UNEP’s Call for Written Inputs on Issues of Concern: Priorities for further work and potential further international action

Introduction

UNEP is undertaking a consultation on priorities for further work and potential further international action on 19 issues of concern. This call for written inputs is being conducted to gather relevant information from stakeholders and views about the next steps that should be taken on issues of concern.

The call for inputs will address 19 issues of concern and you may wish to only provide answers for issues of concern that are of relevance to your organization/country. At the start of each section, you will be asked whether you would like to provide responses on each specific issue. If you choose “No” on the introduction page of each issue you may proceed to the next issue of concern.

Please be aware that the submitted responses will be made available on the UNEP website indicating the stakeholder affiliation/government. The names and contact details of the respondents will not be published on the UNEP website. Further information on UNEP’s consultation process can be found here.

We highly recommend coordinating responses within your stakeholder affiliation/government. Please complete this form for collecting written inputs by 15/08/2023 COB Central European time (CET).

For those using this MS word version, kindly return the completed word version of the call for written inputs. Please remember to save your work often, due to the addition of ActiveX controls below (such as option buttons and checkboxes), the autosave feature is not available on this form.

Please enter your email details.

Email:

Background

In 2020, UNEP developed an Assessment Report on Issues of Concern, to inform the international community about the current situation of specific chemicals and waste issues. It was based on a review of published evidence. It was intended to support discussion at the fifth session of the UN Environment Assembly (UNEA 5) and other international forums working towards sound management of chemicals and waste. The Assessment Report assessed the ability of existing actions to address current environmental and human exposure to individual chemicals and groups of chemicals. It looked at 11 issues with emerging evidence of risks identified by the Global Chemicals Outlook-II and the 6 Emerging Policy Issues (EPIs) and two other Issues of Concern identified under the Strategic Approach to International Chemicals Management (SAICM). The report concluded that concerted international action by all stakeholders at all levels is urgently required.
### GCO-II Issues

### SAICM Issues

| 1) Chemicals in products (CiP) | 2) Endocrine-disrupting chemicals (EDCs) | 3) Environmentally Persistent Pharmaceutical Pollutants (EPPPs) | 4) Hazardous substances within the life cycle of electrical and electronic products (HSLEEP) | 5) Highly hazardous pesticides (HHPs) | 6) Lead in paint | 7) Nanotechnology and manufactured nanomaterials | 8) Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives |

In March 2022, at UNEA 5.2, UNEP was requested through resolution 5/7 to seek views from Member States and other stakeholders on priorities for further work, building on existing measures and initiatives, and on potential further international action on the issues discussed in the Assessment Report on Issues of Concern. The resolution also requests the preparation of a summary analysis, taking into account the views received.

Through this call for inputs, UNEP intends to respond to UNEA’s request by gathering information from stakeholders about the priorities for future work and potential further international action. The findings from this call for written inputs will inform the writing of the Summary Analysis. The Summary Analysis is expected to build upon the SAICM Survey which considered the 8 EPIs and other issues of concern.

**Available resources to support your responses:**

All 19 issues of concern will be covered in this call for written inputs. A recording from an information webinar held on 27 April 2023, on the Assessment Report on Issues of Concern is available here for your reference. Further background information can be found below:

- Assessment report here>>
- Annexes here>>
- Factsheets on Issues of concern here>>
- Catalogue of International Actions on Chemicals and Waste here>>
- Survey from SAICM Sec on EPIs here>>

The form for submitting written inputs will remain open until 15/08/2023 COB Central European time (CET).

Thank you for your kind support with this consultation.
Personal Information:

Institution/Organization: San Diego State University School of Public Health

Type of Institution: Civil Society and Academia

If relevant, please describe the membership coverage, geographical coverage and area of interest of your institution: ASH is based in the United States but takes action globally as the oldest non-governmental advocacy organization against the tobacco epidemic. There are similarly named groups in several countries. ASH is a part of the Stop Tobacco Pollution Alliance, a coalition of anti-tobacco advocacy groups dedicated to including the plastic cigarette filter as a product of concern for action as part of the UNEP plastics treaty work.

