MANUAL FOR MONITORING OF OIL AND PETROLEUM
HYDROCARBONS IN MARINE WATERS
AND ON BEACHES

for use in the

IOC/WMO/UNEP Pilot Project on Baseline Studies and Monitoring of Oil
and Petroleum Hydrocarbons in Marine Waters (MED-I)

as part of the

Co-ordinated Mediterranean Pollution
Monitoring and Research Programme

TABLE OF CONTENTS

	<u>Page</u>
OBSERVATION OF OIL SLICKS AND OTHER FLOATING POLLUTANTS	1
1. Methods of observation	1
2. Instructions for completing the form	1
3. Distinguishing between oil slicks and natural films	3
PROCEDURES FOR THE SAMPLING AND REPORTING OF PARTICULATE PETROLEUM RESIDUES (TAR BALLS)	6
1. Sampling devices	6
2. Sampling procedure	6
3. Preservation of samples	7
4. Recording of samples	7
5. Analysis procedures	7
6. Weight of the tar	7
TAR SAMPLING ON BEACHES	9
1. Selection of area	9
2. Size of sampling zone	9
3. Sampling procedures	9
4. Sample analysis	9
5. Sample recording	10
6. Prevailing wind direction	10
PROCEDURES FOR SAMPLING, ANALYSIS AND REPORTING PETROLEUM HYDROCARBONS DISSOLVED AND DISPERSED IN SEA WATER	12
1. Sampling bottle	12
2. Sampling	13
3. Sample preservation	13
4. Recording of samples	13
5. Processing and analysis of samples	14
6. Handling of data	15
7. Procedures for a clean-up of the extract	16
8. Calibration and intercomparison	19

1. THE ROLE OF BIOLOGICAL ACCUMULATORS IN MONITORING PROGRAMMES	1
1.1 Introduction	1
1.2 Definitions	1
1.3 Bioaccumulation and Toxicity	2
1.4 Reasons for Using Bioaccumulators	3
1.5 Difficulties Inherent in Using Bioaccumulators	3
1.6 Requirements of a Good Biological Accumulator	4
1.7 Present Studies and the Lessons Learnt	5
1.8 Intercalibration	6
1.9 Species Identification	6
1.10 Data Required in Reporting Results	6
1.11 References	7
2. MONITORING OF RADIONUCLIDES	8
2.1 Introduction	8
2.2 Inputs and Routes of Entry	8
2.3 Analytical Methods	10
2.3.1 Sample preparation	10
2.3.2 Radiometrics	10
2.4 Bioaccumulation	11
2.4.1 General aspects	11
2.4.2 Specific examples	15
2.5 Assessment of Results	21
2.6 References	22
3. MONITORING OF TRACE ELEMENTS OTHER THAN RADIONUCLIDES	27
3.1 Introduction	27
3.2 Inputs	27
3.2.1 Natural sources	27
3.2.2 Man-made sources	27
3.3 Trace Elements in the Marine Environment	28
3.3.1 Physical and chemical distribution	28
3.3.2 Biological transfer and transformation	28
3.4 Accumulation of Trace Elements by Marine Organisms	29
3.4.1 Environmental and biological factors	29
3.4.2 Uptake and loss of trace elements by marine organisms	30
3.5 Criteria for Selection of Bioaccumulators for Trace Elements	31
3.5.1 Summary of data by element and organism	31
3.5.2 Role of bioaccumulators in assessing toxic trace elements	32
3.6 Analytical Procedures	33
3.6.1 Sampling recommendations	33
3.6.2 Analytical techniques including preparation of samples	33
3.7 Reporting of Results	34
3.8 References	34
4. MONITORING OF PETROLEUM HYDROCARBONS	38
4.1 Inputs	38
4.2 Analytical Methods	38
4.3 Biological Transfer and Transformation Processes - Distribution	38
4.3.1 Uptake	38
4.3.2 Bioaccumulation	40
4.3.3 Biogenic hydrocarbons	40
4.3.4 Hydrocarbon metabolism	40
4.3.5 Relating analytical studies to bioaccumulation from water and/or food	43

