

Written Consultation Submission: Shenzhen Zero Waste

Call for Written Inputs on Issues of Concern: Priorities for further work and potential further international action

UNEP is undertaking a consultation on priorities for further work and potential further international on action on 19 Issues of concern. This call for written inputs is being conducted to gather relevant information from stakeholders and views about the next steps that should be taken on issues of concern.

The call for inputs will address 19 issues of concern and you may wish to only provide answers for issues of concern that are of relevance to your organization/ country. At the start of each section, you will be asked whether you would like to provide responses on each specific issue. If you choose “No” on the introduction page of each issue you will be taken on to the next issue of concern.

Please be aware that the submitted responses will be made available on the UNEP website indicating the stakeholder affiliation/ government. The names and contact details of the respondents will not be published on the UNEP website. Further information on UNEPs consultation process can be [found here](#).

After completing the form and clicking “*submit*”, your responses will be saved. An email will be sent to the email address you register below with a summary of your responses and a link to edit your submitted form. **It is therefore possible to return and edit your responses before the deadline by clicking “*submit*” again at the end of the same form.**

We highly recommend coordinating responses within your stakeholder affiliation/ government. The form for collecting written inputs will be available until **15/08/2023** COB

Central European time (CET) .

Please enter your email details below to be notified once your form is submitted and to receive the URL to revisit and edit your form.

Background

In 2020, UNEP developed an [Assessment Report on Issues of Concern](#), to inform the international community about the current situation of specific chemicals and waste issues. It was based on a review of published evidence. It was intended to support discussion at the fifth session of the UN Environment Assembly (UNEA 5) and other international forums working towards sound management of chemicals and waste. The Assessment Report assessed the ability of existing actions to address current environmental and human exposure to individual chemicals and groups of chemicals. It looked at 11 issues with emerging evidence of risks identified by the Global Chemicals Outlook-II and the 6 Emerging Policy Issues (EPIs) and two other Issues of Concern identified under the Strategic Approach to International Chemicals Management (SAICM). The report concluded that concerted international action by all stakeholders at all levels is urgently required.

GCO-II issues

1. [Arsenic](#)
2. [Bisphenol A \(BPA\)](#)
3. [Cadmium](#)
4. [Glyphosate](#)
5. [Lead](#)
6. [Microplastics](#)
7. [Neonicotinoids](#)
8. [Organotins](#)
9. [Phthalates](#)
10. [Polycyclic Aromatic Hydrocarbons \(PAHs\)](#)
11. [Triclosan](#)

SAICM issues

1. [Chemicals in products \(CiP\)](#)
2. [Endocrine-disrupting chemicals \(EDCs\)](#)
3. [Environmentally Persistent Pharmaceutical Pollutants \(EPPPs\)](#)
4. [Hazardous substances within the life cycle of electrical and electronic products \(HSLEEP\)](#)
5. [Highly hazardous pesticides \(HHPs\)](#)
6. [Lead in paint](#)
7. [Nanotechnology and manufactured nanomaterials](#)
8. [Per- and polyfluoroalkyl substances \(PFASs\) and the transition to safer alternatives](#)

In March 2022, at UNEA 5.2, UNEP was requested through [resolution 5/7](#) to seek views from Member States and other stakeholders on priorities for further work, building on existing measures and initiatives, and on potential further international action on the issues discussed in the Assessment Report on Issues of Concern. The resolution also requests the preparation of a summary analysis, taking into account the views received.

Through this call for inputs, UNEP intends to respond to UNEA's request by gathering information from stakeholders about the priorities for future work and potential further international action. The findings from this call for written inputs will inform the writing of the Summary Analysis. The Summary Analysis is expected to build upon the [SAICM Survey](#) which considered the 8 EPIs and other issues of concern.

Available resources to support your responses

All 19 issues of concern will be covered in this call for written inputs. A recording from an information webinar held on 27 April 2023, on the Assessment Report on Issues of Concern is [available here](#) for your reference. Further background information can be found below:

- Assessment report [here>>](#)
- Annexes [here>>](#)
- Factsheets on Issues of concern [here>>](#)
- Catalogue of International Actions on Chemicals and Waste [here>>](#)
- Survey from SAICM Sec on EPIs [here>>](#)

The form for submitting written inputs will remain open until **15/08/2023** COB

Central European time (CET).

Thank you for your kind support with this consultation.

Personal Information

Institution/Organization *

Shenzhen Zero Waste

Type of Institution *

- Government
- Intergovernmental Organization
- Civil Society Organization
- Business/Private Sector
- Academia
- Other:

If relevant, please describe the membership coverage, geographical coverage and area of interest of your institution.

Country *

China

Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on [Arsenic](#) for more information on the topic.

Would you like to provide responses on Arsenic? *

If you select a "No" option, you will be taken to the next issue of concern, Bisphenol A (BPA).