Country: United States
Questions

1. Arsenic

Screening Question - Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth’s crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on Arsenic for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, e.g. Bisphenol A (BPA))

☐ Yes
☐ No, I do not know enough about this issue
☐ No, this issue is not relevant to my country or institution
☐ No, other

a. If you selected “No, other” in the previous question, please elaborate here:

Technical Questions - Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth’s crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on Arsenic for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

☐ Yes
☐ No
☐ Do not know

a. Please provide a brief explanation for your response*: __________________________
2. **What types of international actions should be taken?** *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).*

- [ ] Legally binding
- [ ] Soft law
- [ ] Information sharing and awareness/ Voluntary initiatives
- [ ] No international actions are needed
- [ ] Other: ______.

a. Please explain your response, including examples if possible*: __________________

3. **Which type of approach or measure would you see as appropriate to address this issue at the international level?** *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).*

- [ ] Regulatory control measures
- [ ] Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers))
- [ ] Options / guidance for economic instruments
- [ ] Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- [ ] Measures supporting science-based knowledge and research
- [ ] Other: __________

a. Please explain your response, including examples if possible: ______

4. **What factors prevent action/progress on addressing the issue in your country/ organization** *(Multiple answers based on list below)?*

- [ ] Lack of technical capacity
- [ ] Lack of scientific knowledge
- [ ] Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- [ ] Difficulty with resource mobilisation
- [ ] Lack of economically feasible green and sustainable alternatives
- [ ] Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- [ ] None, there are no factors preventing action or progress
☐ Other: ________________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? *(Open space answer. Please share a weblink to the initiative(s) if available).*

6. Which sectors/value chains need to be closely involved in developing solutions? *(Multi-choice. Please visit the two-page factsheet on Arsenic for more information on the topic. If you select “Other”, please elaborate your response).*

☐ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
☐ Health
☐ Labour
☐ Pharmaceuticals
☐ Public, private, blended finance
☐ Retail
☐ Textiles
☐ Transportation
☐ Waste
☐ Other: ______________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? *(Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).*

a. Which international agendas have important linkages with this issue of concern? *(Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste)*:

☐ Agriculture and Food
☐ Biodiversity
☐ Climate Change
☐ Health
☐ Human Rights
☐ Sustainable Consumption and Production
☐ World of Work
b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?
   - Very high
   - High
   - Medium
   - Low
   - Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
2. Bisphenol A (BPA)

Screening Question - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on Bisphenol-A for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Cadmium)

   ☐ Yes
   ☐ No, I do not know enough about this issue
   ☒ No, this issue is not relevant to my country or institution
   ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

Technical Questions - Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Please visit the two-page factsheet on Bisphenol-A for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)

   ☐ Yes
1. Do you believe that the issue in your country/organization is of international concern?  
   - [ ] Yes
   - [x] No
   - [ ] Do not know

   a. Please provide a brief explanation for your response*. __________________

2. What types of international actions should be taken?  
   (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - [ ] Legally binding
   - [ ] Soft law
   - [ ] Information sharing and awareness/ Voluntary initiatives
   - [ ] No international actions are needed
   - [ ] Other: ______.

   a. Please explain your response, including examples if possible*. __________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level?  
   (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - [ ] Regulatory control measures
   - [ ] Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
   - [ ] Options / guidance for economic instruments
   - [ ] Voluntary measures and approaches: (such as Guidelines, principles and strategies)
   - [ ] Measures supporting science-based knowledge and research
   - [ ] Other: ______

   a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization?  
   (Multiple answers based on list below)
   - [ ] Lack of technical capacity
   - [ ] Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? *(Open space answer. Please share a weblink to the initiative(s) if available).*

6. Which sectors/value chains need to be closely involved in developing solutions? *(Multi-choice. Please visit the two-page factsheet on Bisphenol A for more information on the topic. If you select "Other", please elaborate your response).*
   ☐ Agriculture and food production
   ☐ Construction
   ☐ Electronics
   ☐ Energy
   ☐ Health
   ☐ Labour
   ☐ Pharmaceuticals
   ☐ Public, private, blended finance
   ☐ Retail
   ☐ Textiles
   ☐ Transportation

   a. Which international agendas have important linkages with this issue of concern? *(Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste)*: 

b. Please explain your response, including examples if possible. *(Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):*

8. What priority level do you attach to this issue for international action?

- [ ] Very high
- [ ] High
- [ ] Medium
- [ ] Low
- [ ] Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
3. Cadmium

Screening Question - Cadmium

Cadmium is a toxic metal that is naturally found in the Earth’s crust, generally at low levels. Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure.

Please visit the two-page factsheet on Cadmium for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a “No” option, you may move to the next issue of concern, Glyphosate)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
4. Glyphosate

Screening Question - Glyphosate

Glyphosate is an organophosphorus herbicide for agricultural, forestry and residential weed control that kills or suppresses all plant types, with the exception of those genetically modified to be tolerant to it. Since its introduction in 1974, glyphosate has become the most widely used herbicide worldwide. The largest use of glyphosate has been in agriculture, however glyphosate use in urban settings can also be a significant source of contamination.