	<u>Page</u>
4.4 Bioaccumulation of Petroleum Hydrocarbons - Selection of Organisms	44
4.5 References	44
5. MONITORING OF CHLORINATED HYDROCARBONS	48
5.1 Introduction	48
5.2 Inputs	48
5.2.1 Production	48
5.2.2 Transport	48
5.3 Analytical Procedures	48
5.4 Distribution	49
5.4.1 Uptake	49
5.4.2 Elimination	49
5.4.3 Factors affecting storage	49
5.4.4 Metabolism	50
5.4.5 Interactions among group members	50
5.5 Species Selection	52
5.6 References	54
6. MISCELLANEOUS SUBSTANCES	58
6.1 Introduction	58
6.2 Halogen Compounds	58
6.2.1 Chlorinated aromatics	58
6.2.2 Chlorinated aliphatics	58
6.2.3 Chlorinated dibenzo-p-dioxins	58
6.2.4 Pentachlorophenol and lower homologues	59
6.2.5 Unidentified halogen compounds	59
6.3 Halogen-free Compounds	59
6.4 Laboratory Experiments	59
6.5 Selection of Substances to be Investigated	60
6.6 General Comments	60
6.7 References	60
7. A MATRIX TABLE	62
7.1 Introduction	62
7.2 Description of the Matrix Table and its Limitations	62
8. PILOT STUDY ON MONITORING BIOACCUMULATION IN MARINE ORGANISMS	64
8.1 Introduction	64
8.2 Preparational Phase	64
8.2.1 Literature review	64
8.2.2 Survey of research capabilities	64
8.2.3 Selection of species for monitoring	65
8.2.4 Selection of contaminants to be monitored	66
8.2.5 Summarize the sources and types of contaminants entering the system	66
8.2.6 Intercalibration	66
8.2.7 Sampling procedure	66
8.2.8 Coordination of participating laboratories	66
8.3 Screening Phase	67
8.3.1 Laboratory studies	67
8.3.2 Field studies	67
8.3.3 Evaluation	67
8.4 Operational Phase	68
8.4.1 Data collection and evaluation	68
8.4.2 Coordination and emergency procedures	68
8.5 References	68

United Nations Environment Programme

FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS

C O N T E N T S

	<u>Page</u>
1. INTRODUCTION	1
2. IDENTIFICATION OF ORGANISMS TO BE MONITORED	1
2.1 Precautions recommended for correct identification	3
2.2 Identification of the species of first priority	3
2.3 Identification of other species	4
2.4 Identification of phyto- and zooplankton	4
3. SAMPLING SITES	39
4. SAMPLING PROCEDURES	39
4.1 Sampling of mussels	41
4.2 Sampling of shrimps for analyses of chlorinated hydrocarbons	43
4.3 Sampling of shore crabs for analyses of chlorinated hydrocarbons	44
4.4 Sampling of <u>Mytilus barbatus</u>	44
4.5 Sampling of tuna and swordfish	45
4.6 Reporting of biological data and sampling procedure	46
5. SAMPLE PREPARATION	48
5.1 Sample preparation for analyses of metals	48
5.1.1 Selection and cleaning of instruments and materials	48
5.1.2 Sample preparation for deep-freezer storage	49
5.1.3 Sample preparation of <u>Mytilus</u>	50
5.1.4 Sample preparation of <u>Mullus</u>	52
5.1.5 Sample preparation of tuna and swordfish	56
5.2 Sample preparation for analyses of chlorinated hydrocarbons	56
5.2.1 Selection and cleaning of instruments and materials	56
5.2.2 Sample preparation for deep-freezer storage	57
5.2.3 Sample preparation of <u>Mytilus</u>	57
5.2.4 Sample preparation of <u>Parapenaeus</u>	58
5.2.5 Sample preparation of <u>Carcinus</u>	59
5.2.6 Sample preparation of <u>Mullus</u>	59
5.3 Sample preparation for analyses of metals and Chl-HCs of other marine organisms	60
6. ANALYTICAL PROCEDURES	61
6.1 Contamination of glassware and its avoidance	61
6.2 Determination of dry weight in biological material	62
6.3 Destruction of organic matter in biological samples	63
6.3.1 Explosion hazard	64
6.3.2 Liquid pressure decomposition of organic matter for metals	65
6.3.2.1 Wet combustion in closed Teflon crucibles	66
6.3.2.2 Wet combustion in closed plastic bottles	67
6.4 Atomic Absorption Spectrophotometry	69
6.4.1 Determination of Hg	73
6.4.1.1 Determination of total Hg	73
6.4.1.1.1 Flameless Hg-determination in a closed system (Munns and Holland, 1971)	75
6.4.1.1.2 Flameless Hg-determination in an open system (Parker, 1972)	77
6.4.1.2 Determination of inorganic and total Hg without wet combustion	78
6.4.2 Determination of cadmium	81

