

Regions4 welcomes the consultation for the background document “Strengthening Actions for Nature to Achieve the Sustainable Development Goals.”

We wish to express our support to the proposed action areas. In particular, we believe the “Proposed action area 3: Nature for Climate” should be further explored, including additional examples of potential actions in Box 3. We suggest to include an example focused on adaptation through the nature that is the core of the document:

*Enhance adaptation efforts through nature.* Increase engagement, planning and implementation of adaptation actions through nature (for example, water resources and management; forestry, protected areas, and biodiversity; agriculture and zootechnics).