Please visit the two-page factsheet on Glyphosate for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Lead)

  - Yes
  - No, I do not know enough about this issue
  - No, this issue is not relevant to my country or institution
  - No, other

a. If you selected "No, other" in the previous question, please elaborate here:

5. Lead

Screening Question - Lead

Lead is a toxic metal that occurs naturally in the Earth’s crust. It may exist in both inorganic and organic forms. The current global uses of lead are in batteries, rolled and extruded products, pigments and other product additives (e.g. for paints, cathode ray tubes, enamels and ceramics, PVC stabilisers), ammunition, alloys, cable sheathing and other uses.

Please visit the two-page factsheet on Lead for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Microplastics)

☑ Yes
☒ No, I do not know enough about this issue
☑ No, this issue is not relevant to my country or institution
☒ No, other

a. If you selected "No, other" in the previous question, please elaborate here:

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).
   a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
      ■ Agriculture and Food
      ■ Biodiversity
      ■ Climate Change
      ■ Health
      ■ Human Rights
      ■ Sustainable Consumption and Production
      ■ World of Work
      ■ Other: ________

   b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?
   ○ Very high
   ○ High
   ○ Medium
   ○ Low
   ○ Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
6. Microplastics

**Screening Question - Microplastics**

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on Microplastics for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Neonicotinoids)*

- ☐ Yes
- ☐ No, I do not know enough about this issue
- ☐ No, this issue is not relevant to my country or institution
- ☐ No, other

  a. If you selected "No, other" in the previous question, please elaborate here:

*Technical Questions - Microplastics*

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on Microplastics for more information on the topic.

**Please answer the questions below that are relevant to your organization/ country/ region:**

1. Do you agree with the assessment report that further international action is necessary*? *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)*
a. Please provide a brief explanation for your response*. Almost all commercial cigarettes have plastic (cellulose acetate) filters attached. These persist as discarded waste products (cigarette butts), which are the most common trash items collected on beach and urban clean-ups globally. More than 5 trillion cigarettes are sold each year globally, and between 1/3 and 2/3 of these end up as discarded waste; collected butts end up in landfills and are a contaminant source as well. The filters have no positive health benefits, as they are simply a marketing gimmick that makes it easier for young people to start smoking and provide a false sense of security for smokers who cannot quit. The filter could be banned as a source of microplastics by prohibiting sales of filtered cigarettes through a binding agreement.

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*.

- Legally binding
- Soft law
- Information sharing and awareness/ Voluntary initiatives
- No international actions are needed
- Other: _______.

a. Please explain your response, including examples if possible*. Given the international trade in tobacco products, a binding international agreement is necessary, including specification that even biodegradable filters are not acceptable substitutes as these still provide chemical environmental toxins from the tobacco product waste and that they would then become yet another marketing gimmick to sell cigarettes and sustain tobacco use. This would counter the public health objective accomplished by banning the plastic filter.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*.

- Regulatory control measures
- Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science-based knowledge and research
- Other: __________
a. Please explain your response, including examples if possible: Other types of tobacco products have been banned by national and subnational jurisdictions. These include flavoured tobacco products, menthol products, e-cigarettes, and smokeless products. Global action to reduce tobacco sales will provide important public health benefits while preventing one of the most extensive waste items from sustained environmental impacts. By banning the filtered cigarette, fewer people will smoke, toss their butts into the environment, and create microplastic trash.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: The global tobacco trade is a major barrier to individual national action. There is persistent misinformation about the harm reduction value of filtered cigarettes, and there are as yet few jurisdictions that have attempted to confront the tobacco industry with the removal of one of the most effective marketing tools they depend upon. The tobacco industry and its partners that manufacture the plastic filters (e.g., Celanese, Kodak, Dow) will provide enormous resistance to such dramatic interventions, but the benefits of such an intervention are likely to be significant.

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? US Food and Drug Administration ban on Juul e-cigarettes and flavoured tobacco products. https://tobaccocontrol.bmj.com/content/31/Suppl_3/s176

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Microplastics for more information on the topic. If you select “Other”, please elaborate your response).

☐ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
✓ Health
☐ Labour
☐ Pharmaceuticals
☐ Public, private, blended finance
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? Multilateral agreements, binding in nature. WHO Framework Convention on Tobacco Control as model.
   a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
      - Agriculture and Food
      - Biodiversity
      - Climate Change
      - Health
      - Human Rights
      - Sustainable Consumption and Production
      - World of Work
      - Other: 

   b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste): Linkage to FCTC

8. What priority level do you attach to this issue for international action?
   - Very high
   - High
   - Medium
   - Low
   - Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available). Additional information regarding lack of health benefit and persistent pollution from filtered cigarettes, whether plastic or biodegradable.

