

NbS Examples Submitted by Marine Ecosystems and Protected Areas (MEPA) to the Intergovernmental Consultations on Nature-based Solutions

Using sunlight to dry seasonally abundant products to minimise waste and provide nutrition throughout the year. But these small pilot community-led projects need financing to build capacity to be amplified and scaled up to go through the whole value cycle. These small-scale NbS are sustainable because they come from the people rather than being imposed on them, and because the communities enjoy the results/products, they become embedded as a way of life, rather than a finite project which ends when funding stops.