6.4.3	Determination of total arsenic	82
6.4.4	Determination of total selenium	84
6.4.5	Determination of total copper	84
6.4.6	Determination of total zinc	85
6.4.7	Determination of total manganese	85
6.4.8	Determination of total chromium	85
6.4.9	Determination of total lead	86
6.5	Gas chromatographic analysis of chlorinated hydrocarbons	86
6.5.1	Cleaning of glassware, instruments and reagents	89
6.5.2	Pretreatment	89
6.6	Gas chromatographic analysis of methyl mercury	95

MANUAL OF METHODS IN AQUATIC ENVIRONMENT RESEARCH

Part 4 – Bases for Selecting Biological Tests to Evaluate Marine Pollution

with the cooperation of the
United Nations Environment Programme

CONTENTS

	<u>Page</u>
1. INTRODUCTION	1
1.1 Scope of the Manual	1
1.2 Biological and Chemical Approaches to Discharge Regulations	2
1.3 Other Working Parties with Related Terms of Reference	2
2. SOURCES AND EFFECTS OF MARINE POLLUTION	2
2.1 Sources	2
2.1.1 Fixed-point sources	2
2.1.2 Variable location/random-point sources	3
2.1.3 Diffuse sources	3
2.2 Effects	3
3. PURPOSE OF TESTS	3
3.1 Screening Tests	3
3.2 Regulatory Tests	4
3.3 Tests to Establish Water Quality Criteria	4
3.4 Effluent Monitoring Tests	4
3.5 Tests for Monitoring Discharge Areas	4
3.6 Tests to Protect Higher Trophic Levels	4
3.7 Organoleptic Tests	4
3.8 Tests for Biostimulation	4
4. TYPES OF TEST PROCEDURES	5
4.1 Direct Response Tests	5
4.1.1 Toxicity tests	5
4.1.2 Biostimulation tests	6
4.1.3 Repellence bioassay	6
4.1.4 Tests for bioaccumulation and trophic accumulation	6
4.1.5 Ecological surveys	7
4.2 Indirect Response Tests	7
4.2.1 Organoleptic tests	7
4.2.2 Ecological survey	7
4.2.3 Biostimulation tests	8
4.3 Recommended References for Test Procedures	8
4.4 Types of Procedures to be Used for Specific Purposes	9
5. SPECIFIC USES OF THE VARIOUS TEST PROCEDURES FOR POLLUTION IDENTIFICATION, EVALUATION AND CONTROL	9
5.1 Fixed-point Discharge	12
5.2 Variable location/Random-point Discharge	12
5.3 Diffuse Pollution	13
6. SELECTION OF TEST ORGANISMS	13
6.1 General Considerations	13
6.2 Organisms for Screening and Regulatory Tests	13
6.3 Organisms for Other Bioassays	14
6.4 Special Characteristics of Some Test Groups	15
6.5 Selected Bibliography	15

	<u>Page</u>
7. SALINITY OF TEST SOLUTIONS	16
8. INTERPRETATION OF RESULTS	17
8.1 General Aspects	17
8.2 Ecological Significance of Test Results	17
8.3 Measurement of Toxicity	18
8.4 Application Factors	19
8.5 Concentration Versus Amount of Toxicants	19
9. REFERENCES	19

Appendix 2: Calculation and Use of the Toxicity Emission Rate	27
Appendix 3: Identification of Research Needs	30

MANUAL ON SELECTED BIOASSAY TECHNIQUES

This manual is under preparation in co-operation with the Food and Agriculture Organization of the United Nations (FAO).