Yes

No, I do not know enough about Arsenic

No, Arsenic is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

Please answer as many questions below as you can on Arsenic

Arsenic is a naturally occurring metalloid that is ubiquitous in the Earth's crust. It is present in various inorganic and organic forms. Arsenic and arsenic compounds are used intentionally in wood preservatives, pesticides, animal feed additives, pharmaceuticals, glass production, alloy manufacturing, electronics, and semiconductor manufacturing.

Please visit the two-page factsheet on [Arsenic](#) for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

1. we still need more research on the toxicity of organic arsenic compounds. international trade of arsenic-polluted products has been an issue which is a transboundary movement of hazardous chemicals that needs international efforts.

.....

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed
- Other:

2a) Please explain your response, including examples if possible.

3) Which type of approach or measure would you see as appropriate to address Arsenic at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research
- Other:

3a) Please explain your response, including examples if possible.

4) What factors prevent action/progress on addressing Arsenic in your country/ organization?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilization
- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- None, there are no factors preventing action or progress
- Other: the penalty mechanism

4a) Please explain your response, including examples if possible.

Secondary contamination from improper ecological restorations by private sectors has become an emerging issue in China after arsenic pollution by industrial activities has been regulated. For food with arsenic residuals, the current penalty is focused on the retailers in the agricultural sectors but they are also environmental vulnerable people with limited knowledge on toxic.

5) Can you point to existing initiatives that could be replicated or scaled up at the international level?

Please share a weblink to the suggestion(s) if available.

.....

6) Which sectors/value chains need to be closely involved in developing solutions?

Please visit the two-page factsheet on [Arsenic](#) for more information on the topic. If you select "Other", please elaborate your response.

Agriculture and Food Production

Construction

Electronics

Energy

Health

Labour

Pharmaceuticals

Public, private or blended finance

Retail

Textiles

Transportation

Waste

Other:

7) Which international forum or instrument would be best placed to take the lead on international action on Arsenic?

Please provide specific examples of e.g., Intergovernmental bodies, multilateral agreements within or outside the chemicals and waste cluster, international instruments...

Basel convention
.....

7a) Which international agendas have important linkages with Arsenic?

For more information, please see the [UNEP assessment paper on linkages with other clusters related to chemicals and waste](#)

- Agriculture and food
- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of work
- Other:

7b) Please elaborate on the important linkages with Arsenic, including examples if possible.

For more information, please see the [UNEP assessment paper on linkages with other clusters related to chemicals and waste](#)

.....

8) What priority level do you attach to Arsenic for international action?

- Very high
- High
- Medium
- Low
- Very low

9) Is there any priority further work you would like to suggest at the national level? *

Please share a weblink to the suggestion(s) if available.

The state should use stricter standards for the issuance of ecological restoration qualifications

10) Is there any priority further work you would like to suggest at the regional level? *

Please share a weblink to the suggestion(s) if available.

Basel convention regional center should actively promote regional communication and knowledge sharing on arsenic management domestic/bilateral/multilateral best practices

Please select one of the options below *

Proceed to the next issue of concern - Bisphenol A (BPA)

Proceed to the "Conclusion" section to submit form and save responses

Bisphenol A (BPA)

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on [Bisphenol-A](#) for more information on the topic.

Would you like to provide responses on Bisphenol A? *

If you select a "No" option, you will be taken to the next issue of concern, Cadmium.

Yes

No, I do not know enough about Bisphenol A

No, Bisphenol A is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

Please answer as many questions below as you can on Bisphenol A

Bisphenols are a group of dozens of organic compounds that have been used as building blocks in the production of polycarbonate plastics, epoxy resins and other products since the 1960s. The variety of products include water bottles, sports equipment, medical devices, household electronics, thermal paper receipts, and food and beverage cans.

Among the bisphenols, bisphenol A (BPA) has attracted the most attention. The consumption of BPA and related products is widespread and estimated to continue to grow in the foreseeable future, driven mainly by increasing demand for polycarbonates and other plastics.

Please visit the two-page factsheet on [Bisphenol A](#) for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

academia and think tanks should devote more efforts

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed
- Other:

2a) Please explain your response, including examples if possible.

There is a significant amount of research on the toxicity of BPA and the necessity for global actions. However, as a common additive in plastics, the process of phasing out BPAs requires further research into their substitutes. Current actions like using BPFs or BPSs as alternatives don't seem as environmental sound management.

3) Which type of approach or measure would you see as appropriate to address Bisphenol A at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research
- Other:

3a) Please explain your response, including examples if possible.

4) What factors prevent action/progress on addressing Bisphenol A in your country/organization?

Lack of technical capacity

Lack of scientific knowledge

Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors

Difficulty with resource mobilization

Lack of economically feasible green and sustainable alternatives

Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

None, there are no factors preventing action or progress

Other:

4a) Please explain your response, including examples if possible.

The prerequisite for phasing out BPA is the availability of environmentally and human-friendly alternatives. The characteristics of plastics dictate that only when additives with similar functionalities to BPA emerge can BPA be eliminated from plastic products. After BPAs have been addressed as an issue of concern, the replacement of BPAs into BPFs or BPSs has caused similar chemical structures and impacts toward human bodies.

