Considering that PFAS have been widely used since their inception in 1940, a binding instrument in force for several decades would have been expected, due to the difficulty of creating new regulatory frameworks in the international arena, which requires terms between 8 to 10 years for its application. Given this situation, it would be opportune to work with these substances with the Conventions on hazardous chemicals that already exist, such as the Rotterdam Convention and the Stockholm Convention, which have been created out of concern for the high risks to health and the atmosphere.

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
☐ Other: ______.

a. Please explain your response, including examples if possible*: ____________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
✓ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
✓ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
✓ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?

✓ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
✓ Difficulty with resource mobilisation
✓ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Per- and polyfluoroalkyl substances (PFASs) for more information on the topic. If you select “Other”, please elaborate your response).

✓ Agriculture and food production  
✓ Construction  
✓ Electronics  
✓ Energy  
✓ Health  
✓ Labour  
✓ Pharmaceuticals  
☐ Public, private, blended finance  
✓ Retail  
✓ Textiles  
☐ Transportation  
✓ Waste  
☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).  

Rotterdam Convention (PIC) and Stockholm Convention (POPs)

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

✓ Agriculture and Food  
✓ Biodiversity  
☐ Climate Change  
✓ Health  
✓ Human Rights  
✓ Sustainable Consumption and Production  
✓ World of Work  
☐ Other: ________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

The Regional Centers of the Stockholm Convention could carry out research and share more information on the subject, the foregoing in attention to the SAICM strategy of disseminating knowledge of risk at all levels.

Conclusion:

Thank you for having reached this point in the form. You are now on the last page. Below are a final set of questions covering all 19 issues of concern.

GCO-II issues:

- Arsenic
- Cadmium
- Glyphosate
- Lead
- Microplastics
- Neonicotinoids
- Organotins
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Triclosan
- Bisphenol A (BPA)

List of SAICM issues:

- Chemicals in products (CiP)
- Endocrine-disrupting chemicals (EDCs)
- Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- Highly hazardous pesticides (HHPs)
- Lead in paint
- Nanotechnology and manufactured nanomaterials
- Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

Please submit your completed form via email by 15/08/2023 COB Central European time (CET).
1. From the list of 19 issues, which issue(s) do you think is/are the most urgent? (Multiple options from the list of 19 issues)

☐ Arsenic
✓ Bisphenol A (BPA)
✓ Cadmium
✓ Glyphosate
✓ Lead
✓ Microplastics
☐ Neonicotinoids
✓ Organotins
☐ Phthalates
✓ Polycyclic Aromatic Hydrocarbons (PAHs)
☐ Triclosan
☐ Chemicals in products (CiP)
✓ Endocrine-disrupting chemicals (EDCs)
☐ Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
☐ Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
☐ Highly hazardous pesticides (HHPs)
☐ Lead in paint
☐ Nanotechnology and manufactured nanomaterials
☐ Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

a. Please explain your response. (Open space to elaborate).

2. From the list of 19 issues, which issue(s) is/are the most actionable? (Multiple options from the list of 19 issues)

☐ Arsenic
☐ Bisphenol A (BPA)
✓ Cadmium
☐ Glyphosate
✓ Lead
✓ Microplastics
☐ Neonicotinoids
☐ Organotins
✓ Phthalates
☐ Polycyclic Aromatic Hydrocarbons (PAHs)
✓ Triclosan
☐ Chemicals in products (CiP)
☐ Endocrine-disrupting chemicals (EDCs)
☐ Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
☐ Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
☐ Highly hazardous pesticides (HHPs)
✓ Lead in paint
☐ Nanotechnology and manufactured nanomaterials
☐ Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

b. Please explain your response. *(Open space to elaborate).*

3. Are there any other observations you wish to note? *(Open space to elaborate).*