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available). As above
7. Neonicotinoids

Screening Question - Neonicotinoids

Neonicotinoids are a class of neuroactive insecticides chemically related to nicotine. Since the first neonicotinoid (imidacloprid) was commercialized in the 1990s, seven main compounds (acetamiprid, clothianidin, dinotefuran, imidacloprid, nitenpyram, thiamethoxam and thiacloprid) are now available on the global market. Today, neonicotinoids are used in protecting plants, livestock and pets from pest insects, as well as for malaria vector control, i.e., mosquitoes, to protect humans, in more than 100 countries. Neonicotinoids are also used as biocides.

Please visit the two-page factsheet on Neonicotinoids for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Organotins)

○ Yes
○ No, I do not know enough about this issue
○ No, this issue is not relevant to my country or institution
○ No, other

a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Neonicotinoids

- ☐ Sustainable Consumption and Production
- ☐ World of Work
- ☐ Other: ______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- ☐ Very high
- ☐ High
- ☐ Medium
- ☐ Low
- ☐ Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
8. Organotins

Screening Question - Organotins

Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please visit the two-page factsheet on Organotins for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Phthalates)*

- [ ] Yes
- [ ] No, I do not know enough about this issue
- [ ] No, this issue is not relevant to my country or institution
- [ ] No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

9. Phthalates

*Screening Question - Phthalates*

Phthalates are a large family of semi-volatile organic compounds. They are a group of plasticizers with softening and elastic effects, and they are produced in high volumes to be used in products such as vinyl flooring, adhesives, detergents, lubricating oils, automotive plastics, plastic clothing and personal care products. Phthalates accounted for 65 per cent of global consumption of plasticizers in 2017.

Please visit the two-page factsheet on Phthalates for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Polycyclic Aromatic Hydrocarbons (PAHs))*

   - ☐ Yes
   - ☒ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on Polycyclic Aromatic Hydrocarbons for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Triclosan)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please answer the questions below that are relevant to your organization/ country/ region:
1. Do you agree with the assessment report that further international action is necessary*? *(If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)*

- Yes
- No
- Do not know

a. Please provide a brief explanation for your response*. PAHs are found in tobacco product waste as a combustion product of tobacco._

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).*

- ✓ Legally binding
- ☐ Soft law
- ☐ Information sharing and awareness/ Voluntary initiatives
- ☐ No international actions are needed
- ☐ Other: ______.

a. Please explain your response, including examples if possible*. __________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).*

- ✓ Regulatory control measures
- ☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- ☐ Options / guidance for economic instruments
- ☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- ✓ Measures supporting science-based knowledge and research
- ☐ Other: __________

a. Please explain your response, including examples if possible: PAHs are known products of tobacco consumption and could be subject to precautionary principle applications. It is not known whether the extensive volume of tobacco product waste over many
decades has had an effect on human health, but such contamination is not necessary and should be addressed as a larger set of actions against tobacco use globally.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity
✓ Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: The multinational tobacco industry and global tobacco markets inhibit action on this as an environmental issue.

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Polycyclic Aromatic Hydrocarbons for more information on the topic. If you select "Other", please elaborate your response).

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
11. Triclosan
Screening Question - Triclosan

Triclosan is a synthetic, broad-spectrum antibacterial chemical used as an additive in thousands of consumer and medical antibacterial products and plastics. It has been used commercially across the globe since the 1970s. Major global use is in cosmetics and personal care products (68%, particularly deodorants) followed by disinfection and medical use (16%) and lower amounts in paints (8%), and in plastic materials, toys and appliances (8%).

Please visit the two-page factsheet on Triclosan for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Chemicals in Products (CiP))*

   - Yes
   - **No, I do not know enough about this issue**
   - No, this issue is not relevant to my country or institution
   - No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

---

Technical Questions - Triclosan

- ☐ Other: ______.

a. Please explain your response, including examples if possible*. ________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

- ☐ Regulatory control measures
- ☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
- ☐ Options / guidance for economic instruments
- ☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- ☐ Measures supporting science-based knowledge and research
- ☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?
☐ Lack of technical capacity
☐ Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Triclosan for more information on the topic. If you select "Other", please elaborate your response).
   ☐ Agriculture and food production
   ☐ Construction
   ☐ Electronics
   ☐ Energy
   ☐ Health
   ☐ Labour
   ☐ Pharmaceuticals
   ☐ Public, private, blended finance
   ☐ Retail
   ☐ Textiles
   ☐ Transportation
   ☐ Waste
   ☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).
a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: _______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high
- High
- Medium
- Low
- Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
12. Chemicals in products (CiP)

Screening Question - Chemicals in products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, “with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle”. SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on Chemicals in Products for more information on the topic.