.....

5) Can you point to existing initiatives that could be replicated or scaled up at the international level?

Please share a weblink to the suggestion(s) if available.

The widespread adoption of electronic payments and electronic receipts in China (at least in economically developed cities on the east coast) has reduced the consumption of thermal paper, thus safeguarding the health of cashiers and consumers.

.....

6) Which sectors/value chains need to be closely involved in developing solutions?

Please visit the two-page factsheet on [Bisphenol A](#) for more information on the topic. If you select "Other", please elaborate your response.

Agriculture and food production

Construction

Electronics

Energy

Health

Labour

- Biodiversity
- Climate Change
- Health
- Human Rights
- Sustainable Consumption and Production
- World of Work
- Other:

7b) Please elaborate on the important linkages with Bisphenol A, including examples if possible.

For more information, please see the [UNEP assessment paper on linkages with other clusters related to chemicals and waste](#)

Bisphenol A in maternal and infant products poses a threat to the health of both mothers and infants. Moreover, the release of Bisphenol A during the recycling process of these products poses a threat to the rights and well-being of recycling workers, particularly workers in the informal sector in global south countries where this issue is more prevalent.

.....

8) What priority level do you attach to Bisphenol A for international action?

- Very high
- High
- Medium
- Low
- Very low

9) Is there any priority further work you would like to suggest at the national level? *

Please share a weblink to the suggestion(s) if available.

Impose stricter limits or even ban the use of BPA in specific sectors. Further promotion of electronic invoicing is encouraged.

10) Is there any priority further work you would like to suggest at the regional level? *

Please share a weblink to the suggestion(s) if available.

academia research on safer alternatives

Please select one of the options below *

- Proceed to the next issue of concern - Cadmium
- Proceed to the "Conclusion" section to submit form and save responses

Cadmium

Cadmium is a toxic metal that is naturally found in the Earth's crust, generally at low levels. Cadmium and cadmium compounds are mainly used in nickel-cadmium batteries, alloys, coatings and plating, pigments in plastics, glasses, ceramics and paints, solar cells, PVC stabilisers and others. It has been produced, used and released in large quantities, and thus intentional human uses have caused widespread, persistent contamination and exposure.

Please visit the two-page factsheet on [Cadmium](#) for more information on the topic.

Would you like to provide responses on Cadmium? *

If you select a "No" option, you will be taken to the next issue of concern, Glyphosate.

Yes

No, I do not know enough about Cadmium

No, Cadmium is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

8) What priority level do you attach to Lead for international action?

- Very high
- High
- Medium
- Low
- Very low

9) Is there any priority further work you would like to suggest at the national level? *

Please share a weblink to the suggestion(s) if available.

public awareness-raising

10) Is there any priority further work you would like to suggest at the regional level? *

Please share a weblink to the suggestion(s) if available.

N/A

Please select one of the options below *

- Proceed to the next issue of concern - Microplastics
- Proceed to the "Conclusion" section to submit form and save responses

Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on [Microplastics](#) for more information on the topic.

Would you like to provide responses on Microplastics? *

If you select a "No" option, you will be taken to the next issue of concern, Neonicotinoids.

Yes

No, I do not know enough about Microplastics

No, Microplastics are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

Please answer as many questions below as you can on Microplastics

Microplastics are solid particles made of synthetic polymers, typically defined as smaller than 5 mm. Microplastics have been intentionally added to a wide range of products and application areas for diverse technical functions. For example, they are added in cosmetics and personal care products, detergents and maintenance products, agriculture and horticulture, medical devices and in vitro

diagnostic medical devices, medicinal products for human and veterinary use, food supplements, paints, coatings and inks, oil and gas drilling and production, plastics, technical ceramics, media for abrasive blasting, adhesives, 3D printing materials and printing inks.

Please visit the two-page factsheet on [Microplastics](#) for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

Microplastic pollution is an international issue, and due to power imbalances, different countries and regions are affected differently. Additionally, microplastics can undergo cross-border transfer, necessitating international cooperation.

.....

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed
- Other:

2a) Please explain your response, including examples if possible.

.....

3) Which type of approach or measure would you see as appropriate to address Microplastics at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research
- Other:

3a) Please explain your response, including examples if possible.

.....

4) What factors prevent action/progress on addressing Microplastics in your country/ organization?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilization
- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- None, there are no factors preventing action or progress
- Other: western-centric perspective on microplastic regulation

4a) Please explain your response, including examples if possible.

The analysis of microplastics in the UNEP report mainly focuses on microplastics added to products. However, for global south countries with lower consumption levels, a significant issue arises from the improper storage of plastic resins during the production process. Additionally, large quantities of microplastics generated during the recycling of waste plastics (often conducted through informal means) are overlooked by microplastic management centered in a western-centric perspective.

5) Can you point to existing initiatives that could be replicated or scaled up at the international level?

Please share a weblink to the suggestion(s) if available.

.....

