Institutional arrangements for Stockholm Convention reporting

- Existence/non-existence
- Linked with NIP development, update and implementation arrangements or not
- Challenges?

Yes, there are institutional arrangements.

Arrangements have been established, since the preparation and updating of the NIP.

As a challenge, it is expected to continue or improve communication with the different institutions that provide information.

Information and data collection for Stockholm Convention reporting

- Data sources used: NIP? Others?
- Data collection systems in place or not
- QA & QC in place or not
- Challenges?

The information generated by the NIP is the main source used for reporting.

The system with which we count for national data collection is the Pollutant Release and Transfer Registry (PRTR)

there is no quality assurance system or quality control

Challenges

Create databases of information and quality systems

Use of Stockholm Convention Electronic Reporting System and reporting formats

- Electronic Reporting System and reporting formats used or not
- Challenges?

The electronic reporting system and reporting formats are used.

Challenge

Easy to use, however it is extensive and requires specific information

Challenges summary

- It is expected to continue or improve communication with the different institutions that provide information.
- Create database and quality systems
- Easy to use, however it is extensive and requires specific information

Thank you