1. Entry question: Would you like to provide responses on this issue of concern? (Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Endocrine-disrupting chemicals (EDCs))

- Yes
- No, I do not know enough about this issue
- No, this issue is not relevant to my country or institution
- No, other

a. If you selected "No, other" in the previous question, please elaborate here:

Technical Questions - Chemicals in products (CiP)

Chemicals may be released at any stage of a product’s life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, “with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle”. SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on Chemicals in Products for more information on the topic.
Please answer the questions below that are relevant to your organization/country/region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - [ ] Yes
   - [ ] No
   - [ ] Do not know

   a. Please provide a brief explanation for your response*. There are 7000 chemicals in tobacco and at least 50 of these are carcinogens. Recent research has demonstrated that cigarettes, most of which have the plastic, cellulose acetate filter attached, leach out these toxins, including metals, nicotine, and carcinogens, as environmental contaminants. Reducing tobacco use through product sales regulations will reduce this increasingly recognized environmental pollutant source.

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

   - [ ] Legally binding
   - [ ] Soft law
   - [ ] Information sharing and awareness/ Voluntary initiatives
   - [ ] No international actions are needed
   - [ ] Other: _______

   a. Please explain your response, including examples if possible*. Multinational tobacco trade and industry influence require binding international agreements to reduce their health and environmental impacts.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

   - [ ] Regulatory control measures
   - [ ] Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
   - [ ] Options / guidance for economic instruments
   - [ ] Voluntary measures and approaches: (such as Guidelines, principles and strategies)
   - [ ] Measures supporting science-based knowledge and research
   - [ ] Other: __________
a. Please explain your response, including examples if possible: Tobacco products are harmful to health, but more information is needed as to their environmental harms.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity
✓ Lack of scientific knowledge
✓ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

WHO Framework Convention on Tobacco Control

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Chemicals in Products for more information on the topic. If you select "Other", please elaborate your response).

✓ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
✓ Health
☐ Labour
☐ Pharmaceuticals
☐ Public, private, blended finance
✓ Retail
☐ Textiles
☐ Transportation
☐ Waste
☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g.,
Intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Intergovernmental bodies.

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- ✓ Agriculture and Food
- ☐ Biodiversity
- ☐ Climate Change
- ✓ Health
- ☐ Human Rights
- ☐ Sustainable Consumption and Production
- ☐ World of Work
- ☐ Other: _______

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- ☑ Very high
- ☑ High
- ☑ Medium
- ☑ Low
- ☑ Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

Increase knowledge about lack of value filtered cigarettes and environmental risks of microplastics and toxic chemicals from them.

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available). As above
13. Endocrine-disrupting chemicals (EDCs)

*Screening Question - Endocrine-disrupting chemicals (EDCs)*

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided “to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders” and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on [Endocrine Disrupting Chemicals](#) for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Environmentally Persistent Pharmaceutical Pollutants (EPPPs))*

   - ○ Yes
   - ✗ No, I do not know enough about this issue
   - ○ No, this issue is not relevant to my country or institution
   - ○ No, other

b. If you selected "No, other" in the previous question, please elaborate here:
**Technical Questions - Endocrine-disrupting chemicals (EDCs)**

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided “to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders” and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on Endocrine Disrupting Chemicals for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? *(If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)*
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*. __________________

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to*
the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
☐ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?

☐ Lack of technical capacity
☐ Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Endocrine Disrupting Chemicals for more information on the topic. If you select "Other", please elaborate your response).

☐ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
☐ Health
☐ Labour
☐ Pharmaceuticals
☐ Public, private, blended finance
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).
   a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
      □ Agriculture and Food
      □ Biodiversity
      □ Climate Change
      □ Health
      □ Human Rights
      □ Sustainable Consumption and Production
      □ World of Work
      □ Other: 

   b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?
   - Very high
   - High
   - Medium
   - Low
   - Very low

9. Is there any priority further work you would like to suggest at the national level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).