6) Which sectors/value chains need to be closely involved in developing solutions?

Please visit the two-page factsheet on [Microplastics](#) for more information on the topic. If you select "Other", please elaborate your response.

7b) Please elaborate on the important linkages with Microplastics, including examples if possible.

For more information, please see the [UNEP assessment paper on linkages with other clusters related to chemicals and waste](#)

.....

8) What priority level do you attach to Microplastics for international action?

- Very high
- High
- Medium
- Low
- Very low

9) Is there any priority further work you would like to suggest at the national level? *

Please share a weblink to the suggestion(s) if available.

Adopt a more cautious approach towards biodegradable plastics. Currently, biodegradable plastics are considered an alternative to conventional plastics. However, due to their ease of degradation, if existing facilities cannot guarantee 100% degradation of biodegradable plastics, it may result in the generation of more microplastics.

10) Is there any priority further work you would like to suggest at the regional level? *

Please share a weblink to the suggestion(s) if available.

more regional cooperation among global south and north countries

Please select one of the options below *

- Proceed to the next issue of concern - Neonicotinoids
- Proceed to the "Conclusion" section to submit form and save responses

Neonicotinoids

Neonicotinoids are a class of neuroactive insecticides chemically related to nicotine. Since the first neonicotinoid (imidacloprid) was commercialized in the 1990s, seven main compounds (acetamiprid, clothianidin, dinotefuran, imidacloprid, nitenpyram, thiamethoxam and thiacloprid) are now available on the global market. Today, neonicotinoids are used in protecting plants, livestock and pets from pest insects, as well as for malaria vector control, i.e., mosquitos, to protect humans, in more than 100 countries. Neonicotinoids are also used as biocides.

Please visit the two-page factsheet on [Neonicotinoids](#) for more information on the topic.

Would you like to provide responses on Neonicotinoids? *

If you select a "No" option, you will be taken to the next issue of concern, Organotins.

Yes

No, I do not know enough about Neonicotinoids

No, Neonicotinoids are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

- Proceed to the next issue of concern - Organotins
- Proceed to the "Conclusion" section to submit form and save responses

Organotins

Organotins are organic compounds that contain at least one tin-carbon bond. There are four main groups of organotin compounds, which are used in various applications. Mono- and di-organotins are mainly used as heat stabilisers in polyvinyl chloride (PVC) in a wide range of applications, including window frames and house siding, PVC pipes, food contact blister packs and water bottles. Tri-organotins are mainly used as biocides (e.g. in wood preservatives, in anti-fouling paints for boats and in textiles) and as pesticides. Tetra-organotins have been used as intermediates in the preparation of other organotins and as oil stabilisers.

Please visit the two-page factsheet on [Organotins](#) for more information on the topic.

Proceed to the next issue of concern - Polycyclic Aromatic Hydrocarbons (PAHs)

Proceed to the "Conclusion" section to submit form and save responses

Polycyclic Aromatic Hydrocarbons (PAHs)

Polycyclic aromatic hydrocarbons (PAHs) are a class of more than 100 organic compounds. They occur naturally in coal and crude oil, but are also formed as a by-product during the incomplete combustion from both natural (e.g. volcanic eruptions, burning of coal, oil and gas) or anthropogenic (e.g. vehicle emissions, industrial processes, food preparation) sources. PAHs may also be present in consumer products (e.g. plastic components, footwear); however, they are never intentionally added during manufacturing. Plant-based foods may contain PAHs as a result of pollutant deposition before harvest.

Please visit the two-page factsheet on [Polycyclic Aromatic Hydrocarbons](#) for more information on the topic.

Would you like to provide responses on Polycyclic aromatic hydrocarbons (PAHs)? *

If you select a "No" option, you will be taken to the next issue of concern, Triclosan.

Yes

No, I do not know enough about PAHs

No, PAHs are not relevant to my country or institution

Please select one of the options below *

- Proceed to the next issue of concern - Chemicals in Products (CiP)
- Proceed to the "Conclusion" section to submit form and save responses

Chemicals in Products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, "with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle". SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Please visit the two-page factsheet on [Chemicals in Products](#) for more information on the topic.

Would you like to provide responses on Chemicals in Products (CiP)? *

If you select a "No" option, you will be taken to the next issue of concern, Endocrine Disrupting Chemicals (EDCs).

Yes

No, I do not know enough about CiP

No, CiP is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

Please answer as many questions below as you can on Chemicals in Products (CiP)

Chemicals may be released at any stage of a product's life cycle (including production, use, recycling or reuse, end-of-life disposal), resulting in potential exposures for humans and the environment. Information exchange in the value chain is fundamental for manufacturers, brands, retailers, end-consumers, waste managers and regulators in identifying and soundly managing any chemicals of

technical, environmental or human health concerns in products.

CiP was identified as an issue of concern under SAICM at ICCM2 in 2009, “with a view of taking appropriate cooperative actions, to consider the need to improve the availability of and access to information on chemicals in products in the supply chain and throughout their life cycle”. SAICM stakeholders also identified four priority sectors: textiles, toys, building products and electronics.

