Foreword

Residue data on several contaminants (organochlorine pesticides, PCBs, lead, cadmium, and aflatoxins) in selected foods were collected from designated Collaborating Centres in twenty countries during a preliminary or development phase of this contaminant monitoring programme. These data are given in this document for each Collaborating Centre according to the contaminant analyzed in the food selected.

The data include that submitted in the initial stage of the programme which was reviewed in the Summary Report⁽¹⁾. However corrections and additions subsequently have been made to these data by some of the Collaborating Centres thus the data given in this document should be considered as final.

The figures given for the detection limit, median, and 90th percentile are in milligrams per kilogram (mg/kg) except when the figure is followed by 'UG' which then indicates micrograms per kilogram ($\mu\text{g}/\text{kg}$). Some data on contaminants in human milk were reported as micrograms per millilitre ($\mu\text{g}/\text{ml}$) but these have been included as if reported on a weight basis; all data on human milk have been reported on an 'as is' basis except for the data received from Austria, Federal Republic of Germany, and Mexico which are on a 'fat-content' basis.

The data on lead were reported as mean and maximum values in the initial collection of data and were given as such in the tables in the Summary Report⁽¹⁾; subsequent data on lead however were reported as median and 90th percentile values. Both of these sets of data are given in this document under the columns headed median and 90th percentile but the figures which are the mean and maximum values are preceded by an asterisk(*) .

The figures which are given as the median and 90th percentile values and which are the same as the detection limit indicate that the values were submitted with (i) a < sign, (ii) N.D. (not detected), (iii) a zero, or (iv) left blank.

An assessment and review of the data received in the first stages of data collection, 1977-1979, have been made⁽²⁾.