10. Is there any priority further work you would like to suggest at the regional level*? (Open space to elaborate. Please share a weblink to the suggestion(s) if available).
14. Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Screening Question - Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution “considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority”, “recognizes the current knowledge gaps on exposure to and the effects of EPPP”, “decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders”, and “requests all interested stakeholders and organizations to provide support, including expertise, financial and in-kind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance”

Please visit the two-page factsheet on Environmentally Persistent Pharmaceutical Pollutants for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Hazardous substances within the life cycle of electrical and electronic products (HSLEEP))*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution “considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority”, “recognizes the current knowledge gaps on exposure to and the effects of EPPP”, “decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders”, and “requests all interested stakeholders and organizations to provide support, including expertise, financial and in-kind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance”

Please visit the two-page factsheet on Environmentally Persistent Pharmaceutical Pollutants for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? (If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)
   - ☐ Yes
   - ☐ No
   - ☐ Do not know

   a. Please provide a brief explanation for your response*. __________________

2. What types of international actions should be taken? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

   - ☉ Legally binding
   - ☉ Soft law
   - ☉ Information sharing and awareness/ Voluntary initiatives
   - ☉ No international actions are needed
   - ☉ Other: ______.
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
☐ Measures supporting science-based knowledge and research

☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? *(Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).*

8. What priority level do you attach to this issue for international action?
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
15. Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Screening Question - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels, significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on Hazardous Substances within the Life cycle of Electrical and Electronic Products for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Highly Hazardous Pesticides (HHPs))*

   ☑️ Yes
   ○ No, I do not know enough about this issue
   ○ No, this issue is not relevant to my country or institution
   ○ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:

   Technical Questions - Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)

   Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

   HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels,
significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on Hazardous Substances within the Life cycle of Electrical and Electronic Products for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary? *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)*
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. We are concerned with the waste produced by the use of electronic smoking devices. These include disposable vapes (single use), heat-not-burn tobacco products, reservoir type refillable electronic smoking devices, and pod-type reusable electronic smoking devices. These all contain lithium ion batteries as well as metallic and plastic components and circuitry.

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*
   - ✓ Legally binding
   - ☐ Soft law
   - ☐ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.

   a. Please explain your response, including examples if possible*. Several jurisdictions have banned sales of certain types of electronic smoking devices. Their safety has been called into question with the occurrence of spontaneous explosions and their use in support for smoking cessation is questionable at best. They all contain nicotine and disposed products have been classified as toxic hazardous waste by the US Environmental Protection Agency.

3. Which type of approach or measure would you see as appropriate to address this issue at the international level? *(Multiple answers based on the catalogue of action, Please refer to*
the catalogue of international actions prepared by UNEP for more information on available options).

✓ Regulatory control measures
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
☐ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______
   Regulatory controls have been irregularly applied and rely on consumer’s voluntary management of the disposed products.

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?
   ☐ Lack of technical capacity
   ☐ Lack of scientific knowledge
   ☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
   ✓ Difficulty with resource mobilisation
   ☐ Lack of economically feasible green and sustainable alternatives
   ✓ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
   ☐ None, there are no factors preventing action or progress
   ☐ Other: __________

a. Please explain your response, including examples if possible: Transborder marketing of these devices requires multinational cooperation.

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
   US Environmental Protection Agency has provided guidance to disposal of electronic smoking devices as toxic, hazardous waste.

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Hazardous Substances within the Life cycle of Electrical and Electronic Products for more information on the topic. If you select "Other", please elaborate your response).
   ☐ Agriculture and food production
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

Intergovernmental bodies such as UNEP and WHO.

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: ________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

As above.

8. What priority level do you attach to this issue for international action?

- Very high
- High
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

Review of environmental hazards of electronic smoking devices including fire risk, battery waste, metals, and plastic waste. Nicotine is a characterizing hazardous chemical that is retained in products and can contaminate environments.

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
16. Highly hazardous pesticides (HHPs)

Screening Question - Highly hazardous pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: “Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous”.

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported “concerted action to address HHPs in the context of SAICM” and encouraged “relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises”, and welcomed “the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC”.

Please visit the two-page factsheet on Highly Hazardous Pesticides for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Lead in Paint)*

   - Yes
   - No, I do not know enough about this issue
   - No, this issue is not relevant to my country or institution
   - No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
**Technical Questions - Highly hazardous pesticides (HHPs)**

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: “Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous”.

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported “concerted action to address HHPs in the context of SAICM” and encouraged “relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises”, and welcomed “the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC”.

Please visit the two-page factsheet on Highly Hazardous Pesticides for more information on the topic.

**Please answer the questions below that are relevant to your organization/ country/ region:**

1. **Do you agree with the assessment report that further international action is necessary***? (*If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9*)
   - ○ Yes
   - ○ No
   - ○ Do not know
     
     a. Please provide a brief explanation for your response*. __________________

2. **What types of international actions should be taken?** (*Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*.
   - ☐ Legally binding
   - ☐ Soft law
   - ☐ Information sharing and awareness/ Voluntary initiatives
   - ☐ No international actions are needed
   - ☐ Other: ______.
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures  
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers))  
☐ Options / guidance for economic instruments  
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)  
☐ Measures supporting science-based knowledge and research  
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization? (Multiple answers based on list below)?