Proceed to the next issue of concern - Endocrine Disrupting Chemicals (EDCs)

Proceed to the "Conclusion" section to submit form and save responses

Endocrine Disrupting Chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided "to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders" and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please visit the two-page factsheet on [Endocrine Disrupting Chemicals](#) for more information on the topic.

Would you like to provide responses on Endocrine Disrupting Chemicals (EDCs)? *

If you select a "No" option, you will be taken to the next issue of concern, Environmentally Persistent Pharmaceutical Pollutants (EPPPs).

Yes

No, I do not know enough about EDCs

No, EDCs are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

Please answer questions as many questions below on as you can on Endocrine Disrupting Chemicals (EDCs)

An EDC is an exogenous substance or mixture that alters the function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations. Substantial efforts have been made over the past two decades to develop a better scientific

understanding of EDCs and their characteristics, to test and identify EDCs, and to develop scientific approaches in order to support risk management measures.

In 2012, at ICCM3, EDCs were identified as an issue of concern under SAICM, and SAICM stakeholders decided “to implement cooperative actions on endocrine-disrupting chemicals with the overall objective of increasing awareness and understanding among policymakers and other stakeholders” and invited IOMC organisations to lead and facilitate a series of cooperative actions on EDCs, which was renewed in a Resolution at ICCM4.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

Many issues of concern in this survey are EDCs. Currently, there's no global consensus on what EDC is. To better manage EDCs, we first need to have a global definition on what EDC is.

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed

Other: international instrument

2a) Please explain your response, including examples if possible.

EDC's environmental impact and health impact have been addressed and more countries are taking actions into that. We need a universal convention so that countries could reach a consensus on what is EDC and what actions should we take.

3) Which type of approach or measure would you see as appropriate to address EDCs at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research

Other: _____

3a) Please explain your response, including examples if possible.

.....

standard

Please select one of the options below *

- Proceed to the next issue of concern - Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Proceed to the "Conclusion" section to submit form and save responses

Environmentally Persistent Pharmaceutical Pollutants (EPPPs)

Pharmaceuticals, including antibiotics, and their metabolites can enter the environment through a variety of pathways, including wastewater and solid waste from pharmaceutical manufacturing, consumption and excretion, improper disposal of unused or expired products, animal husbandry and aquafarming. Their presence in the environment may result in different adverse effects on wildlife and ecosystems; some well-known cases include endangerment of some vulture species, reproductive failures in fish, and the development of antimicrobial resistance.

Internationally, EPPPs were recognized as an issue of concern under SAICM at ICCM4 in 2015. The same resolution "considers that information dissemination and awareness-raising on EPPP are particularly relevant and that improving the availability of and access to information on such chemicals is a priority", "recognizes the current knowledge gaps on exposure to and the effects of EPPP", "decides to implement cooperative actions on EPPP with the overall objective of increasing awareness and understanding among policymakers and other stakeholders", and "requests all interested stakeholders and organizations to provide support, including expertise, financial and in-kind resources, on a voluntary basis, for such cooperative action, including by participating in developing and making available relevant information and guidance"

Please visit the two-page factsheet on [Environmentally Persistent Pharmaceutical Pollutants](#) for more information on the topic.

Would you like to provide responses on Environmentally Persistent Pharmaceutical Pollutants (EPPPs)? *

If you select a "No" option, you will be taken to the next issue of concern, Hazardous Substances within the Life cycle of Electrical and Electronic Products (HSLEEP).

Yes

No, I do not know enough about EPPPs

No, EPPPs are not relevant to my country or institution

No, other

Please share a weblink to the suggestion(s) if available.

NA

Please select one of the options below *

- Proceed to the next issue of concern - Hazardous Substances within the Life cycle of Electrical and Electronic Products (HSLEEP)
- Proceed to the "Conclusion" section to submit form and save responses

Hazardous Substances within the Life cycle of Electrical and Electronic Products (HSLEEP)

Electrical and electronic products (EEP), also referred to as electronic and electrical equipment (EEE), include any device with a circuit, battery or plug. They can contain many chemical additives for certain properties such as flame retardancy. Some chemical additives may be hazardous, including heavy metals and persistent organic pollutants (POPs), and may be released during production, use, transport, and end-of-life treatment (disposal or recycling), leading to environmental and human exposures and possible adverse effects.

HSLEEP was adopted as an EPI at ICCM2 in 2009. Conscious that actions are needed up-, mid- and downstream, a life cycle approach was endorsed. Despite valuable efforts made at all levels, significant challenges remain in regard to identifying, disseminating and implementing best practices at all stages of the life cycle, including design, recycling and disposal.

Please visit the two-page factsheet on [Hazardous Substances within the Life cycle of Electrical and Electronic Products](#) for more information on the topic.

Would you like to provide responses on Hazardous Substances within the Life cycle of Electrical and Electronic Products (HSLEEP)? *

If you select a "No" option, you will be taken to the next issue of concern, Highly Hazardous Pesticides (HHPs).