Tentative contents

1. Aim of Manual
2. Short review of sources and effects of marine pollution
 - 2.1 Pollution sources
 - 2.1.1 Fixed-point sources
 - 2.1.2 Sources with variable locations
 - 2.1.3 Diffused sources
 - 2.2 Effects
3. Purposes of tests
 - 3.1 Screening tests
 - 3.2 Regulatory tests
 - 3.3 Tests to establish water quality criteria
 - 3.4 Test to protect higher trophic levels
 - 3.5 Tests for biostimulation
 - 3.6 Various tests
4. Types of test procedures
 - 4.1 General data
 - 4.1.1 Types of tests
 - 4.1.2 Direct response tests
 - 4.1.3 Indirect response tests
 - 4.2 Experimental procedures
 - 4.2.1 Selection of organisms
 - 4.2.2 Experimental laboratory
 - 4.2.3 Experimental medium
 - 4.2.4 Experimental equipment
 - 4.2.5 Introduction of pollutants

4.3 Different types of test

4.3.1 Lethality tests

4.3.2 Sublethality tests

4.3.3 Other tests

5. Evaluation and presentation of results

MANUAL FOR INVESTIGATIONS OF POLLUTION INDUCED MODIFICATIONS
OF MARINE ECOSYSTEMS

This manual is under preparation in co-operation with the Food and Agriculture Organization of the United Nations (FAO).

Tentative contents

1. Introduction to the Basic Concepts of Marine Ecology
 - 1.1 Evaluation, structure and functions of an ecosystem
 - 1.2 Physical conditions in marine ecosystems and its limitations
 - 1.3 Marine biota and dynamics of their populations
 - 1.4 Marine communities, their dynamic structures, biocenotic successions and homeostatic potentials
 - 1.5 Productivity of marine communities, biogeochemical cycling and overall metabolism of ecosystems

2. General Characteristics of Mediterranean Ecosystems
 - 2.1 Pelagic ecosystem and its different facies as developed in open, "oceanic" conditions, in subtropic and temperate neritic zones and in particular formations such as lagoons and estuaries
 - 2.2 Coastal benthic communities (littoral), their vertical zonations, structure and dynamics as developed at hard and soft bottoms of the coastal sea, lagoons and estuaries
 - 2.3 Bathyal and deep-sea benthic communities
 - 2.4 Major types of nektonic communities

3. Pollution as a Stress Factor in Marine Ecosystems
 - 3.1 Sewage, biodegradable industrial effluents and agricultural fertilizers
 - 3.2 Hydrocarbons
 - 3.3 Potentially toxic effluents of some typical industries
 - 3.4 Thermal pollution
 - 3.5 Inert suspensions

4. General Methodology of Pollution - Oriented Ecological Investigations

5. Research Methods and Techniques

5.1 Basic environmental conditions of investigated area

5.2 Pollutants

5.3 Investigations of communities

5.3.1 Pelagic communities

5.3.2 Benthic communities

5.4 Interpretation of results

Preface	
1. Background	1
2. Objectives	1
3. Scope of activity	2
4. Area and problem identification	3
4.1 Provision of maps, scale modifications	3
4.2 Area assessment, check list	6
4.3 Earlier coastal pollution studies	7
4.4 Problem assessment	7
4.5 Area and problem assessment, initial report	7
5. Beach surveillance	9
5.1 General	9
5.2 Surveillance maps, recording of results	9
5.3 Observation points and frequency	9
6. Minimum monitoring	9
6.1 General	9
6.2 Recreational waters	16
6.3 Shellfish areas	19
6.4 Pollution sources	20
7. Extended monitoring	22
7.1 Pathogens and indicators	22
7.2 Monitoring media	22
7.3 Characteristics of certain microbiological monitors	23
7.4 Choice of organisms for extended monitoring	28
7.5 Recreational water	29
7.6 Pollution-source monitoring	30
8. Meteorological and hydrographical observations	31
8.1 General	31
8.2 Wind and air temperature observations	31
8.3 Precipitation observations	31
8.4 Tidal observations	31
8.5 Observation of water level variations	31
8.6 Surface drift observations and dye techniques	31
8.7 Observations of currents by drogue	33
8.8 Observation of currents by current meter	33
8.9 Wave observations	33
8.10 Salinity observations	33
8.11 Temperature observations	33
8.12 Transparency	38
8.13 Oxygen determination	38
8.14 Identification of samples	38
8.15 Navigation and positioning	38
8.16 Equipment and supplies	38
9. Microbiological sampling	40
9.1 General	40
9.2 Sterile sample containers	40
9.3 Sterile sampling and handling	40
9.4 Storage and transportation	40

MANUAL OF METHODS IN AQUATIC ENVIRONMENT RESEARCH

PART 5: STATISTICAL TESTS

This manual was prepared in co-operation with the Food and Agriculture Organization of the United Nations (FAO).