☐ Lack of technical capacity  
☐ Lack of scientific knowledge  
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors  
☐ Difficulty with resource mobilisation  
☐ Lack of economically feasible green and sustainable alternatives  
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?  
☐ None, there are no factors preventing action or progress  
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).
6. Which sectors/value chains need to be closely involved in developing solutions? (*Multi-choice. Please visit the two-page factsheet on Highly Hazardous Pesticides for more information on the topic. If you select "Other", please elaborate your response). *

☐ Agriculture and food production
☐ Construction
☐ Electronics
☐ Energy
☐ Health
☐ Labour
☐ Pharmaceuticals
☐ Public, private, blended finance
☐ Retail
☐ Textiles
☐ Transportation
☐ Waste
☐ Other: __________________________

7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (*Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...). *

a. Which international agendas have important linkages with this issue of concern? (*Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste): *

☐ Agriculture and Food
☐ Biodiversity
☐ Climate Change
☐ Health
☐ Human Rights
☐ Sustainable Consumption and Production
☐ World of Work
☐ Other: _______

b. Please explain your response, including examples if possible. (*Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):
8. What priority level do you attach to this issue for international action?
   - Very high
   - High
   - Medium
   - Low
   - Very low

9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
17. Lead in paint

*Screening Question - Lead in paint*

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through “lead paint”, or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, “Lead in Paint” was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt “legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure” and to have all paint manufacturers eliminate “the use of added lead compounds in priority areas” by 2020.

Please visit the two-page factsheet on Lead in Paint for more information on the topic.

1. **Entry question:** Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Nanotechnology and manufactured nanomaterials)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☒ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other” in the previous question, please elaborate here:
Technical Questions - Lead in Paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through “lead paint”, or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, “Lead in Paint” was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt “legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure” and to have all paint manufacturers eliminate “the use of added lead compounds in priority areas” by 2020.

Please visit the two-page factsheet on Lead in Paint for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. Do you agree with the assessment report that further international action is necessary*? *(If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9)
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. ________________

2. What types of international actions should be taken? *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*. ________________
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
☐ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/ organization (Multiple answers based on list below)?

☐ Lack of technical capacity
☐ Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: ______________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Lead in Paint for more information on the topic. If you select "Other", please elaborate your response).
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

- Agriculture and Food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other: __________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

- Very high

☐ Very high
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
18. Nanotechnology and manufactured nanomaterials

Screening Question - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns “Nanotechnology and manufactured nanomaterials” was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

Please visit the two-page factsheet on Nanotechnology and manufactured nanomaterials for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the next issue of concern, Per- and polyfluoroalkyl substances (PFASs))*

   ☐ Yes
   ☐ No, I do not know enough about this issue
   ☑ No, this issue is not relevant to my country or institution
   ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
Technical Questions - Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. - Very high
- High
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*
19. Per- and polyfluoroalkyl substances (PFASs)

Screening Question - Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. –CF₂–) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some “long-chain” PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified “managing PFASs and the transition to safer alternatives” as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders “to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible”

Please visit the two-page factsheet on Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives for more information on the topic.

1. **Entry question**: Would you like to provide responses on this issue of concern? *(Please select only 1 option below. If you select a "No" option, you may move to the Conclusion page)*

   - ☐ Yes
   - ☐ No, I do not know enough about this issue
   - ☐ No, this issue is not relevant to my country or institution
   - ☐ No, other

   a. If you selected "No, other" in the previous question, please elaborate here:
**Technical Questions - Per- and polyfluoroalkyl substances (PFASs)**

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. \(-\text{CF}_2\-\)) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some “long-chain” PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified “managing PFASs and the transition to safer alternatives” as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders “to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible”

Please visit the two-page factsheet on **Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives** for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1. **Do you agree with the assessment report that further international action is necessary?** *(If you select “No”, you are welcome to answer the questions below or you may proceed directly to question 9)*
   - Yes
   - No
   - Do not know

   a. Please provide a brief explanation for your response*. __________________

2. **What types of international actions should be taken?** *(Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options)*
   - Legally binding
   - Soft law
   - Information sharing and awareness/ Voluntary initiatives
   - No international actions are needed
   - Other: ______.

   a. Please explain your response, including examples if possible*. __________________
3. Which type of approach or measure would you see as appropriate to address this issue at the international level? (Multiple answers based on the catalogue of action, Please refer to the catalogue of international actions prepared by UNEP for more information on available options).