Yes

No, I do not know enough about HSLEEP

No, HSLEEP is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

Please select one of the options below *

- Proceed to the next issue of concern - Highly Hazardous Pesticides (HHPs)
- Proceed to the "Conclusion" section to submit form and save responses

Highly Hazardous Pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous".

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported "concerted action to address HHPs in the context of SAICM" and encouraged "relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises", and welcomed "the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC"

Please visit the two-page factsheet on [Highly Hazardous Pesticides](#) for more information on the topic.

Would you like to provide responses on Highly Hazardous Pesticides (HHPs)? *

If you select a "No" option, you will be taken to the next issue of concern, Lead in Paint.

Yes

No, I do not know enough about HHPs

No, HHPs are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

Please answer questions as many questions below on as you can on Highly Hazardous Pesticides (HHPs)

The FAO and WHO International Code of Conduct on Pesticide Management defines HHPs as: "Pesticides that are acknowledged to present particularly high levels of acute or chronic hazards to health or environment according to internationally accepted classification systems such as the WHO or the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) or their listing in

relevant binding international agreements or conventions. In addition, pesticides that appear to cause severe or irreversible harm to health or the environment under conditions of use in a country may be considered to be and treated as highly hazardous”.

At ICCM4 in 2015, HHPs were identified as an issue of concern. In addition, among other actions, governments and other stakeholders supported “concerted action to address HHPs in the context of SAICM” and encouraged “relevant stakeholders to undertake concerted efforts to implement the strategy at the local, national, regional and international levels, with emphasis on promoting agroecologically-based alternatives and strengthening national regulatory capacity to conduct risk assessment and risk management, including the availability of necessary information, mindful of the responsibility of national and multinational enterprises”, and welcomed “the offer of the FAO, UNEP and WHO to develop modalities for international coordination in the context of the IOMC”

- Proceed to the next issue of concern - Lead in Paint
- Proceed to the "Conclusion" section to submit form and save responses

Lead in Paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is through "lead paint", or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, "Lead in Paint" was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt "legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure" and to have all paint manufacturers eliminate "the use of added lead compounds in priority areas" by 2020.

Please visit the two-page factsheet on [Lead in Paint](#) for more information on the topic.

Would you like to provide responses on Lead in Paint? *

If you select a "No" option, you will be taken to the next issue of concern, Nanotechnology and manufactured nanomaterials.

Yes

No, I do not know enough about the Lead in Paint

No, Lead in Paint is not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

Please answer questions as many questions below on as you can Lead in Paint

Lead is a multi-system toxicant for which no safe level of exposure has been identified. Exposure to lead can cause chronic and debilitating health impacts in all age groups, and children are particularly vulnerable to its neurotoxic effects. The widespread use of lead has caused extensive environmental and human exposure across the globe. One major source of exposure, particularly for children, is

through “lead paint”, or paint to which lead compounds have been added as pigments, drying agents or anti-corrosives.

Among others, “Lead in Paint” was recognized as an issue of concern under the second session of the International Conference on Chemicals Management (ICCM2) in 2009. The ICCM2 also endorsed the establishment of an international partnership, the Global Alliance to Eliminate Lead Paint (GAELP), to assist in phasing out lead paint worldwide. The GAELP aims to have all countries adopt “legally binding laws, regulations, standards and/or procedures to control the production, import, sale and use of lead paints with special attention to the elimination of lead decorative paints and lead paints for other applications most likely to contribute to childhood lead exposure” and to have all paint manufacturers eliminate “the use of added lead compounds in priority areas” by 2020.

Please visit the two-page factsheet on [Lead in Paint](#) for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

The issue of lead-containing paint and its exposure to kids is a global issue prevalent in global south countries.

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed
- Other:

2a) Please explain your response, including examples if possible.

.....

3) Which type of approach or measure would you see as appropriate to address Lead in Paint at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research
- Other:

3a) Please explain your response, including examples if possible.

.....

4) What factors prevent action/progress on addressing Lead in Paint in your country/ organization?

- Lack of technical capacity
- Lack of scientific knowledge
- Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors
- Difficulty with resource mobilization
- Lack of economically feasible green and sustainable alternatives
- Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?
- None, there are no factors preventing action or progress
- Other:

4a) Please explain your response, including examples if possible.

.....

5) Can you point to existing initiatives that could be replicated or scaled up at the international level?

Please share a weblink to the suggestion(s) if available.

.....

6) Which sectors/value chains need to be closely involved in developing solutions?

Please visit the two-page factsheet on [Lead in Paint](#) for more information on the topic. If you select "Other", please elaborate your response.

.....

8) What priority level do you attach to Lead in Paint for international action?

- Very high
- High
- Medium
- Low
- Very low

9) Is there any priority further work you would like to suggest at the national level? *

Please share a weblink to the suggestion(s) if available.