CONTENTS

	<u>Page</u>
1. TESTS FOR POLLUTION MONITORING PROGRAMMES	1
1.1 Introduction	1
1.2 Population Parameters	1
1.3 Simple Sample Statistics	3
1.4 Composite Sample Statistics	4
1.4.1 One-factor models	5
1.4.2 Two-factor nested model	8
1.4 Regression of Covariance Models	9
1.6 The Problem of the Sample Size	11
1.6.1 One sample	11
1.6.2 Two samples	12
1.7 Examples	14
1.7.1 Example of a one-factor model	17
1.7.2 Example of a regression test	18
1.7.3 Example of a two-factor nested model with the determination of the variance components for individuals and pretreatment	19
1.7.4 Example of a two-factor nested model with the determination of the variance components for samples and individuals	20
1.7.5 Example of a covariance model	21
1.7.6 Example of a comparison of three regression lines	23
1.7.7 Example of a set-up of a (quality) control plan	27
1.7.8 Example of the determination of the sample sizes in an experiment with two samples	29
2. TESTS FOR BIOLOGICAL POLLUTION RESEARCH	31
2.1 Introduction	31
2.1.1 Hypotheses, tests and errors	31
2.1.2 Confidence intervals and tests	35
2.2 Hypotheses about Frequencies	36
2.2.1 Test if the frequency π of a character in a population equals π_0 or it is larger	36
2.2.2 Test if the frequency π of a character in a population equals π_0 or it is smaller	36
2.2.3 Comparison of two frequencies: test of independence (both margins fixed)	37
2.2.4 Comparison of c frequencies: test of homogeneity (one margin fixed)	38
2.2.5 Comparison of an observed with a theoretical distribution: tests of goodness of fit	40
2.2.6 Comparison of an observed with the normal distribution	41
2.2.6.1 Probit analysis	41
2.2.6.2 Normality tests	41
2.2.7 Comparison of two distributions	45
2.2.8 A combination of type I errors	48
2.3 Hypotheses about Location Measures	46
2.3.1 Test whether the mean μ , of an approximately normal population with an unknown variance, equals a preassigned value μ_0	48
2.3.2 Comparison of two means sampled from approximately normal populations with unknown variances	49
2.3.3 Comparison of the location of two populations with any distribution	51
2.3.4 Comparison of the means of c samples	51
2.3.5 Multiple <i>a posteriori</i> comparison	53

	<u>Page</u>
2.4 Hypotheses about Variances	55
2.4.1 Test whether the variance σ^2 of an approximately normal population equals the preassigned value σ_0^2	55
2.4.2 Comparison of two variances of approximately normal populations	56
2.4.3 Comparison of c variances of approximately normal populations: tests of homoscedasticity	56
2.4.4 Comparison of c variances of any distribution	56
2.5 Hypotheses about the Interdependence (Correlation) and the Dependence (Regression) in Bivariate Variables	56
2.5.1 Test of no correlation in a bivariate normal population	56
2.5.2 Test if the correlation coefficient ρ of a bivariate normal population equals a preassigned value ρ_0	59
2.5.3 Comparison of two correlation coefficients of bivariate normal populations	59
2.5.4 Test of no correlation in bivariate populations with any distribution	60
2.5.5 Hypotheses about regression coefficients of normal bivariate populations	62
2.6 Other Tests	63
2.6.1 Test for outliers	63
2.6.2 Tests for randomness	64
2.7 Examples	65
2.7.1 Examples of tests about frequencies	66
2.7.2 Examples of tests about location measures	78
2.7.3 Examples of tests about variances	87
2.7.4 Examples of tests about regression and correlation	88
2.7.5 Examples of miscellaneous tests	90