☐ Regulatory control measures
☐ Information based and enforcement tools (such as Scientific and technical and guidelines, Guidelines and tools for enforcement, Awareness tools (including of consumers)
☐ Options / guidance for economic instruments
☐ Voluntary measures and approaches: (such as Guidelines, principles and strategies)
☐ Measures supporting science-based knowledge and research
☐ Other: __________

a. Please explain your response, including examples if possible: ______

4. What factors prevent action/progress on addressing the issue in your country/organization (Multiple answers based on list below)?

☐ Lack of technical capacity
☐ Lack of scientific knowledge
☐ Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
☐ Difficulty with resource mobilisation
☐ Lack of economically feasible green and sustainable alternatives
☐ Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
☐ None, there are no factors preventing action or progress
☐ Other: __________

a. Please explain your response, including examples if possible: ______

5. Can you point to existing initiatives that could be replicated or scaled up at the international level? (Open space answer. Please share a weblink to the initiative(s) if available).

6. Which sectors/value chains need to be closely involved in developing solutions? (Multi-choice. Please visit the two-page factsheet on Per- and polyfluoroalkyl substances (PFASs) for more information on the topic. If you select "Other", please elaborate your response).
7. Which international forum or instrument would be best placed to take the lead on international action on this issue? (Open space to elaborate. Please provide specific examples of e.g., intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...).

a. Which international agendas have important linkages with this issue of concern? (Multiple answers based on list below. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

☐ Agriculture and Food
☐ Biodiversity
☐ Climate Change
☐ Health
☐ Human Rights
☐ Sustainable Consumption and Production
☐ World of Work
☐ Other: __________

b. Please explain your response, including examples if possible. (Open space question. For more information, please see the UNEP assessment paper on linkages with other clusters related to chemicals and waste):

8. What priority level do you attach to this issue for international action?

☐ Very high
☐ High
9. Is there any priority further work you would like to suggest at the national level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

10. Is there any priority further work you would like to suggest at the regional level*? *(Open space to elaborate. Please share a weblink to the suggestion(s) if available).*

- [ ] Medium
- [ ] Low
- [ ] Very low
Conclusion:

Thank you for having reached this point in the form. You are now on the last page. Below are a final set of questions covering all 19 issues of concern.

**GCO-II issues:**

- Arsenic
- Cadmium
- Glyphosate
- Lead
- Microplastics
- Neonicotinoids
- Organotins
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Triclosan
- Bisphenol A (BPA)

**List of SAICM issues:**

- Chemicals in products (CiP)
- Endocrine-disrupting chemicals (EDCs)
- Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- Highly hazardous pesticides (HHPs)
- Lead in paint
- Nanotechnology and manufactured nanomaterials
- Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

Please submit your completed form via email by **15/08/2023** COB Central European time (CET).

1. From the list of 19 issues, which issue(s) do you think is/are the most urgent? *(Multiple options from the list of 19 issues)*

- [ ] Arsenic
- [ ] Bisphenol A (BPA)
- [ ] Cadmium
- [ ] Glyphosate
- [x] Lead
- [ ] Microplastics
- [ ] Neonicotinoids
- [ ] Organotins
- [ ] Phthalates
- [ ] Polycyclic Aromatic Hydrocarbons (PAHs)
- [ ] Triclosan
- [x] Chemicals in products (CiP)
- [ ] Endocrine-disrupting chemicals (EDCs)
- [ ] Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- [x] Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- [ ] Highly hazardous pesticides (HHPs)
- [ ] Lead in paint
- [ ] Nanotechnology and manufactured nanomaterials
- [ ] Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

   **a.** Please explain your response. *(Open space to elaborate)*

   Microplastics and the chemicals leached from discarded tobacco products are of main concern and provide low hanging fruit in terms of sales-based restrictions that are now...
being considered by various jurisdictions. Such interventions provide not just environmental mitigation benefits but also significant public health benefits in addressing the cause of extensive chronic disease morbidity and mortality, tobacco use.

2. From the list of 19 issues, which issue(s) is/are the most actionable? (Multiple options from the list of 19 issues)

- Arsenic
- Bisphenol A (BPA)
- Cadmium
- Glyphosate
- Lead
- Microplastics
- Neonicotinoids
- Organotins
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Triclosan
- Chemicals in products (CiP)
- Endocrine-disrupting chemicals (EDCs)
- Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- Highly hazardous pesticides (HHPs)
- Lead in paint
- Nanotechnology and manufactured nanomaterials
- Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

b. Please explain your response. (Open space to elaborate).

Sales prohibitions on certain tobacco products are already in place and can be extended to filters, electronic smoking devices, and the hazardous waste these produce.

3. Are there any other observations you wish to note? (Open space to elaborate).