Improve the standards for lead-containing paints and strengthen regulatory oversight, providing relevant training and empowerment to law enforcement officers.

10) Is there any priority further work you would like to suggest at the regional level? *

Please share a weblink to the suggestion(s) if available.

Enhance research on alternative lead-free coatings.

Please select one of the options below *

Proceed to the next issue of concern - Nanotechnology and manufactured nanomaterials

Proceed to the "Conclusion" section to submit form and save responses

Nanotechnology and manufactured nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Despite multiple benefits associated with the technology, concerns have emerged regarding potential risks posed by manufactured nanomaterials to human health and the environment. In light of these concerns "Nanotechnology and manufactured nanomaterials" was designated an emerging policy issue at the second session of the ICCM in 2009. Stakeholders stressed the need to close knowledge gaps; to understand, avoid, reduce and manage risks; and to review the methods used for testing and assessing safety.

Please visit the two-page factsheet on [Nanotechnology and manufactured nanomaterials](#) for more information on the topic.

Would you like to provide responses on Nanotechnology and manufactured nanomaterials? *

If you select a "No" option, you will be taken to the next issue of concern, Per- and polyfluoroalkyl substances (PFASs).

Yes

No, I do not know enough about Nanotechnology and manufactured nanomaterials

No, Nanotechnology and manufactured nanomaterials are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

nanotechnology has not been widely developed in most countries yet. This is an issue with high scientific uncertainty with unclear potential stakeholders

Please answer questions as many questions below on as you can Nanotechnology and Manufactured Nanomaterials

While no definition has been internationally agreed upon, nanomaterials are commonly defined as materials having at least one external or internal dimension between 1 and 100 nm. Nanotechnology, i.e. the manipulation of matter at the nanometre scale, has rapidly developed in the past few decades and led to the widespread presence of nanomaterials in consumer products and industrial applications.

Proceed to the next issue of concern - Per- and polyfluoroalkyl substances (PFASs)

Proceed to the "Conclusion" section to submit form and save responses

[Per- and polyfluoroalkyl substances \(PFASs\) and the transition to safer alternatives](#)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. -CF₂-) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some "long-chain" PFASs. Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified "managing PFASs and the transition to safer alternatives" as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders "to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible"

Please visit the two-page factsheet on [Per- and polyfluoroalkyl substances \(PFASs\) and the transition to safer alternatives](#) for more information on the topic.

Would you like to provide responses on Per- and polyfluoroalkyl substances (PFASs)? *

If you select a "No" option, you will be taken to the Conclusion page.

Yes

No, I do not know enough about PFASs

No, PFASs are not relevant to my country or institution

No, other

If you selected "No, other" in the previous question, please elaborate here.

.....

Please answer questions as many questions below on as you can on Per- and polyfluoroalkyl substances (PFASs)

The PFAS family is composed of thousands of synthetic organic chemicals that contain at least one perfluorocarbon moiety (e.g. $-\text{CF}_2-$) in their molecular structures. These substances have been widely used in numerous commercial and consumer applications since the late 1940s.

Since the late 1990s and early 2000s, studies have been conducted to assess some “long-chain” PFASs . Their findings resulted in the listing of perfluorooctanesulfonic acid (PFOS) and its precursors under the Stockholm Convention in 2009. That same year, at ICCM2, SAICM stakeholders identified “managing PFASs and the transition to safer alternatives” as an issue of concern. A resolution by ICCM2 further invited intergovernmental organisations, governments and other stakeholders “to consider the development, facilitation and promotion in an open, transparent and inclusive manner of national and international stewardship programmes and regulatory approaches to reduce emissions and the content of relevant perfluorinated chemicals of concern in products and to work toward global elimination, where appropriate and technically feasible”

Please visit the two-page factsheet on [Per- and polyfluoroalkyl substances \(PFASs\) and the transition to safer alternatives](#) for more information on the topic.

Please answer the questions below that are relevant to your organization/ country/ region:

1) Do you agree with the assessment report that further international action is necessary? *

If you select "No", you are welcome to answer the questions below or you may proceed directly to question 9

- Yes
- No
- Don't know

1a) Please provide a brief explanation for your response. *

There is insufficient international research on PFASs, making it difficult to promote international actions and garner attention from various countries.

2) What types of international actions should be taken?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Legally binding
- Soft law
- Information sharing and awareness / Voluntary initiatives
- No international actions are needed
- Other:

2a) Please explain your response, including examples if possible.

.....

3) Which type of approach or measure would you see as appropriate to address PFASs at the international level?

Please refer to the [catalogue of international actions](#) prepared by UNEP for more information on available options

- Regulatory control measures
- Information based and enforcement measures: (such as Scientific and technical guidelines; Guidelines and tools for enforcement; Awareness tools (including of consumers))
- Options / guidance for economic instruments
- Voluntary measures and approaches: (such as Guidelines, principles and strategies)
- Measures supporting science based knowledge and research
- Other:

3a) Please explain your response, including examples if possible.

.....

4) What factors prevent action/progress on addressing PFASs in your country/ organization?

Lack of technical capacity

Lack of scientific knowledge

Difficulties in sharing knowledge and coordinating action among different stakeholders and across sectors

Difficulty with resource mobilization

Lack of economically feasible green and sustainable alternatives

Only coordinated international action can address the issue (e.g., due to transboundary effects, or prevalence of chemicals in international trade)?

None, there are no factors preventing action or progress

Other:

4a) Please explain your response, including examples if possible.

There is a lack of understanding about the mechanisms of harm, exposure scenarios, and safety of alternatives concerning PFASs. Moreover, more examples of translating academic knowledge into actionable measures are needed to promote the upscaling and transfer of actions.
.....

5) Can you point to existing initiatives that could be replicated or scaled up at the international level?

Please share a weblink to the suggestion(s) if available.
.....

6) Which sectors/value chains need to be closely involved in developing solutions?

Conclusion

Thank you for having reached this point in the form. You are now on the last page. Below are a final set of questions covering all 19 issues of concern.

GCO-II issues:

[Arsenic](#) | [Cadmium](#) | [Glyphosate](#) | [Lead](#) | [Microplastics](#) | [Neonicotinoids](#) | [Organotins](#) | [Phthalates](#) | [Polycyclic Aromatic Hydrocarbons \(PAHs\)](#) | [Triclosan](#) | [Bisphenol A \(BPA\)](#)

List of SAICM issues:

[Chemicals in products \(CiP\)](#) | [Endocrine-disrupting chemicals \(EDCs\)](#) | [Environmentally Persistent Pharmaceutical Pollutants \(EPPPs\)](#) | [Hazardous substances within the life cycle of electrical and electronic products \(HSLEEP\)](#) | [Highly hazardous pesticides \(HHPs\)](#) | [Lead in paint](#) | [Nanotechnology and manufactured nanomaterials](#) | [Per- and poly uoroalkyl substances \(PFASs\) and the transition to safer alternatives](#)

By clicking submit at the end of this page, it is possible to save your responses. The form for submitting written inputs will be available until **15/08/2023** COB

Central European time (CET) .

1) From the list of 19 issues, which issue(s) do you think is/are the most urgent? *

- Arsenic
- Bisphenol A (BPA)
- Cadmium
- Glyphosate
- Lead
- Microplastics
- Neonicotinoids
- Organotins
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Triclosan
- Chemicals in products (CiP)
- Endocrine-disrupting chemicals (EDCs)
- Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- Highly hazardous pesticides (HHPs)
- Lead in paint
- Nanotechnology and manufactured nanomaterials
- Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

1a) Please explain your response *

Chemicals in Products (CiP) is an umbrella topic that encompasses various issues of concern within this survey. It focuses on the chemicals released during different stages of a product's lifecycle, which also serves as the logical framework for addressing other related concerns.

2) From the list of 19 issues, which issue(s) do you think is/are the most urgent? *

- Arsenic
- Bisphenol A (BPA)
- Cadmium
- Glyphosate
- Lead
- Microplastics
- Neonicotinoids
- Organotins
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Triclosan
- Chemicals in products (CiP)
- Endocrine-disrupting chemicals (EDCs)
- Environmentally Persistent Pharmaceutical Pollutants (EPPPs)
- Hazardous substances within the life cycle of electrical and electronic products (HSLEEP)
- Highly hazardous pesticides (HHPs)
- Lead in paint
- Nanotechnology and manufactured nanomaterials
- Per- and polyfluoroalkyl substances (PFASs) and the transition to safer alternatives

2a) Please explain your response *

EDCs have challenged the linear exposure-to-pollution paradigm in the public and academic domains, posing threats to human health and biodiversity. Additionally, EDCs are significant negotiation points in ongoing plastic conventions.

3) Are there any other observations you wish to note?

Important notice!

If you click “submit” at the end of this page, your form will be saved. You can still return later to edit the form as you wish, at any time before the deadline which is **15 August 2023** Central European time (CET).

You will receive an e-mail, sent to the address you registered when starting the form. This will contain a link which you can use to return to the form to edit it. You can also share this link with a colleague, who can add extra information or change what you have already written. Indeed, we would welcome coordinated responses with views from the whole of your government or organization.

The e-mail will also have a summary of the information which you have saved.

You, or any colleague who can edit the form, will have the chance each time the form is edited to say if your submission is final, by ticking the relevant box – see below. If you tick this, that will be considered to be the final edited version of the form and future edits will not be counted. Or you can say that you wish to return to the form by ticking the other box.

Please note that all forms will be regarded as final on the closing date for the call for written inputs – 15 August COB Central European time – whether or not you have ticked the box.

All final forms will be published (apart from personal information about the person submitting the form).

4) Is this your final submission of the form? *

After 15 August 2023 COB Central European time, no further edits can be made to the form. After this date, all pending forms will be considered as final submissions.

Yes. This is the FINAL submission of written responses, no further edits will be made later

No. This is NOT the final submission, further edits will be made later.
